FOREWORD

'McKERROW'S DEVICES' is the third of the Bibliographical Society's publications to be reprinted by photo-offset-lithography for sale to the public as well as to members of the Society. Like its two companions, the *Short-title Catalogue* and Duff's *Century*, it has become an indispensable work of reference for students of early English books. Although it is over 35 years since it first appeared and although much additional information about the use of the various devices has been accumulated, it remains a remarkably complete survey of the field, very few additions having been found. The appearance of this reprint does not mean that the Council of the Bibliographical Society has abandoned the intention of bringing out a revised edition at the appropriate time. Corrections and additions are always gratefully received and carefully filed for future use.

PREFACE

THE present volume is intended to contain an account of all marks and devices used by printers and publishers resident in England and Scotland from the time of the introduction of printing until 1640, and also of all wood-cut borders and ornaments containing the owner's device or initials used here during the period. The de-

vices of foreign printers of books for the English market are not included, nor are those of one or two foreign firms trading in England, such as the Birckmans, whose business seems rather to have been of the nature of an agency than independent, and who used the device of their principal establishment on the Continent.

That the collection should be complete will not, I hope, be expected, for though much work bearing upon the subject has already been done, this is the first attempt to deal with it as a whole. Several devices are only known from their occurrence in a single book, and it is probable that there still remain a number which have not been recorded. Even approximate completeness in work of this kind can only be arrived at in the course of time and by the assistance of collectors and librarians.

Indeed, the task is one that should properly have been attempted

by a librarian. It is, I confess, a source of regret to me that the work could have been far more adequately performed, in perhaps a tenth of the time that I have spent upon it, by any one having direct access to a large collection of books of the period, and able to make a systematic search for unrecorded devices in those less important books and pamphlets which have never been fully described. Were it not for a short period of office as Deputy Librarian at Trinity College, Cambridge, during the course of the work, it would be yet more imperfect than it is; and the great amount of new material which I was then able to add in the comparatively few hours that I was able to devote to the search, has made me realize very clearly how much still remains to be done. The book is indeed but a beginning, something for those with better opportunities to complete.

What rendered it possible for me to attempt this work at all was the existence at the British Museum of the two great collections of title-pages and fragments known as the Bagford and Ames Collections, and I gladly record my debt to the much-abused worthies who gathered them together. The Bagford Collection is the larger and the better known, by reason of the number and interest of the fragments from rare books which it contains, but for the purpose of the present work that of Ames has proved by far the more useful. The title-pages in this collection are as a rule complete, most of them are in good condition, and most important of all for work of this kind, they are arranged in chronological order. The Bagford Collection, on the other hand, is almost entirely without arrangement, though traces of a plan—indeed, of several different plans—may be discerned here and there; in a great number of cases the device or imprint alone is preserved and there is no means of discovering from what book it was taken, and the fragments are mutilated in every way and often so badly or carelessly stuck into the scrapbooks that even the whole information that they might afford is not available.

Between them these two collections have supplied a large part of my material. Next to these in usefulness have been, for the earlier part, Herbert's edition of Ames' *Typographical Antiquities* and, for the later, Mr. Sayle's *Catalogue of English Books in the Cambridge University Library*. Both these books have proved in different ways of the highest value. Herbert does not always give the precise details desired, but he had the rare virtue of not saying more than he knew; and so is never misleading. His work, of course, stops at 1600 and it is from this point that Mr. Sayle's *Catalogue*, in the earlier portion of which—to about 1570—devices are only occasionally mentioned, has been of the greatest help.

In the course of the work I have been compelled to trouble many, both friends and strangers, with inquiries and requests for assistance, and I may say that in no single instance have I met with anything but the promptest and most courteous reply. All information for which I asked has been given me, and every request for permission to reproduce a device has been granted. To all who have helped me I offer my sincere thanks.

The Society is indebted to Lord Newton for permission to reproduce the earliest known print of Caxton's mark (No. 1); to Viscount Clifden for the device used by James Gaver (No. 90); to Mr. Christie-Miller for Nos. 172, 176; to Mr. E. F. Bosanquet for Nos. 74 β , 218; to the Master and Fellows of Trinity College, Cambridge, for Nos. 45, 46 β , 57, 73, 200, 235, 267, 276, 307, 343, 350; to the Warden and Fellows of New College, Oxford, for No. 34 α ; to the Dean and Chapter of St. Paul's Cathedral for No. 83 α ; to the Advocates' Library, Edinburgh, for No. 29; to the Bodleian Library for Nos. 7, 12, 56, 58, 64, 72, 130, 136, 137, 144 α , 161, 171, 173, 178, 201, 205, 209, 224, 319, 331; to Cambridge University Library for Nos. 87, 131, 135, 162, 255, 386; to the John Rylands Library for Nos. 42, 84 β , 115, 144 β , 158; and to the New York Public Library for No. 120.

Most of the other blocks in the volume—about seven-eighths

of the whole number—have been reproduced from books in the British Museum, to the Trustees and Staff of which the Society are under great obligation.

In this connection special thanks are due for information and assistance to the Librarians of the several Libraries mentioned and more particularly to Dr. W. W. Greg at Trinity College, Cambridge, Mr. R. S. Rait at New College, Oxford, the Revd. W. P. Besley of St. Paul's Cathedral Library, Mr. W. K. Dickson, Keeper of the Advocates' Library, Mr. F. Madan of the Bodleian, Mr. C. Sayle at the University Library, Cambridge, Mr. H. Guppy of the John Rylands Library, Mr. W. Eames of the Public Library, New York, and Mr. H. Collmann, Librarian to Mr. Christie-Miller.

The proofs of the early part of the work—to 1557—have been read, to their very great advantage, by Mr. E. Gordon Duff, who also gave me a large number of notes on the early devices and has at all times been ready with his help. Indeed, taking into consideration the great amount of assistance that I have derived from Mr. Duff's work in the *Handlists of English Printers* and elsewhere, it is not too much to say that the bulk of the information which I have collected as to the devices of the earlier printers is directly due to him.

Mr. H. G. Aldis very kindly looked through the devices of the Scottish Printers and sent me a number of most useful notes.

I am also indebted for information as to particular devices to Mr. G. J. Gray, Mr. H. R. Plomer, and Mr. R. Steele. More particularly I owe gratitude to Mr. A. W. Pollard, who has read the proofs of the whole book, and helped me with many valuable suggestions.

INTRODUCTION

INTERESTING as it might be to investigate the early history of the use by printers and publishers of special ornaments or designs in order to distinguish their work from that of others, the task would be by no means an easy or a brief one, and it is fortunate that there is no need to embark upon it here. So far as the

English printing trade is concerned the origin of the practice is clear enough: it came from the Continent, where devices had been employed by many printers since the first appearance of the Fust-Schoeffer mark in the Bible of 1462. The earliest device used in England, that of the St. Albans Press, does not date from before 1485, the second, Caxton's, was first used in 1487 or 1488, and up to the end of the fifteenth century we have only eleven separate devices in all.

Leaving, then, to the expert in foreign incunabula the question of how and why devices came into use in printed books, we may turn at once to the matter which more immediately concerns us, the devices of our native printers. And first it would be well if we could form a clear idea of what a device is. It may at least be

expected that I should offer some definition by which we may decide what may fairly be admitted into a book upon the subject. But of all problems with which one meets in the study of devices, it is surely the most difficult to say what a device is. I confess to some envy of those who can distinguish at a glance between a device and a mere ornament, or an emblem, or a cut, as the case may be; for I certainly have not yet learnt to do so. There are, of course, things which no one would hesitate to class as devices, for example a block representing a printer's sign or his mark; while certain of the commoner metal ornaments can at once be dismissed as nothing more than ornaments, though even some of these may at times have a claim to the rank of devices when they happen to be used by a printer who had as his sign the object that they represent. But unfortunately a great number of blocks found on title-pages or in colophons do not belong to either of the two classes, and it is with these that the difficulty arises.

So far as I am aware, only one definition of a device has been attempted. This is to be found in Mr. F. Madan's memorandum on *Degressive Bibliography* printed in the Society's *Transactions*, vol. ix. Unfortunately, however, this is intended as a definition of devices in general, not of those of printers or publishers alone, and is therefore too widely inclusive for our purpose, while on the other hand it would exclude many things that are customarily regarded as falling within our subject. We must therefore attempt a definition for ourselves.

As I have said, the matter is a difficult one, and it will, I think, be best dealt with by taking first a somewhat narrow definition and afterwards adding certain classes of objects which are not covered by it but are used in a similar way. Let us say, then, in the first place that any picture, design, or ornament (not being an initial letter) found on a title-page, final leaf, or in any other conspicuous place in a book, and having an obvious reference to the sign at which the printer or publisher of the book carried on business, or

to the name of either of them, or including the arms or crest of either of them, is—whatever its origin—that printer's or publisher's device.

I say 'whatever its origin' because I do not see how we can logically exclude things that were not originally intended as devices. Thus if a man who works at the sign of the Sun uses a cut of the sun in his title-pages or at the end of his books, that seems to be certainly his device, even though it may be merely an old wood-cut, perhaps out of some work on astronomy, which he happened to have in his possession, and even though if this same cut had been used by a man with a different sign, no one would ever dream of counting it. Thus the cut of the sun used by James Gaver (No. 90) should, I think, rank as a device though it first appeared as an illustration in the work of another printer. Similarly the little swan (No. 303) must be included on the strength of its appearance on the title-page of books printed by Valentine Symmes at a time when he was trading at the sign of the White Swan, though it seems hardly likely that such an insignificant ornament would have been specially cut for use as a device.

If we had to deal with printers up to 1557 alone the rough definition that I have given would cover almost, if not quite, all cases. But when we pass that date there is a great change. The emblematic form of device begins to predominate largely over that which had reference to the sign, and the emblem chosen evidently depended on the mere fancy of the printer or publisher who chose it. Thus to take one or two of the best known devices, Vautrollier and, after him, Field used an anchor with the motto 'Anchora Spei,' but there seems no indication that Vautrollier ever used an anchor as his sign, and Field's was the Splayed Eagle. Reyner Wolfe, who worked at the sign of the Brazen Serpent, often used this as a device, but in many of his books had the Tree of Charity, which had nothing whatever to do with his sign. John Wolfe commonly used a fleur-de-lis, but it is not stated that this was ever his sign. William Leake dwelt successively at the Crane, the

White Greyhound, and the Holy Ghost, but the device that he used represented a winged death-head (No. 341). Many more examples could of course be given, but these will suffice to show that a connection between the sign and the device is not always to be looked for, and we must enlarge our definition so that it includes any emblematic cut commonly used by a printer or publisher, provided that it has no apparent reference to the subject-matter or author of the book in which it appears. Here of course we are at once in another difficulty, for we have to interpret the word 'commonly,' and may be asked whether a device is any less a device because it only happens to occur once or twice. But, as I have said, it is hard to draw up a satisfactory definition; we must be content to regard certain blocks as lying on the border line and include or reject them as we please.

There is, however, one troublesome question which must be referred to in passing. Some printers and publishers, including several of the smaller houses, instead of having a device specially cut for them, made common use of what cannot properly be regarded as more than an ornament, such as a rose, a mermaid, a monster's mask, a cherub's head or the like. Most of these were probably metal, and may have been cast, and it is therefore impossible to tell whether there was one block or several. There is at any rate no reason for denying that two or more printers *may* have possessed similar casts.

As examples of such ornament-devices we may take Nos. 259, 332, and 333. The first of these, a two-tailed mermaid blowing a pair of trumpets at the same time, was used at Cambridge by the elder John Legate from 1590 to 1598 and afterwards at London from 1615 to 1632. The others are a crowned rose used in two sizes from about 1598 to 1603 by Valentine Symmes. In neither case has the object represented anything to do with the sign of the house, and either of them may be simply a common ornament bought from a type-founder—the mermaid perhaps a foreign one. That I do not

happen to have found either of these in simultaneous use by two or more printers is no evidence that they were not.

What is to be done with things like these? Should we include them in a book of devices or should we omit them? I have little hesitation in saying that if we are considering devices in the abstract, such blocks cannot properly be counted among them; but at the same time it seems to me quite certain that as a matter of convenience and utility, the more of them that we include in a collection of facsimiles the more useful it will be. It is just the books issued from the smaller printing and publishing houses that as a rule offer the greatest difficulties when we wish to trace their origin, and though the presence of an ornament such as those to which I refer cannot alone prove from what house the book came, yet the knowledge that such and such a printer was using that block—or at least one exactly similar—at a particular date may often put us on the right track.

The chief objects which we find on title-pages, and which clearly ought *not* to be considered as printers' devices are cuts or emblems appropriate to the particular book in which they appear, or referring to the author of it: though as we shall see presently there are a few cases of emblems cut for a particular book being afterwards used by the printer of the book or by a later owner as his own device.

Secondly, coats of arms and crests of the author or his patron are not to be regarded as printers' devices, though here again we must be careful that the arms are not used as being those of the *printer's* patron. For example, during the last two or three years of his life Bynneman frequently used as his device a small cut of Sir Christopher Hatton's crest, a hind (No. 229). He, however, also possessed a larger cut of the same crest, which is used, so far as I know, only in a single book of Gabriel Harvey's printed by him. As this book consists of several parts, each dedicated to a different nobleman, and as each part has the nobleman's arms upon

it, we must in this case regard Sir Christopher Hatton's crest as a dedication cut and not as the printer's device. Thus two cuts exactly similar except in size may be, one a printer's device, the other not.

Cuts of the royal arms present a difficulty. It is hard to see why, in the case of a printer under royal patronage, the royal arms are not as much his device as the arms of any other patron would be; and it has certainly been customary to consider, for example, the tiger's head, the crest of Sir Francis Walsingham, as Barker's device, and the wyvern, the Earl of Cumberland's, as that of Aggas. There would therefore, I think, be some justification for counting these arms as a device in the case of the royal printers, but not otherwise. In practice, however, there is considerable difficulty in doing this, on account of the men who had privileges for particular classes of books, and used the royal arms in these. It seemed so difficult to know where to draw the line between inclusion and omission that I have thought it better to omit them all, more especially as most of them have recently been reproduced in the Catalogue of Proclamations in the *Bibliotheca Lindesiana*.

It will be readily understood that it is not always an easy task to distinguish between emblems of the author of a book, or referring to the work itself, and those of a publisher. If we can find a particular block on several works by the same writer, but issued by different houses, we of course can at once conclude that it is the author's, and need trouble no more about it; but only rarely can we do this. As an example of devices which certainly at first sight might be thought to belong to the printer or publisher, we may take the goat's head which appears on the title-page of the surgeon Walter Cary's *Hammer for the Stone*. This, however, seems to refer to the fact that the quintessence in praise of which his book was written was manufactured from the blood of a goat. Two devices which have every appearance of being those of a bookseller were used by John Hester, a physician or apothecary, in his translation from J. Du Chesne, entitled *A Brief Answer of Joseph*

Quercetanus, 1591, with a second part, *The True and Perfect Spagerike Preparation of Minerals*.¹ These consist of Hester's monogram in a frame, the larger one with his initials I. H. at the sides. There seems no evidence that John Hester was a bookseller, for what has sometimes been read as a statement that the book is to be sold by him, evidently refers not to the book, but to certain drugs described in it, and we must therefore treat these as author's devices and exclude them.

Some devices indeed that I have admitted into this collection may be of the same class. I have great doubts about two which are found chiefly in song-books (Nos. 305, 322), and also about one in Selden's *Duello* (No. 369), and I should not be surprised to learn that one or two others belong to the authors, not to the 'mechanical producers' of the books in which they occur. But enough has been said to warn readers of the difficulty of drawing up a satisfactory definition of printer's devices, or even, if we could do so, of holding to it consistently. We may now pass to the subject of the devices themselves.

The devices used in this country are so various in origin and in quality of workmanship that it seems useless to attempt any historical treatment of them. To anyone who glances through the facsimiles given in this volume a certain more or less gradual change in character in the devices, both in design and execution, will be evident. It cannot, however, be called a development, for in artistic qualities the later ones are by no means superior to the earlier; it is rather the abandonment of one set of models for another, a mere change of fashion. Here and there at all periods we may find a design that is not without merit, but it must be confessed with regret that in this, as in most other respects, our printers, during the period with which we have to deal, were as a rule far behind those of the Continent. Instead, therefore, of treating our devices historically, it will be more convenient to attempt a

¹ See No. 4 in the Appendix.

rough classification of them, which, however imperfect, will serve to give some idea of the subject as a whole.

In the first place we have the large group of devices which represent or include the sign at which the printer or publisher worked. With some notable exceptions, such as those of Wynkyn de Worde and Pynson, most of the early devices are of this type. Several even of de Worde's fall within this class, or at least on the border line of it, inasmuch as they include his sign of the Sun, though with so many other objects besides that it would be difficult indeed to infer from them the name of his place of business. Of this class may be mentioned the Trinity devices of Jacobi and Pepwell (Nos. 16, 33, 34, 52), the Maiden's Head of Richard Faques (No. 31), and the Mermaid of Rastell (No. 37). Peter Treveris, who traded at the 'Wodows' or 'Woodwoses,' a kind of wild men of the woods, common in heraldry as 'supporters,' had a male and female figure covered with long hair and bearing bows and arrows (No. 60): Berthelet had the well-known figure of Lucrece (No. 80), which was also his sign: Wyer a cut of St. John the Evangelist (Nos. 67, 68, 70): the Coplands' devices included their sign of the Rose Garland (Nos. 71 and 73), and so on. In later times we find other examples of the same class, such as the Mermaid of Bynneman (Nos. 149, 155), the Star of Denham (Nos. 150, 211, 214), and the Lucrece of Thomas Purfoot (Nos. 151, 161, 173); but relatively they are far less numerous than during the first century of printing.

The next class in importance consists of those devices which represent a rebus or pun upon the owner's name, such as those of Grafton, a tun with a graft or shoot growing in or through it. Most printers whose name happened to end in -ton seem to have used a device of this kind.¹ Thus William Norton had a tun with the word 'Nor' on it, and a sweet-william growing out of it

¹ As did many who were not printers. Camden in his *Remains*, ed. 1870, p. 180, instances the rebuses of Morton, Luton, Thorneton and Ashton.

(Nos. 174, 175). Seton had a tun floating in the sea, and William Middleton and Singleton had tuns with their initials (Nos. 102, 106, 127, 198, 250). Those whose names included names of birds or beasts punned upon them in a similar way. Thomas Woodcock used a cock on a wood-pile (No. 247); Thomas Fisher a kingfisher (No. 321). Hugo Goes is said to have used a great H and a goose (No. 1 in the Appendix), though unluckily no book bearing it is now to be found. Oxenbridge used an ox on a bridge (Nos. 288, 289); Henry Bell a hen, rye, and a bell (Nos. 386, 388); and the Harrisons a hare, rye, and the sun (Nos. 143, 169, etc.). Reyner Wolfe in one of his borders had a fox (for Renard) and a wolf (No. 120). Pavier used a man paving (No. 345); Christopher Barker a man barking logs (Nos. 169, 171, 190); Dexter a right hand pointing to a star (Nos. 257, 260); Richard Watkins a hare, because it was familiarly called 'Wat' (Nos. 169, 171); and Jugge a nightingale, because the word 'jug' was commonly used to represent the nightingale's song (Nos. 181, 182). Devices of this type seem indeed to have been the favourite ones with all those upon whose name a pun, however far-fetched, was possible. Some are very far-fetched indeed, such as that of Gerard or Garrat Dewes, which is found in a border of the devices of the assigns of Francis Flower (Nos. 169, 171), though, like that of Watkins, it does not seem to occur alone. It takes the form of a little picture of two men playing dice in a garret, and casting a 'deuce,' or two, and is referred to by William Camden, not without irony, as 'most memorable.'¹ It is indeed possible that some are so far-fetched that the lapse of time and changes in pronunciation have obscured their meaning; for example, the figure of Mars used by Thomas Marshe (No. 180) may have been intended as an allusion to his name, for there is some evidence in contemporary puns that the pronunciation of final *sh* and *s* were not very clearly distinguished.

¹ *Remains*, ed. 1870, p. 181.

Possibly a few devices for which no simple explanation offers itself may be personal in the sense of referring to some incident in their owner's career, but I do not know of any case in which we can prove this. Two devices which may be suspected of some such hidden meaning may, however, be referred to in passing. I have already mentioned Dexter's device of a right hand pointing to a star. The meaning of the hand is of course clear enough, but what about the star? It is no common star, but evidently what was known as a 'blazing star.' Now is it a mere coincidence that the most famous 'blazing star' of the Elizabethan period was that which appeared on 8th October 1580, and that it was at Michaelmas of the same year that Dexter began his nine years' apprenticeship to Francis Coldock? May not the sailor's son from Ipswich have seen in this strange portent an omen of good luck for his future career, and when he came to set up in business for himself, have remembered his star and used it in his device? This is of course a mere guess, but the explanation is not, I think, an impossible one.

Another device which may perhaps be explained in a somewhat similar way is the well-known swan in a border of intertwined serpents used by Robert Waldegrave, the puritan printer, with the motto, "God is my Helper" (No. 227). It so happens that in the Marprelate tract *Hay any Work for Cooper*, in the printing of which Waldegrave assisted, there is a list of the very numerous occasions upon which he had been in prison. Among these was one when he had been 'strangely released' by one of the Bishop of London's swans. Unfortunately we have no further information about this remarkable incident, but it seems not altogether impossible that the swan with "God is my Helper," which Waldegrave took for his device, so far as can be made out, at about the same date, was an allusion to it.

Another group of devices consists of monograms or initials, with or without a "mark." Of simple monograms we have among the earliest devices one of Pynson's (No. 3), the G. F.

monogram of William Faques (No. 15), and a J. R. of John Rastell (No. 40); among the later those of Francis Burton (No. 364), and Thomas Langley (No. 387). Monograms are, however, much more frequently found as parts of ornamental borders than standing alone. Among monograms or initials combined with or accompanied by a mark are those of Caxton, Egmont and Barrevelt, Notary, Grafton, Cawood, and others, among which may be noticed that of Michael Sparke (No. 406) used in 1628, and noteworthy, with No. 417, as a throw-back to the usage of the preceding century, for the early form of the printer's mark with a top shaped like a reversed "4," seems, except for an occasional appearance in a border, to have passed out of use in England by about 1560.

The most personal kind of device which it would be possible to use would be a portrait. Two printers made use of this: John Day, whose large portrait-device (No. 145) is well known, and John Wight (No. 205), if indeed, as is most probable, the picture of an old man in a gown, holding a book labelled "Scientia," and surrounded by the words "Welcome the wight that bringeth such light," is meant to represent the printer himself. Several other portraits are to be found in Ames' *Typographical Antiquities*, but unfortunately none of them seems to be authentic. They are stated to have been mostly the work of the engraver William Faithorne, and some are known to be copies of foreign prints; that, for example, which stands for Wynkyn de Worde being taken from a portrait of Joachim Ringelberg, an Antwerp scholar of the early part of the sixteenth century.

Heraldic devices form a larger group. They sometimes represent the printer's or publisher's own arms, and sometimes those of his patron. Among the former we have the arms of Richard Pynson, William Bretton(?), William Marshall, John Day, Richard Day, Christopher Barker, Thomas East, and John Beale, while other printers made use of some part of their family arms in their devices, such as Thomas Davidson (No. 65). Of the second kind

we have the tiger's head crest of Walsingham, used by Christopher Barker, the wyvern rising from a ducal coronet, the crest of George Clifford, Earl of Cumberland, used by Edward Aggas, Sir Christopher Hatton's hind, used by Bynneman, and several others. The arms of other noble families frequently appear in ornaments, the wheatsheaf or garb of Lord Burghley being especially common, but most of these seem to have been originally cut for use in works dedicated to the particular noblemen, and do not indicate that the printer or publisher was under his patronage. We therefore need not concern ourselves with them further.

We now come to what is on the whole the most interesting group of devices, or at any rate the most varied, namely those which represent not the owner's sign or a pun on his name, but an emblem of some sort. This may be of any degree of elaboration from a simple object such as an anchor or a caduceus, to a complicated picture borrowed from one of the emblem books. With these designs we may include such things as the Good Shepherd device, and that of Christ rising from the Tomb, though these are hardly, I suppose, to be called emblems in the ordinary sense.

Many of the emblematic devices require, of course, no explanation. The Anchor of Hope, the figure of Time mowing, the man looking into a mirror and seeing not his own face, but that of Death who stands at his shoulder; all these and many more can be understood at a glance. Others, however, including most of those copied directly from the emblem books, are hardly to be understood without a knowledge of the explanations there given. For example, to take one of the simpler ones: there is a device (No. 341) which was used from 1602 to 1609 by William Leake, and is perhaps a good deal older than this, for even in 1602 the border was badly broken. It represents a winged and laureated skull, resting upon the globe, with, above it, an hour-glass and an open book, on which are the words, 'I live to die, I die to live.'

This is copied from a design of the Hungarian scholar, John Sambucus, of whose *Emblemata* there were several editions from 1564 onwards. The motto on the book is there *In morte vita*, and the emblem is explained as meaning that if a man gives his life to the pursuit of learning his fame will fly all over the world even when he himself is dead.

Another emblem was used by Thomas Millington in the years 1595-7 (No. 302). This represents a tree broken by a storm, before which reeds bend uninjured. It is taken from Whitney's *Choice of Emblems*, and comes originally, I believe, from Adrianus Junius. The meaning is that Envy, Hatred, and Contempt, which are the storms and tempests of this life, are to be suffered with patience and not resisted.

The meaning of the winged skull and of the broken tree could probably be guessed without much difficulty. One would at any rate not go far wrong in the interpretation; but others are less easy. For example, take the well-known oval device (No. 142), first used by Rowland Hall in 1563, and later by William Howe and others. It depicts a fat boy with wings on one arm, and (apparently) trying with the other to lift a heavy bag. Would it not be a reasonable guess to say that it represents the soul aspiring after excellence, but held down by its reluctance to abandon its earthly possessions—a hint, perhaps, to a hesitating purchaser? But the true meaning, as we know from the *Emblemata* of Alciat, is quite different. The emblem represents a man ambitious to rise in the world, but kept down by his poverty. Surely a strange symbol for poverty, this well-filled bag!

Or take another, the device that was first used by Thomas Scarlet, and afterwards by Richard Bradock (No. 280, and in a smaller form, No. 277). This is described by Herbert as representing 'a kite, or some bird of prey, with a small bird in his talons, flying over a castle on a hill; the sun in full blaze; in a compartment with this motto, *Sic crede*.' The description is quite accurate,

but when we turn to the *Symbola* of Joachim Camerarius the younger we find that the meaning is something very different from what this description implies. The device does not, as one perhaps might fancy, symbolize the relations between the publisher and the too credulous author, but alludes to the story that the eagle in order to see whether its young is worthy to be reared, takes up the newly hatched eaglet in its talons and compels it to gaze at the sun. If it can do so without blinking, it is looked on as satisfactory, if not the eagle dashes it to the ground. Scarlet perhaps meant to imply that he printed nothing but first-rate work.

An emblem which is still more difficult to interpret was used by Islip in 1598 and 1613, and I am sorry to say that I can give no explanation of it. The device (No. 309) is, save for some simplification of detail, a close copy of an emblem of the Hungarian Sambucus whom I have already mentioned, and, as is evident from its motto, represents the things which are necessary to the stability of a commonwealth. Sambucus accompanied it by a Latin poem in which he gives a great deal of excellent advice to persons about to establish a government, but unfortunately omits to explain the details of his picture. The meaning of parts of the design may of course be guessed. The pillar, as will be seen, stands on a shield and helmet; this may symbolize the need for military power. The goose or gull at the top has a ring round its beak which prevents it from using the quill which it holds—hinting, I suppose, at the necessity of a literary censorship. The cornucopia perhaps means that liberality is requisite in the rulers, or it may mean that plenty will be the result of such a government; but what is implied by the balance, the scales of which contain one a snake and the other a cat—or why the cat seems so anxious to get away—I cannot even guess. So far, no rational explanation has occurred to me, and unfortunately, though there is said to be an edition of Sambucus with notes by Don John of Austria, I have been unable

to find a copy of this, or any other annotated edition, if such there be.

If we were to go through the whole number of the devices used during the second half of our period, we should find that a very considerable proportion, perhaps the majority, are based ultimately upon emblems. But it does not follow that they were in all cases taken directly from the emblem books. Many of them came to England through the medium of the device of a foreign printer. And this brings us to the next part of our subject, the borrowing of devices from abroad.

It has long been recognized that some of the earlier devices were adapted by English printers from continental models. In a paper on *Illustrated Books* read before the Bibliographical Society in 1900, Mr. Pollard gave several instances of this borrowing. Thus the earlier device used by Pynson was modelled on that of the Rouen printer Guillaume Le Talleur, from whom Pynson appears to have learnt his trade. That of Richard Faques is an altered copy of the elder Thielman Kerver's, who printed at Paris in the early years of the century, and the ungainly female used by John Byddell to represent Virtue or Pity is copied, and very badly copied, from a device used by Jaques Sacon, a printer at Lyons. I need only refer in passing to the history of the Brazen Serpent used by Reyner Wolfe and later by Peter Short, for this has been the subject of a special study which is printed in the Society's *Transactions*.

Later, the copying of foreign devices by English printers seems to have become even more common. The famous Estienne device of the olive-tree with 'Noli altum sapere' was used in 1599 by John Wolfe (No. 310), and re-cut (No. 311), from 1618 to about 1640 by George and Elizabeth Purslowe. In another form it was used from 1605 to 1624 or later by John Norton and John Bill, who had at least two, and probably three, blocks of it (Nos. 348-50). It was stated by T. B. Reed in his *Old English Letter*

Foundries, that permission to use this device was granted to John Norton by Paul Estienne, son of Henry Estienne the younger, while on a visit to England in 1594, as a mark of admiration for his printing. Paul Estienne did indeed visit England in 1594, but I am sorry to say I have been unable to discover any ground for the rest of the story. The authority referred to by Reed, the *Histoire de l'Imprimerie* of Paul Dupont, 1854, gives no evidence in support of it, and I have been unable to trace it further back.

Another famous foreign device, the Pegasus over a caduceus and crossed cornucopias used by Andreas Wechel at Paris in the middle of the sixteenth century was closely copied in or before 1600, probably by John Harrison III (No. 316; cf. Nos. 317, 318). There were several blocks of this also, one of which was in use at least until 1684.

The Plantin device of a pair of compasses with the motto *Labore et Constantiâ* was used here in two forms, both closely copied from foreign originals, one upright (No. 334) used from 1601 to 1608 by John Harrison and Nicholas Okes; the other, lengthways (No. 411), used about 1630 and, re-cut, from 1649 to 1658 or later. The device of Sébastien and Antoine Gryphius, a griffin squatting on a stone, or perhaps a book, underneath which is a ball with wings, was used in 1587 by Vautrollier and in a larger form in 1602 by Thomas Creede (Nos. 246, 339). Of this also there appear to have been other blocks later.

It is not my purpose to give a list of the devices modelled on those of foreign printers; but one group, namely the imitations of the devices of the Gioliti brothers of Venice, seems to deserve especial mention.

The earliest of the Giolito devices to be copied was that of a phoenix looking at the sun, which is found in books printed at Venice in 1562. This was used by Henry Bynneman in 1578-9 (No. 203). He does not seem, however, to have regarded it as one of his regular devices, and two years later, when Newbery printed by

his assignment Stephen Bateman's *Doom warning all men to the Judgement*, the printer used this device to illustrate a description of the phoenix, for which purpose its emblematic character renders it of course quite unsuitable. Newbery is said to have used it in another book also printed in 1581, but after this date it does not seem to be met with.

Another of the Giolito devices, the best known, represents an urn upheld by two satyrs; from the mouth of the urn flames issue and from these a phoenix is rising. In England this device is found in two forms. The larger (No. 254) is rather roughly imitated from the foreign design, and was, so far as I have seen, only used in three books printed in the year 1589 by Thomas Orwin. The smaller (No. 252) has, however, a longer and more interesting history.

It seems to be generally held, though I cannot recall having seen the statement in print, that some of the foreign devices used by English printers were the actual foreign blocks; and if there ever was a device which might well give rise to such a belief, it is certainly this smaller Giolito one, for not only does it appear at first sight to be absolutely identical with the Venetian block, but it even bears the letters G.G.F., standing for Gabriele Giolito de' Ferrari, as does the original. Careful examination of clear prints from the English and foreign blocks puts it, however, beyond doubt that they were not identical, and that the English one is simply a very careful copy.

But the interesting point about this block is the use to which it was put. As is well known, in the years 1587-1591, or thereabouts, John Wolfe printed a number of Italian books.¹ To a few of these he put his own imprint, but several have the imprint of

¹ It may be noted that the English editions of Italian books may generally be distinguished by the occurrence here and there of black-letter punctuation marks, especially full stops and colons, which would of course not be met with in genuine Italian books of this date.

an Italian printer and a device copied from an Italian one, though not necessarily from that of the man by whom the book purported to be printed. Why Wolfe did this is not altogether clear. It can hardly have been in order to evade any prohibition against printing these books in England, as most of them, including the *Ragionamenti* of Pietro Aretino, the *Decamerone*, and several works of Macchiavelli were entered to Wolfe in the Stationers' Register. I suspect that the purpose of the deception was merely because genuine Italian editions would fetch a better price than English, as being more correct; and it is by no means impossible that Wolfe exported these books to Holland and Germany, where an English print of an Italian book could hardly be expected, if known for what it was, to find much favour. In any case Wolfe evidently found it worth while to take a good deal of trouble to get careful copies made of some of the foreign devices.

The one which we are now considering is first found in the *Historie* of Macchiavelli 'In Piacenza appresso gli heredi de Gabriel Giolito de Ferrari,' 1587, after which date, so far as I am aware, it disappears from view for several years. It turns up again in 1600, when it was used in the *Palestina* of Robert Chambers, which bears the imprint of 'Bartelmew Sermartelli' of Florence. The work is in English, and taking into account the appearance of the workmanship and the fact that the book is a curious allegorical romance dealing with biblical characters to which objection might easily be taken on religious grounds, it seems highly probable that it was secretly printed in England, but the printer has not been identified.¹

The later history of this device is not very clear. After its use in *Palestina* we lose sight of it for several years. In 1611, however, it turns up again in a book said to have been printed at

¹ Wolfe was still printing, and it is possible that it may be his. It may be remarked that Sermatelli [*sic*] was a real person, but there seems no reason for thinking that he ever used the Giolito device.

Britain's Burse for John Budge, and in 1612 is used in one bearing merely a date with no place or printer's name. In 1613 it appears in a book printed by Stansby for John Budge, and later in one with the imprint of Cantrell Legge of Cambridge.

But this Giolito device was not by any means the only block of foreign design used by Wolfe in his Italian books. In Macchiavelli's *Asino d'Oro* and *Clitia*, printed in 1588, we find a close copy of the lower part of a device used by Domenico Giglio at Venice in 1552 (No. 249), which is, as A. J. Butler pointed out in his paper on the Giolito Press, read before the Bibliographical Society in 1909 (*Transactions*, x. 98), itself imitated from the Giolito device. In this case also he kept the initials of the foreign printer (D. G. F.). This block also had a long history, not the least remarkable feature of which is its appearance in a book purporting to have been printed by Robert Waldegrave at Edinburgh in 1603. It came eventually into the hands of Augustine Mathewes, who used it until at least 1633.

Another device used by Wolfe in his Italian books, an emblematic device of serpents and toads at the base of a palm tree, is also probably copied from a foreign one, but though the same general design is to be found in the emblem-books I have not traced any direct original for this block.

Wolfe had, as is well known, a connection with Italy, and is supposed to have passed some time at Florence about 1576.¹ It is perhaps for this reason that as his regular device he used the fleur-de-lis of the Junta family. Most if not all of his numerous fleur-de-lis devices are more or less closely copied from those of one or other branch of this family, who had printing establishments at Florence, Venice, and Lyons. Information about the later Italian devices is, however, as a rule, not easy to obtain, and I have been unable to discover whether Wolfe's blocks were exact

¹ Two Italian *Rappresentazioni* were printed at Florence in that year, 'ad istanza di Giouanni Vuolfio, Inglese' (*Dictionary I*, p. 296).

copies of particular foreign ones, or mere imitations of a general design.

We must, I think, confess that what with devices borrowed from those of foreign printers, and devices taken from foreign books of emblems, the native powers of invention and design make a very poor show. Indeed, with the exception of the heraldic cuts, and these are not numerous, hardly a single one of the later devices can be claimed as genuinely English in origin. Such native work as there was is rather to be found in the woodcut borders than in the devices, though even here there are, throughout the period, innumerable signs of foreign influence. If we should seek for a reason for the comparative inferiority of the English work we should probably find it in the rise of copper-plate engraving, which came much into vogue about the middle of Elizabeth's reign, to the neglect of the better kinds of wood-cutting. But this is an inquiry which would lead us too far from our subject.

Before passing to consider some points of interest in the particular history of one or two devices, it may be well to draw attention to a small group of designs which, if one may be permitted the expression, were not born devices, but had deviceship thrust upon them. I do not mean simple cuts such as those of the Trinity and of the Infant Christ, occasionally found in Robert Redman's productions; nor the two depicting the expulsion of Adam and Eve from the Garden of Eden, and the Sacrifice of Isaac, which Herbert called devices on the ground that Tisdale made frequent use of them; nor yet that abominable little cut reputed to represent Hercules striking a Centaur with a club, which occurs in many books of John Skot of Edinburgh, for none of these has been included in the present volume; but those more elaborate pictures which from the frame in which they are set, and the general character of their design, would naturally be regarded as devices, and which yet seem to have been originally intended as embellishments for particular books.

Among these we may perhaps class one of the devices commonly used by John Day (No. 208). It depicts Christ with a palm in His right hand, trampling upon a skeleton, evidently intended to represent death, and on a dragon intended to represent sin. The earliest print of this block that I have been able to find is on the title-page of a tract, *Contra Missae Sacrificium*, appended to Peter Baro's *Praelectiones in Jonam Prophetam*, 1579. The title-page of the tract which bears this device is dated 1578, but the end is dated 1579. It is thus probable that it was printed late in 1578. Now also in 1579 John and Richard Day issued a work of John Foxe translated into English under the title of *Christ Jesus Triumphant. A fruitful Treatise wherein is described the most glorious Triumph and Conquest of Christ Jesus, our Saviour, over Sin, Death, the Law, the strength and pride of Satan and the World, with all other enemies whatsoever against the poor Soul of Man*. This work was entered in the Stationers' Register on 28th May 1578 (Arber, ii. 327), and hence was probably in preparation, and at least partly in type before the tract mentioned above.¹ When, therefore, we consider how closely this block accords with the subject of *Christ Jesus Triumphant*, it is difficult, in spite of its apparent use a few months earlier, to resist the idea that it was originally cut for Foxe's work. Once having obtained it, however, the printer probably thought it a pity to make no further use of it, and employed it in the title-pages of several of his other productions, and in fact it came to be one of his regular devices.

Another case of the same kind is a certain cut of an old man praying and an angel blessing him (No. 308). This seems first to occur in the 1597 edition of a work entitled *Daniel his Chaldee Visions*, printed by Gabriel Simson, and I think there can be little doubt that it was designed for that particular work. So far as I

¹ The tract *Contra Missae Sacrificium* does not seem to have been entered in the Register, but *Baro in Jonam* was entered 26th March 1579 (Arber, ii. 350).

can discover, it was never again used by Simson, but from 1606 to 1620 it frequently occurs in books printed by George Eld, who had succeeded to Simson's business, and is indeed regarded as one of Eld's usual devices.

An even clearer case than these can be found in a device which was used on the title-page of Healey's translation of St. Augustine's *De Civitate Dei* (No. 375). This represents the sun breaking through clouds, and has a motto, evidently cut in the block itself, '*Sic Augustinus dissipabit.*' This motto was afterwards removed, and the block was used, either with or without a motto inserted in type, as a regular printer's device.

Even the well-known half-eagle and key—the arms of the city of Geneva—used by Rowland Hall, and many others after him, may be of this class, for it seems first to occur in Hall's *Laws and Statutes of Geneva*, 1562. As, however, Hall in the same year took the Geneva Arms as his device, we cannot say whether the sign was suggested by the cut or the cut by the sign. I have been unable to ascertain whether the French original of the *Laws and Statutes* has a similar cut of the arms or not. This would perhaps settle the point.

To the bibliographer the important part of the study of devices is, as a rule, the history of the blocks considered singly, for a knowledge of the ownership of them at different times, of the alterations made in them, and of the accidents that befell them, is often of the greatest service in aiding us to date books in which they occur, or to assign them to their true printers. But such a detailed history of the blocks is of course the main purpose of the present volume, and it is not necessary to dwell upon it here. It may, however, perhaps not be out of place to bring together a few notes on the subject.

First, as illustrating the long life of some of these blocks, it may be remarked that the half-eagle and key (No. 136) can be traced in use from 1562 to 1637. The palm tree with snakes and

toads about its roots (No. 226), used by John Wolfe in 1584, is found as late as 1681.¹ An insignificant little fleur-de-lis device (No. 263) which I have not met with before 1602, when it had already been mutilated by the excision of the motto, but which probably dates from some ten years earlier, is found in 1685 on the title-page of the 'Fourth Folio' of Shakespeare's works. Lastly, the caduceus device (No. 112) used by William Baldwin in 1549 is met with as late as 1674. It had thus a life of 125 years, not bad for a woodcut, though not indeed to be compared with the life of some of the cuts used to illustrate ballads.

Cases such as these are of course exceptional, but a very large number of devices occur at intervals extending over a period of thirty or forty years, though it need hardly be said that a woodcut in regular use would generally be worn out in a very much shorter time than this. For example, a device of Pynson's (No. 6) began to crack in the second or third year of use, and was shortly afterwards practically discarded. Some are found for only a year or two; others seem only to occur in a single book, whether because they broke, or for what other reason, we cannot say. The life of a device no doubt depended greatly on its owner; the less he cared about the appearance of his books the longer he made his devices last.

A life of a hundred years or more must naturally imply a succession of owners, and some of the devices passed through the hands of a surprising number. The eagle and key device, which has just been mentioned, was used in turn by Rowland Hall, Richard Serle, John Charlewood, Richard Jones, James Roberts, William Jaggard, and Thomas Cotes. The devices of Henry Denham, together probably with Bynneman's, passed through the hands of Richard Yardley and Peter Short, Henry Lownes, and Robert Young. The anchor devices, originally owned by Vautrollier, passed later to Richard Field, George Miller and Richard Badger in partnership, and Abraham Miller. A device of a

¹ For my knowledge of this I am indebted to Mr. Sayle.

swan in a border of intertwined serpents (No. 227), originally cut for Robert Waldegrave about 1583, was afterwards used in succession by East, Shodham, and Harper, in whose possession it was certainly as late as 1639, and perhaps later. Some of the title-page borders were used by a greater number of printers than even these devices, but, as we shall see later, it is doubtful if a border was always the property of the printer in whose work it appears.

Most of these devices passed from one owner to another with little change save for cracks and other accidental damage, but others were more or less altered in the course of time, and exist therefore in two or more 'states.' The reasons for such changes were various, but as we should expect, by far the most frequent was the desire to get rid of such details as identified the block with a former owner. A large number bore the initials of the person for whom they were originally cut, and in many cases, but not all, later owners removed these or altered them. For example, one of Vautrollier's anchors (No. 210) had the initials T. V. When this passed into the hands of Field, he had them removed. The Fortune device of Thomas Marshe had the letters T. M., which were excised when the block became Kingston's. And so in many other cases, both of devices and ornamental borders. The practice obtained from quite early times, as may be seen in the devices of Notary (No. 8), de Worde (No. 50), Pepwell (No. 48), Hertford (No. 84), and Gibson (No. 83). The last is a somewhat curious example, for in addition to having at the sides the letters T. G., the initials of its first owner, it had also a G on the forehead of the sun which forms the lower part of the design. John Day, into whose hands the block afterwards came, removed the T. G. from the sides, replacing them by his own initials in type; but apparently thinking that it would be troublesome to insert new letters into the forehead of the sun, he carefully cut away part of the G, so that what remains might serve as the initial of his Christian name—the sun itself perhaps representing Day. Robert Waldegrave,

into whose possession the block next passed, perhaps did not identify this I with John Day, for while sometimes using his own initials at the sides, he let it remain.

In one early case, where a device passed from Henry Jacobi to Henry Pepwell, the later printer cut out Jacobi's surname, but kept the 'Henry,' as it was applicable to himself also (No. 34). We may surmise that he meant to insert his own name in type in the vacant space, but found—as indeed is apparent—that there was not room.

We find also a certain number of alterations of name made for other reasons. Richard Faques, who seems never to have been able to decide upon the most satisfactory spelling of his name, had it first cut as Faques (No. 31), but later removed the 'ques' and inserted 'kes' in type. John Skot had his mark and initials removed from one of his devices (No. 59) and replaced by a monogram. Why he did this we cannot guess.

Alterations made for the purpose of improving the design are, as we should expect, few in number. There is, however, at least one case of the rectification of a verbal error which is sufficiently curious to be worth mentioning, especially as it concerns a somewhat elaborate device, Christopher Barker's tiger's head and lamb. The greater part of this device, which Barker possessed in two sizes (Nos. 191, 194), is occupied by a folded scroll, bearing an inscription in Italian. This inscription is an odd one, and I cannot think that the Italian is altogether satisfactory. It appears to mean—or to have been intended to mean—'The tiger, a wicked animal, son of the old Adam, by the grace of the gospel has become a lamb.' Unfortunately, however, Barker, or his engraver, was not a good Italian scholar, and instead of cutting the word 'agnello,' meaning a lamb, he cut 'agnolo,' a variant form of the word *angelo*, 'angel,' and the inscription accordingly declared that by the grace of the gospel the tiger had become an angel. Someone perhaps pointed out to Barker that this was ridiculous, and

might even savour of heresy, so he went to the expense of having the offending word cut out and the correct 'agnello' inserted. Of two Bibles which he printed in 1576 one has 'agnolo,' the other 'agnello.' The smaller device does not seem to have been used after the discovery of the error, and perhaps was never corrected.

There was, however, one group of devices which appear to have been altered for æsthetic reasons—at least I can suggest no other reason for the changes that were made in them. These are the well-known group showing Christ as the 'Good Shepherd' carrying the lost sheep, and having the motto, 'Periit et inventa est.' There were three sizes of this device, respectively 91, 64, and 30.5 mm. in height (Nos. 153, 202, 207). With the smallest we are not concerned, as during the twenty or so years for which we can trace it, none of its owners seems to have made any change in it, but the history of the other two is somewhat curious. They have, it may be said, every appearance of belonging together, and of having been designed and cut by the same hand, but are first found in the work of different printers.

The largest (No. 153) in its original state was first used by Henry Wykes from 1567 to 1571. It had then a face at the top of the border, other faces on each side, and, below, a rampant lion and an elephant, the latter evidently representing Wykes's sign of the Oliphaunt or Black Elephant. When Wykes gave up printing in, or soon after, 1571, the device seems to have passed to Ralph Newbery, who used it in 1577. In the next year, however, it is found in a book printed by Henry Middleton, in whose hands it apparently remained for the rest of its existence. Ralph Newbery, though he did not use the sign of the Elephant, had kept the device unchanged, and so did Middleton until 1579. In that year, however, he seems to have taken a sudden dislike to the faces which appear in the border, for he had all three of them cut out and harmless ornaments inserted in their places. He also removed the lion and elephant below and inserted ornaments there also.

The work was very neatly done and must have cost a good deal of trouble; but in most prints it is possible to see the joins. In its amended form the block was used by Middleton until 1585.

The middle-sized block (No. 202) also passed through the hands of two or three owners, but I have not, so far, been able to discover that Wykes had it, or indeed to find it earlier than 1578, when it was used by Middleton. This block also had a face at the top, and in 1579 Middleton had similar alterations made in it to those which were made in the larger block, the face being cut out and a kind of bunch of leaves substituted. In this form he used it in three parts of the Latin Bible printed in 1579-80. Even so, however, he was not satisfied, and before printing the fourth part of the Bible he made another alteration, cutting away a large part of the ornament which he had inserted, so as to leave merely a little point in the centre instead of the bunch of leaves. From this date the history of the device becomes somewhat obscure, for it seems to have been used jointly by Newbery and Middleton. What, if anything, is the significance of this fact, I have been unable to discover; for though Newbery printed one or two books at various times for Middleton, there does not seem to be any trace of a regular connection between the two firms. However this may be, we certainly find the block used in 1580 by Middleton; in 1582 and 1583 by Newbery; in 1583 again by Middleton; in 1584 by Newbery; and in 1585 by Middleton, in whose hands it apparently was at his death; for the block then passed to Robert Robinson, who bought Middleton's printing material. It is uncertain who had it after Robinson, but it was still in existence in 1635, when it occurs in a book printed for John Legate II and Ralph Mab. By this time the piece inserted by Middleton had fallen out and been lost, leaving a square gap at the top. It was perhaps not considered worth while to patch it up by the insertion of a new piece, and it seems to have been discarded.

Though this is the only example known to me of an im-

portant change, involving recutting of part of the design, being made apparently for æsthetic reasons, there are several examples of smaller changes which were perhaps due to a similar intention, as, for example, the white dots cut in Nos. 3 and 74, and the clearing away of the background in Nos. 46, 188, and 262. In the last three cases it may have been found difficult to get reasonably clean prints from the blocks in their original state.

These will suffice for examples of alteration, and in this connection I may say that I have not come across a single instance of an attempt being made to repair a broken block by the insertion of new pieces, though one would have thought that such trifling defects at least as broken rule borders might easily have been put right. When a border broke the printers seem usually to have cut it away altogether, as in the case of Nos. 3, 144, and 354, or if this did not satisfy them, to have had a new block made and discarded the old one altogether.

There are a good many instances of a design being re-cut, whether for the original owner or a later imitator, the earliest being the well-known large 'tripartite device' of Wynkyn de Worde, of which there were three blocks (Nos. 19, 20, 21). Later were William Norton's device of a tun with the word 'nor' and a sweet-william (No. 174); two forms of the Estienne device (Nos. 310 and 348); the Pegasus device of Wechel (No. 316); and, most troublesome of all, the small fleur-de-lis devices, of which there were two main forms, with a plain background and with a dotted one, each of these forms being recut a number of times. I have given ten blocks of these fleurs-de-lis (Nos. 263-272), but even now cannot hope that I have got them all.

A device the re-cutting of which seems to have passed unnoticed is No. 273. This, which represents clasped hands and cornucopias, was used by Thomas Orwin in 1590, and later by his widow, and by Felix Kingston, until about 1607, by which time it was badly cracked. It was then replaced by No. 274,

which differs from it in having a cross as ornament at the top of the frame, instead of a rivet-head as the earlier block.

In connection with this recutting of blocks, there is one point to which I must briefly refer, though indeed I cannot throw any fresh light upon it, namely, the material of which the blocks themselves of the devices were made. It is of course evident that many, indeed most of them, were of wood, for we find cracks and wormholes that cannot be explained on any other assumption, but it is at least highly probable that several of the later ones, as well as a few of the earlier, were of metal. It is not only that they have finer lines than we generally associate with sixteenth and early seventeenth century wood-cutting, but that they remain in good condition for a far longer period than a wood block can be expected to do. Some indeed give as good prints after twenty or thirty years of service as when new.

Now it matters to us very little whether a block is of metal or of wood; but if it is of metal, it matters a great deal whether it is cast, or cut from a solid block as a wood-cut is. For if it is cast, there is no reason why there should not have been in existence several blocks giving prints indistinguishable from one another, and hence rendering untrustworthy any inference as to the order in which books were printed, based on the apparent condition of the device.

Small metal ornaments cast from matrices were, I believe, in use in England from quite early times in the history of printing, but the earliest certain evidence of the casting of anything large and elaborate that I have come across dates from 1583, when on the title-page of Day's quarto edition of Sternhold and Hopkins's *Psalms* we find two blocks of the well-known ornament of archers with dogs, etc., at the head and at the foot of the page. The blocks are so exactly similar that I think there can be no doubt that they were cast, and hardly touched up at all by the graver afterwards.

If it was possible to cast ornaments of this size—they measure 34 by 139 mm. (about $1\frac{3}{8}$ by $5\frac{1}{2}$ inches)—it must have been possible to cast devices, and I have therefore been for some time on the look out for any evidence of such casting. I refer of course to devices properly so called, and not to the smaller ornaments sometimes used as substitutes for them. Up to the present I am glad to say that I have found no indication whatever that any device was cast. Such evidence as there is seems all to point to there being only one block of each in use at a time.

If a printer regarded a device as of any practical service in distinguishing his books, he would surely have preferred always to use the same one. As I shall attempt to show later, in order to do this conveniently, he would have needed a number of blocks, but if they were cast there would have been no difficulty in obtaining as many as he required. Yet we find that without exception the printers either used a number of quite different devices, or issued some of their books with no device at all. Further, if devices were cast, it would probably have been an easy matter to produce new blocks by using the old as a pattern—provided of course that this was done before they were too badly worn or broken—and going over the result with a graver. I have, however, found no re-cutting of a block sufficiently close to the original for it to have been produced in this manner.

Though casting must have been possible, it may not have been easy. A satisfactory cast cannot be produced by simply pouring type metal on an impression of a pattern in sand or clay, and the expense of making a mould of the right shape for the particular block, in which the cooling metal would by its own expansion be forced into the interstices of the matrix, might easily have been more than that of procuring a new cut, when wood-cutting, and old devices of other printers, were cheap. It may have been quite worth while for the type-founders to make such moulds for casting ornaments and initial letters of which a number of blocks would

be wanted for sale to several printers, and which of course tend to standard sizes, but it would be a different matter when at most half-a-dozen copies of a particular device were required. The question cannot, however, be regarded as by any means settled, and I hope that anyone who has evidence of the casting of any device will not fail to call attention to it.

In conclusion it may be well to say something about the use of devices as a whole, and here the most noteworthy fact is the way in which the frequency of their occurrence varied at different times. The fashions changed, no doubt, in this as in other things, and what at one period was a necessity to every respectable printing house and to every well printed book, at others was a thing of no moment at all. It would be interesting to know at what time the percentage of the whole output of books which bore a device was greatest, but to discover this would need a long and complicated inquiry. My impression is that the percentage was highest in the first quarter of the fifteenth century, but this is merely a guess. A much easier task is to determine the number of *new* devices cut at different times, and of this the following list (which includes signed borders) will give some idea. It must, however, be understood that the numbers are only approximate, for in a large proportion of cases the date when a device first came into use is not precisely known. Some devices of which the date is specially uncertain have been omitted from the count.

To 1500	11	1576-1600	128
1501-25	46	1601-25	76
1526-50	60	1626-40	34
1551-75	66		

It will be seen that the period most prolific in new devices and signed borders was the last quarter of the sixteenth century. It coincides therefore almost exactly with the decline of wood-cutting for purposes of book-illustration. Perhaps the woodcut artists

found in work of this kind a partial substitute for their lost employment.

In a list of devices arranged according to the year in which they make their first appearance, the most striking thing is the sudden outburst of new devices in the years 1574-6. The preceding three years 1571-3 had produced only five devices, a fair average for some time back. Against this we find in the years 1574-6 no less than twenty-eight, nearly six times as many. For several years after 1574 the number is high, the period 1574-81 producing fifty-seven, an average of over seven per annum. Thereafter the numbers become irregular again, but are on the whole high, the year 1592 being a record year with fourteen. After the beginning of the seventeenth century there is a considerable drop in numbers, especially in 1620-6, when only nine make their appearance, and there are several years when we find no new ones at all.

If the English printers and publishers had been as consistent in the use of their devices as most of the more important foreign ones were, the study of the subject would be a far simpler matter than it is. On the other hand, the value of such study for the identification of the printer or publisher of books issued without an imprint, would probably have been much less. Had an Aldus or an Estienne thought it unwise to make public his share in a work which had issued from his press, we may be sure that he would not have put his device upon it, for who, seeing the dolphin and anchor, or the old man and the olive tree, would have failed to recognize the house from which the book came? But an English printer with half-a-dozen devices of various designs and origins might safely give his work a finish by using one of those he employed infrequently, for no one, save perhaps another printer, would be at all likely to connect it with him. No doubt in cases where it was very important to conceal the origin of a book, the printer would attempt to eliminate all traces whatever of his work, but a comparatively large number of books are to be found in

which the printer seems not to have wished to advertise his share, and yet not particularly anxious to conceal it. Thus the printer of the three 'Pasquil' tracts against the Martinists in 1589-90 refrained from putting his name on them, using such fantastic imprints as 'printed between the sky and the ground within a mile of an oak,' 'printed by Pepper Alley,' and 'printed where I was,' but nevertheless placed on these tracts a device (No. 112β) which must surely have revealed to those in the trade from whose press they came.

By the later printers, at all events, their device seems seldom to have been regarded as a thing of importance. They used it or not, and they used their own or an old one of some other printer's, as suited their convenience at the moment. Of all those who after 1550 produced any considerable body of work, there is, I think, only Vautrollier and his successor, Field, who were absolutely consistent in always using a form of the same design, in their case the well-known anchor. Every other printer seems at one time or another to have either varied his device or to have used old blocks of another house. And of course even Vautrollier and Field issued books with no device at all.

It may be thought strange that a printer who had his device in two or three sizes, suitable for a folio, a quarto, and an octavo, as many did, should not have used it in *all* his books. Considering how few presses these printers had, it would seem unlikely that they should be printing off the title-sheet or colophon of more than one book at a time, and one would therefore have expected a device-block always to be available. There is, however, I think, a simple explanation of this in the custom of keeping the type of a title-page standing after the rest of the book had been distributed. A good many stray pieces of evidence, which taken together have considerable cumulative value, point to this being a common practice,¹ and the reason for it is almost certainly that prints of a

¹ As to plays of different editions in which the title-page is from the same setting-

title-page were the common form of book-advertisements. We know that even in the time of Martial the titles of books were posted up on the booksellers' shops, and the custom probably continued until it was replaced by more modern methods of advertising. There are numerous allusions to the posting-up of title-pages in the Elizabethan and Jacobean period,¹ and we hear of the same practice in the time of Pope.² It is perhaps in consequence of title-pages being regarded chiefly as advertisements, and as the business of the publisher rather than the author, that custom permitted them to vaunt so shamelessly the varied delights of the book within.

We do not, of course, know the extent of this practice, nor what number of copies of a title-page would normally be used for purposes of advertisement, but if it was expected to be at all considerable, or if further copies were likely to be called for at a later date, it would be natural for a printer to keep the title-page, with whatever device it happened to bear, undistributed until the sale of the book had ceased or the type was absolutely required for something else. And we have thus quite a sufficient explanation of the variety of blocks used by some printers as devices, and of the irregularity of their use. The non-use of a particular block will simply mean that, being locked up in another title-page, it was not available.

The transfer of devices from one printer to another is a subject

up of type, see Dr. W. W. Greg in *The Library*, 1908, pp. 400-1. Other evidence may be found in cases where the same title-page occurs twice in a book, as in Gabriel Harvey's *Pierce's Supererogation*, 1596. Sometimes the lower part of a title-page—the imprint, with or without a device—will be found to be from the same setting-up in two different books, probably indicating that the title of the first was kept standing until the second was ready.

¹ Among allusions to it the following may be noticed: Nashe, *Terrors of the Night*, sig. A4; *Have With You*, R1 verso; Hall, *Virgidemiae*, v. ii. 45-50; Parrot, *The Mastive*, 'Ad Bibliopolam'; Davies of Hereford, *Paper's Complaint*, l. 97.

² *Epistle to Doctor Arbuthnot*, ll. 215-16; *Dunciad*, i. 40 and Curll's note.

full of difficulties. Some transfers indeed are simple enough, as when a whole business with all its stock and materials passes from one owner to another—for example in the case already mentioned of Vautrollier's devices passing to Field; but in a number of instances the reason and circumstances of a change of ownership are far from clear.

As a general rule devices do not pass from an owner during his business career, though even to this rule there seem to be exceptions, but it is quite common for a man's devices to be scattered at his death among a number of owners, or to pass to a different man from the one who succeeded to the business.¹

Two reasons apart from a transfer of business seem occasionally to have led to the use of devices by other than their original owners. The first, that the new owner was using a sign represented by the device. This probably explains Charlewood's ownership of Hall's Geneva Arms block, for we can trace no connection between him and Serle, the previous owner. Charlewood may have known of the existence of the block and obtained it expressly as representing the sign which he had chosen. But this cause of transfer is no doubt very rare.

A more frequent one is the apparent wish to make a new edition of a book more or less similar to an old one. Why this should have been attempted is not at all clear, but it is difficult otherwise to explain the occasional occurrence of devices in the hands of people who seem to have no direct connection with their former owners. For example, No. 138 occurs in the 1580 edition

¹ In this connection it may be well to warn readers that certain lists of printers at different periods, such as those given in Sir John Lambe's notes printed in Arber's *Transcript*, vol. iii, are not intended, as at first sight might appear, to show the history of the *printing-houses* or businesses, but the succession of *printers*. As the number of printers allowed to carry on their trade was fixed, a new one could only start when one went out of business. The new one obtained the other's place among the recognized printers, and in this sense was his successor; but it does not necessarily follow that he took over his business, though he often did.

of *The Secrets of Alexis* by J. Kingston for J. Wight. For some fifteen years previous to this it seems to have been in the hands of Bynneman, who lived till 1583 and is unlikely to have parted with it in the ordinary way of business. The block had, however, been used in the 1566 edition of the *Third Part of Secrets* by H. Denham for J. Wight. It is just possible that some idea of making the new edition uniform with the third part of the earlier one, copies of which may have remained unsold, caused the use of the block there.

A clearer instance is, however, afforded by a large device of Peter Short's (No. 335) which appeared in the 1602 edition of the *Works of Josephus* and is afterwards used in editions of the same book issued in 1632 and 1640 with the imprint "J. L. for A. Hebb." So far as is known, Robert Young, who was at these dates in possession of the Short business, had no share in the production of the book, but it is of course possible that he had certain rights over it, and that the use of this device is an indication of them. This is a possibility which we must always bear in mind when dealing with such apparently unexplained transfers.¹

In a small number of cases we may, I think, suppose that the change of ownership was due to simple accident or carelessness. It is thus, probably, that some of the publishers' devices came into the hands of printers. The owner of a device would send it to a printer to be used in a particular book which was being printed for him, and would presumably leave it with the printer until he wished it to appear in another book to be printed at a different press. When, however, the publisher died or went out of business, there was a considerable chance that the device would not be re-

¹ Other cases of devices being temporarily transferred to a new printer for use in reprints of works in which they first appeared are Nos. 391 and 392. Both these may, however, have been cut as appropriate ornaments for the books in which they were first used. A somewhat similar case is that of a compartment bearing the crest of Lord Burghley (No. 162), which was cut for a book dedicated to him and was afterwards used by another printer in a different work also dedicated to him.

claimed, and, I suppose, after a certain time the printer would feel quite justified in considering it as his own. We may thus probably explain the transfer to Bynneman of England's device No. 138, and perhaps that of No. 203 from Bynneman to Newbery.

Lastly, something must be said as to the occurrence of borders in works in which their apparent owners seem to have had no share. The borders with which the present work deals are, of course, only those which have some especial mark of ownership and which, therefore, would less naturally appear in the work of other men. But in the case of borders which have no such distinguishing mark, an apparent transference backward and forward between printers who are not known to have had business relations with one another, is exceedingly common. The simplest explanation, and the only one which seems to suit the facts, is that they were lent or hired out. A good wood-cut compartment, especially one of a large size, must have been of value, and probably was considered to add greatly to the attractiveness of a book. There is at any rate nothing improbable in the idea that printers hired such things from one another as modern publishers obtain electros of illustrations.

It results from this that we must guard ourselves against assuming that a work in which one of these more elaborate title-borders appears was necessarily printed by the probable owner of it at the time. In attempting to determine the printer of such a work we must rely chiefly for our evidence on such initial letters and smaller ornaments as it would not be worth anyone's while to borrow. Indeed, in this, as in detective work of all kinds, it is the apparently unimportant which is most valuable as evidence.

EXPLANATORY NOTE ON ARRANGEMENT, ETC.

Order of Devices: The devices and compartments have been arranged, as nearly as their sizes and shapes permitted,¹ in chronological order according to the first appearance of their designs. Thus recuttings and altered blocks are treated as of the same date as the originals, and placed with or near them.²

This chronological arrangement has not been adopted without careful consideration, and though at first sight it may seem a wanton departure from the obvious method of arrangement under owners, I believe that those who make use of the book will find it the most convenient one.³ An arrangement according to owners, while satisfactory enough if we are only dealing with devices up to about 1550, becomes impossible when we reach a later date and find the majority of printers using old blocks which had belonged to others—sometimes to several others—before them. Any such system would either have meant the repetition of a very large percentage of the devices,⁴ some appearing six or seven times in various parts of the book, and would have necessitated a search in a variety of places in order to discover the history of a block or its condition at a particular date; or else the later part of the book would have consisted chiefly of a complicated system of cross references, making the discovery of the devices used by any particular person, the sole purpose of an arrangement under owners, more difficult than by the use of the index which is here provided.

After all, how often does one require to discover all the devices used by a particular man? In the great majority of cases a user of the book will start with a particular device, and wish to know when and by whom it was used. No arrangement, save one according to size, will enable him to turn to it at once in the book—least of all

¹ Not by any means very nearly. The shapes are often most awkward and it has been impossible to find a place for some of the blocks within several years of where they belong.

² A few imitations cut at a much later date and for another printer are treated, however, as entirely separate, *e.g.*, Arbuthnet's imitations of Jugge's devices.

³ Save one. For the purpose of ready reference the best arrangement would undoubtedly be according to size; but I am not sorry that this method was vetoed on aesthetic grounds.

⁴ And not only this, but a very large and wasteful increase in the number of blocks; for evidently one would in each case be bound to reproduce the device *as used by the particular owner*, though with all save a very few blocks the resulting prints would be indistinguishable from one another.

an arrangement according to owners—for it is precisely the owner that he wants to discover; but he will be able to find it in the index either by size, or by subject, or, if it has one, by the motto.

But there is a still greater objection to the arrangement under owners, namely the large number of devices the ownership of which is either uncertain or entirely unknown. From the nature of the case, an ownerless device is an absurdity, and surely a system of arrangement that compels us to lump together a large number of blocks of every date and style in a class of *Adespota*, may safely be rejected on that ground alone.

Books Listed: It is of course to be understood that the books mentioned under each device are not by any means all those in which the device occurs. The principles on which the lists have been drawn up are as follows:

When the ownership of a device at any particular period seems to be certain, I mention as a rule only the earliest and latest book known to me in which the device appears together with an imprint bearing the owner's name.¹ A bracket connecting the two entries indicates that (in my belief) the device was in the same owner's hands during the whole of the intervening period, and that further evidence as to its history is not necessary unless it tends to indicate that this was not the case.

When the ownership is uncertain, *e.g.*, when a device occurs in a number of books with different stationers' names, but without the name of a printer or probable owner of the block, I mention all the books in which I have found it, or at least a considerable selection of them. In this case there is no bracket at the side, and further evidence as to the ownership of the device during the period is required.

When nothing to the contrary is stated, the device will, as a rule, be found on the title-page of the books named. In the case, however, of a few which I have not myself seen it may be elsewhere; as the authorities from whom I have taken these entries do not always specify where the device occurs.

Imprints: The imprints here given have been simplified from the originals. My aim has been only to preserve so much of them as throws light on the share of the persons mentioned in the production of the book, and hence on the ownership of the device. Thus all clear statements as to the person by whom a book was printed, however expressed, appear simply as 'by —' or 'per —'; on the other hand, such words as 'cura,' 'sumptibus,' 'impensis,' 'apud,' 'in aedibus,' etc., are retained (in abbreviated forms) in order to avoid the risk of error in interpreting them. When, for special reasons, the exact form of an imprint is given, it is within quotation marks.

When an imprint includes the name of the apparent owner of a block, this name is printed in small capitals. Small capitals have, however, only been used when the ownership is practically certain, *i.e.*, when the device includes the person's name, initials, or mark, or when it occurs in connection with several imprints to which only

¹ When the device has been reproduced from some other book than one of these, that book also is mentioned. In a few cases others are given for special reasons.

this one name is common, or when what is known of the history of the printing-houses leads us to expect it to be in the person's possession at the time. It must not be supposed that when no name appears in small capitals the device was necessarily not owned by any of those whose names appear in the imprints.

The names of the printers have, as a rule, been given in their generally accepted English forms, however they occur (whether in Latin or English) in the originals.

When nothing to the contrary is stated, it is to be understood that the place of printing or publication is London.

Sizes: All sizes are given in millimetres; the vertical measurement first. The measurements are those of the smallest rectangle which, placed with its sides parallel to the edges of the paper, would inclose the device.

It is well known that considerable variation in size is to be met with in different prints from the same block. This is of course due to the fact that paper was generally (? always) printed damp, and that the damping caused it to expand. Hence a print when dry is always smaller than the original block, and, with paper of the same kind, the wetter it is at the time of printing the smaller is the resulting print.

So far as I am aware little or nothing has been done to investigate the behaviour of early paper under different conditions of moisture, and I have no means of carrying out exact experiments myself. A couple of very rough tests with paper dating from about 1640 and about 1700 respectively gave the following results. A piece 100 mm. square was taken and damped so as approximately to double its weight, *i.e.*, carrying about half the amount of moisture which it would take up if simply dipped quickly into water. The pieces of paper were then found to measure respectively 100.6 and 100.7 mm. in a direction parallel to that of the widely-set water-mark lines (*i.e.*, vertically in a folio book), and 101 and 101.2 mm. in the direction of the narrow lines (horizontally in a folio).

It is, however, by no means improbable that freshly made paper would show considerably more expansion with damp than this, for the difference between the smallest and largest prints from a block is much more than 1 per cent. It seems indeed sometimes to be as high as 5 or 6 per cent., while in the case of *cracked* blocks, in which the cracks would open or close according to the conditions of the weather and the tightness with which they were locked in the chase, it might be even more.

An interesting result of the fact that paper expands more in one direction than in another is that prints in a folio or in an octavo book will tend to vary in their *proportions* from prints from the same block in a quarto book. Thus, suppose we had to deal with a block measuring 100 mm. square printed damp on a sample of the first paper mentioned above, the size of the print in a folio or octavo book might be about 99.4 mm. high by 99 wide. If it were in a quarto book, however, these dimensions would be interchanged, the greater shrinkage being now in the height of the print, and the measurements would be 99 mm. high by 99.4 wide. This probably accounts for some of the irregularities in measurement that we meet with. At first sight it is

not easy to see how, for example, two prints can have the same height, but different breadth, or *vice versa*.

The sizes given are in most cases a rough average of several prints which I have measured. They are not necessarily the measurements of the particular print selected for reproduction.

Asterisk: An asterisk prefixed to an entry indicates that the facsimile has been made from the book named. When a device occurs more than once in the book, the particular example reproduced is indicated by a second asterisk. Thus in No. 18 the device has been reproduced from Lyndewode's *Provinciale*, where it occurs twice, and specifically from the second occurrence of it—in the Preliminaries of Part II.

In one or two cases of blocks taken from the *Handlists of English Printers* there is some doubt as to the book from which the reproduction was made. In these cases no asterisk will be found.

Query Marks: A query prefixed to an entry indicates that there is some doubt whether the device occurs in the book or not. It is used in the case of books which I have not seen, when the description of the device given by my authority is insufficient to distinguish it with certainty from a somewhat similar one, generally the same design in another size.

PRINTERS' DEVICES

1. (130 × 106.5 mm.) Mark of William Caxton, with his initials.

Though this device first occurs, so far as is known, in a book printed for Caxton at Paris, it is generally supposed to have been cut in England. Caxton probably stamped it in, after receipt of the books from abroad (Duff, *Printers of Westminster and London*, 1906, p. 18).

Herbert, pp. 11, 237: *Hand-lists*, W. de Worde, 1.

*1487 (Dec. 4) Paris: imp. W. CAXTON arte et industria W. Maynyal. *Missale ad usum Sarum* (end).

Figure No. 1a: from Lord Newton's copy. A piece of paper is pasted over the lower left-hand corner of the print.

[1490 by W. CAXTON.] *The Book of Eneydos* (end).

The rule on the left hand is still perfect. That below is broken as in No. 1b, but traces of the broken part remain.

Passed to Wynkyn de Worde in 1491.

*1495 by W. DE WORDE. *Vitas Patrum*.

Figure No. 1b.

1516 by W. DE WORDE. *Nova Legenda Angliae* (end).

The outer rules on left and at foot are almost gone.

1531 (Feb. 23) by W. DE WORDE. *The Pilgrimage of Perfection* (end).

2. (40 × 43 mm.) William Caxton's mark and initials with floral decoration above and below.

Herbert (p. 236), 2: *Hand-lists*, W. de Worde, 2.

- [? 1491 ? W. DE WORDE.] *Book of Courtesy*.

 1499 [W. DE WORDE.] *Liber Festivalis* (fol. 200 verso).
 1499 (May 20) per W. DE WORDE. *Psalterium* (end).

3. (51 × 40 mm.) Richard Pynson's monogram in white upon a black ground.

In general style the device somewhat resembles that of Guillaume Le Talleur, printer at Rouen, with whom Pynson had been associated (cf. Silvestre, 86). Herbert (p. 242), 2: *Hand-lists*, Pynson, 1.

(α) As figured, no white dot in cup at top of central upright.

*[? 1491] (by R. PYNSON). Chaucer (G.). *Canterbury Tales* (end).

In the copy at the British Museum the device looks as if it had been added after the book was printed. It is neither straight nor central on the page.

[? 1492] R. PYNSON. (*Latin Grammar*.)

Duff, *Printers of Westminster and London*, pp. 58-9.

(β) A white dot in cup at top of central upright (see No. 53, where this device is used within a border).

1492 (Nov. 13) per R. PYNSON. Alexander Grammaticus. *Doctrinale* (end).

Mr. Duff notes that between 1522 and May 1523 a white blotch appeared between the two lower legs of the R. The distinctness of this blotch varies, however, considerably in different prints.

1528 in aed. R. PYNSON. *Natura Brevium* (end).

Probably passed to ROBERT REDMAN in 1530.

1530 per R. REDMAN. *Parvus libellus continens formam multarum rerum*.

1537 (Dec. 8) by R. REDMAN. Whitford (R.) *A Work for Householdiers* (end).

1538 per R. REDMAN. *Parvus libellus continens formam multarum rerum*.

1539 (Jan. 24) by R. REDMAN. *A good book of Medicines called the Treasure of Poor Men* (end).

Passed to Redman's widow Elizabeth in 1540.

(δ) With top and bottom rules also cut away, reducing size to 49 × 37.5 mm.

[? 1541] by ELIZABETH, widow of R. REDMAN. *The Great Charter . . . Magna Carta* (end).

4. (85 × 38.5 mm.) A double cross with a circle within which is a shield charged with a saltier.

The arms of the town and abbey of St. Albans (Duff, *Provincial Printers*, p. 39).

- { * [1485] Sanctus Albanus. *Chronicles of England* (end: in red).

5. (93 × 69.5 mm.) Cut of St. Nicholas restoring to life three children who had been killed and pickled, with the mark and monogram of Nicholas Lecomte and, about the cut, *In Domino confido*. M. Nicolas Leconte.

For the story see Jameson, *Sacred and Legendary Art*, ii, 454-5, 459. Wace in his *St. Nicholas* (ed. N. Delius, 1850, ll. 216-29), often cited as an authority for the legend, tells it somewhat differently.

6. (115 × 94 mm.) Framed device of Richard Pynson's monogram surmounted by a helmet. Below, his name.

Herbert (p. 242), 6: *Hand-lists*, Pynson, 2.

- { 1494 by R. PYNSON. Boccaccio (G.). *Fall of Princes*.
Before the end of 1496 a crack began to appear in the right-hand top corner of this device, running almost parallel to the side. By the end of 1497 (see below) the piece had split off entirely. The device is not found between 1498 and 1515 (Duff, *Early English Printing*, p. 36, and *Printers of Westminster and London*, p. 62).

7. (60 × 55 mm.) Marks and initials of Fredericus Egmont and Gerardus Barrevelt.

The device 'so resembles in style and appearance the mark used by the printer John Hertzog that we may be pretty certain it was cut under his supervision at Venice' (Duff, *Printers of Westminster and London*, p. 93).

8. (67 × 43 mm.) Mark with the monograms I.N. and I.B., and the initials I. H.

The monograms stand for the names of Julian Notary and Jean Barbier. The owner of the initials I. H. has not been identified with certainty, but he may have been Jean Huvin, a stationer at Rouen, who was associated in the production of books for the English market (Duff, *Century*, p. 113).

9. (112 × 93 mm.) Device of Richard Pynson's monogram on a shield upheld by a boy and girl and surmounted by a helmet. Pynson's name below.

Generally used in a border with the Virgin and a saint in the lower corner.

With monogram, etc., as figured.

15. (12.5 × 17.5 mm.) Monogram of G F pierced by an arrow.

The monogram of Guillaume Faques. The meaning of the arrow has not been explained. Mr. Duff notes that it plays an important part in the device of Richard Faques, William's successor [see Nos. 31, 56] (*Printers of Westminster and London*, p. 170).

*1505-6 Paris: cura W. Hopylii, imp. W. Bretton. Lyndewode (W.). *Provinciale seu Constitutiones Angliae*.

For sale at London 'in signo sanctissime Trinitatis.'

18. (148 × 98 mm.) The arms of William Bretton (?).

These arms have been generally supposed to be Bretton's, and the supposition is a natural one, but I cannot find confirmatory evidence. The arms of such families of the name as I have been able to discover are quite different. Burke's *General Armory*, 1884, gives 'Ar., a fesse crenellée betw. three fleurs-de-lis sa.' and 'a fleur-de-lis per pale ar. and sa.' as the arms and crest of Lyndwood, but these arms differ entirely from those of the author of the *Provinciale* as given in W. K. R. Bedford's *Blazon of Episcopacy*. The coat of arms was afterwards copied and used as a device by the Paris printer Egidius Gourmont (Duff, *Printers of Westminster and London*, p. 196).

19. (103 × 89 mm.) Tripartite device with William Caxton's mark and initials in central portion; the sun, two blazing stars,

and twenty small ones at top; the name Wynkyn de Worde, etc., in the lower portion.

This device, as Herbert says (p. 236), appears to have been copied more than once. Mr. Gordon Duff recognizes three blocks.

Herbert (p. 236), 5: *Hand-lists*, W. de Worde, 5.

The midmost device of the three reproduced by Ames at the foot of his Wynkyn de Worde plate, and called by Herbert (p. 236) device No. 1, appears to be merely the centre portion of the upper part of this.

35. (250 × 182 mm.) The arms of Richard Pynson.

'Gyronny of eight gu. and sa. on a fess engr. betw. three eagles displ. or as many cinquefoils pierced az. (Papworth, *Dict. of Arms*, p. 807.) *Crest*: A demi eagle displayed holding in the beak a branch of pineapples fructed or, leaved vert.' (Burke, *General Armory*, 1884). The arms described by Burke differ somewhat.

36. (103 × 77 mm.) Bordered device of a shield with the mark of Robert Copland, suspended from a tree and supported by a stag and a hind. His name below, and in the border *Melius est nomen bonum quam diuitie multe*. *Prou. xxii.*

Round the shield is a garland of roses referring to his sign, the Rose Garland in Fleet Street.

37. (103 × 72 mm.) Device of a merman and mermaid upholding the monogram I.R. Above them the Deity between two shields containing the Royal Arms and the Prince of Wales's feathers. Below him the word *Fiat*. Below the merman and mermaid a landscape with 'Johannes. Rastell.'

After 1520 Rastell had a house with the sign of the Mermaid, but it is not known whether he used the same sign at the time when this device was cut.

38. (80 × 62 mm.) Device of a shield hanging from a tree, supported by a bear and an ass. The shield bears a mill and the sun.

The bear and the mill stand, no doubt, for the name of Ursyn Mylner, printer and stationer at York, 1513-16; the sun and the ass have not yet been explained, but it has been suggested that the sun may stand for the sign of Wynkyn de Worde and that the book in which this device occurs may have been issued in partnership with him (Duff, *Provincial Printers*, pp. 57-8).

Below Andrewe's Device, No. 74β. The date '1527' is probably reprinted from an earlier edition. In this block no part of the shield projects above the upper enclosing rule.

46. (94 × 70 mm.) Device with William Caxton's mark and initials in centre on a shield upheld by two boys at sides and a winged cherub above. At the top the sun, moon, and six stars apparently on the ceiling of a building supported on four pillars. Below, the name of Wynkyn de Worde.

60. (117.5 × 83 mm.) Device of a shield bearing the initials P. T., suspended from a tree and supported by a man and woman covered with long hair and bearing bows and arrows. Below is the name 'Petrus Treveris' on a scroll.

The man and woman are woodwoses, or woodhouses, semi-human creatures believed to inhabit the woods, and refer to Treveris' sign the 'Wodows.' They are not uncommon as heraldic supporters, and are to be found in the device of Philippe Pigouchet, printer at Paris, 1486-1512 (Silvestre, 71), and in those of Walter Chepman, Thomas Davidson, and others; see Nos. 29, 65.

61. (211 [or, with crown, 239] × 157 mm.) Framed cut of St. George and the Dragon. Above, the arms of Henry VIII, a portrait of the King, and the arms of London. In the upper corners of the frame, the mark of John Reynes, as No. 55.

The cut refers to the sign of St. George, at which Reynes traded.

- *1527 by P. Treveris, at the expenses of J. REYNES. Higden (R.). *Polychronicon* (end).

The cut of St. George is repeated on the title-page, but without the upper part of the block.

62. (198 × 142 mm.) Architectural compartment with W. R., the initials of William Rastell, printer, 1530-4.

The shields at the top appear to have been always blank.

- *1531 apud W. RASTELL. *Registrum omnium Brevium*.
- 1533 by W. RASTELL. *Fabyan's Chronicle*.

Perhaps passed to Thomas Gibson in 1534-5.

Passed to Henry Smith, perhaps by way of John Reynes.

1542 by J. Reynes. Chaucer (G.). *Works*.

1546 excud. H. SMITH. *Intrationum liber*.

It still has W. R. on the pillars.

63. (64 × 48 mm.) Device of three roses on a shield suspended from a tree and supported by two lions. Below, the mark and name of Petrus Kaetz, bookseller in London, 1524-5.

*1524 Antwerp: by C. Ruremond sumps. P. KAETZ. *Psalterium cum Hymnis ad usum Sarum*.

Kaetz returned to Antwerp in 1525, and in the same year this device is found on the title-page of a Dutch *Bible* printed by Hans van Ruremond for sale by him in that town at the sign of the House of Delft.

64. (67 × 44 mm.) A cut of St. George and the Dragon.

Presumably an old block; used by Robert Redman in reference to his sign of St. George.

*?1527 (April 18) apud R. REDMAN. *Modus tenendi unum hundredrum*.

Herbert, p. 387. Only known to me from a fragment in the Bodleian Library (Douce, Add. 142), from which the facsimile is taken. Here the colophon, with the name of the book and date, is separate from the cut, and it is not certain that the two fragments are from the same work. Printing on the back of the cut shows that it comes from an edition of the *Returna breuium*, a work which seems often to have been printed with the *Modus tenendi unum hundredrum*.

A print of the cut from some other book is found in the Bagford Collection, Harl. 5919, No. 110. This is within a border of type ornaments and has no printing on the back.

65. (97 × 66 mm.) A shield hanging from a tree and supported by two woodwoses or wild men. Three owls in the tree and one below.

On the shield are the initials T. D., standing for Thomas Davidson, printer in Scotland, c. 1530-42, 'linked with three pheons (the armorial charges of the Davidsons)' (Dickson and Edmund, *Annals*, p. 106). The 'wild men' are said to have been copied from those of Treveris, from whom Davidson seems to have obtained some of his printing material (Duff, *Century*), but they occur in many devices. To those mentioned under No. 60 may be added that of R. Chaudière I, printer at Paris, 1516-51 (Silvestre, 586). In some points Chaudière's device resembles Davidson's much more closely than does that of Treveris.

*[? c. 1530] apud T. DAVIDSON, Edinburgh. *Ad serenissimum . . . Jacobum Quintum . . . strena* (end).

Various dates, from 1528 to 1540, have been assigned to this book.

66. (80 × 67 mm.) Device of the mark of Richard Bankes, printer and bookseller, 1523-45, supported by two animals, of which one is a unicorn; above, St. John with an *agnus dei*; below, a snail.

1528 by R. Copland at costs and charges of R. BANKES. *The Rutter of the Sea*.
Bagford Collection, Harl. 5919, No. 131, fragment. The rule is unbroken on the right hand side, and there is only one break of any size (3 mm.) on the left.
*n.d. by R. BANKES. *A Compendious old Treatise, showing how that we ought to have the Scripture in English*.

67. (88 × 63.5 mm.) St. John the Evangelist, with eagle. Below, the name 'Robert: Wyre.'

Plomer, *Wyer*, device 1. Referring to Wyer's sign of St. John. Wyer spelt his name 'Wyre' in the colophon of St. Bernard's *Golden Pistle*, 1531, but not apparently afterwards.

(α) With the name, and the eagle.

Note: No good copy of the original has been found from which a facsimile could be made, and the present one must not be regarded as accurate in details.

*[c. 1531] by R. WYER. *Compost of Ptholomeus* (end).

(β) The name, the eagle, and part of the foreground cut away, reducing the size to 75 × 63.5 mm.

Mr. Plomer regards this as a separate block (device 3); but after careful comparison with the print in the *Compost* I can see no evidence that they are from different blocks, and much that they are from the same. As stated, however, the *Compost* print is in a bad condition, and there may perhaps be a shadow of doubt. The block as altered was perhaps intended to represent St. Bernard writing the *Golden Pistle*.

The cut appears to belong to a *Horae*, but as it is evidently used with reference to John Butler's sign of St. John the Baptist, it may be counted as a device. The book mentioned below is the only one in which it is known to occur, and no other of Butler's has a device of any kind.

Of this book there are only two copies now known, that at Trinity College, Cambridge, from which the facsimile is taken, and the one formerly in the Huth Collection. In both the device is in exactly the same state, the flower—presumably a pomegranate—in the right-hand upper corner being cut away.

74. (85.5 × 64.5 mm.) The mark of Lawrence Andrewe, printer 1527-1530, on a shield within a frame.

(α) The arms of the mark with plain ends.

*1527 (April 17) by L. ANDREWE. Braunschweig (H.). *The Virtuous Book of Distillation* (end).

(β) The ends of the arms pierced and indented.

*n.d. [no printer]. Braunschweig (H.). *The Virtuous Book of Distillation* (end).

The colophon states that the book was finished in 1527, but this is presumably not meant for the date of printing. The facsimile is from a copy in the possession of Mr. E. F. Bosanquet.

75. (97 × 72 mm.) Device of a shield, bearing the monogram of J. Skot, suspended to a tree and supported by two griffins.

Closely copied from the device of Denis Roce, or Rosse, bookseller at Paris, 1490-1518 (Silvestre, 451). The monogram of John Skot on the shield and his name below are both cut reversed.

[?1529] J. SKOT. *Enormities used by the Clergy* (end).

T.C.C. The parliament beginning Nov. 3, 21 Hen. VIII (i.e., Nov. 1529), is referred to as 'this present parliament.'

*[c. 1530] by J. SKOT. Stanbridge (J.). *Vulgaria*.

[c. 1537] by J. SKOT. *A book of the Properties of Herbs*. Herbert, p. 318.

76. (26 × 94 mm.) Device or sill-piece of the monogram of John Skot, with his initials at sides and his name on a ribbon.

*[c. 1530] by J. SKOT. Stanbridge (J.). *Vulgaria*.

77. (26 × 89 mm.) Device or sill-piece of Robert Copland's mark, with his name on a ribbon.

*1530 (Oct. 31) by R. COPLAND. *The Pomander of Prayer* (end).

78. (38 × 38 mm.) Mark and initials of John Byddell in white upon a black ground, within a circular border.

*[? 1535] by J. BYDDELL. Cicero (M. T.). *De senectute* (end).

[n.d.] by J. BYDDELL. Luther (M.). *De libertate Christiani* (end).

Herbert, p. 489.

79. (34 × 48 mm.) Device of the initials of John Byddell with his mark, in white on a black ground. His name below, black upon white.

1538 (May 30) by J. BYDDELL. Erasmus (D.). *Enchiridion*.

Bodleian, Douce Add. 142, No. 44a.

*1541 per J. BYDDELL. *Cura Clericalis*.

Bagford Collection, Harl. 5963, No. 54.

80. (110 × 77 mm.) Device of Lucretia with *Lucretia Romana* and *Thomas Bertheletus*.

Used with reference to the sign at which Berthelet traded.

{ *1535 by T. BERTHELET. Bartholomaeus Anglicus. *Bertholomeus de proprietatibus rerum* (end).

In some copies only; see W. W. Greg in *Bibl. Soc. Trans.*, viii. 214.

{ 1554 in the house of T. BERTHELET. Gwynneth (J.). *A manifest detection of the notable falshed of . . . John Frith's book* (end).

81. (119 × 79 mm.) A compartment with the Holy Dove at top and the initials I. M. and I. N. below.

For the design of the sides and foot compare No. 53. It is uncertain to whom the initials refer, but it seems possible that the I. N. stands for Julian Notary, though the compartment has not been found in anything bearing his imprint. In the case of another compartment (No. 98) the same initials perhaps stand for the name of the Southwark printer, James Nicholson, but he is not known to have begun business before 1535.

*1534 by R. REDMAN. [Lyndewode (W.).] *Constitutions provinciales . . . in English*.

The block is cracked to the right of the dove and initials.

[? n.d. ? by R. REDMAN.] *The Book of Justices of Peace*.

Title only in Bodl. Douce Add. 142, under 'Robert Redman.'

82. (111.5 × 77 mm.) A device of 'Our Lady of Pity,' with the name and mark of John Byddell.

Badly copied from the device of Jaques Sacon, printer at Lyons, 1498-1522 (Silvestre, 912). This is a copy of another device of Sacon's (Silvestre, 548), which in its turn is derived from a cut in the *Historia di Milano* of Bernardino Corio (fol. 8 verso of prelims.), printed at Milan by Alexander Minutius in 1503 (Duff, *Century*). It was used by Byddell in reference to the sign at which he traded in 1533-5.

*1534 (March 21) by W. de Worde for J. BYDDELL. Roberts (John). *A muster of schismatic bishops of Rome.*
At end of Pt. 2, *The Life of Hildebrand.*

83. (63 × 45 mm.) An emblematic device of a heart purified in a crucible. The crucible is heated by a fire which rests upon a tile bearing the word *Christus* and supported by two hands emerging from clouds. To the wrists are fastened chains attached to a sphere, on a band about which are the Zodiacal symbols. Below it, the sun in glory. On the forehead of the sun the letter G: at the sides the initials of Thomas Gibson. On a scroll the words *Horum charitas.*

This device resembles one used by Jehan André, bookseller at Paris, 1535-1551 (Silvestre, 128), but, in view of the date at which it appears in England, it is probable that both were copied from a common source. In André's device the object suspended by the chains is a cage containing a bird: there is no sun and the legend is *Horum maior charitas.*

(α) With G on the sun's forehead, and T. G. at the sides.

*1535 by T. GIBSON. *Concordance of the New Testament.*
St. Paul's Cathedral Library.

Passed to John Day at an unknown date.

(β) The letters T. G. removed, together with the greater part of the G on the sun's forehead.

{ 1569 by J. DAY. Gonsalvius Montanus (R.). *De Heylighe Spaensche Inquisitie* (end).
When used by John Day the device has the letters I. D. in type at the sides.
*1571 ex off. J. DAY. *Reformatio Legum Ecclesiasticarum.*
1584 by J. DAY. Latimer (H.). *Fruitful Sermons* (sig. *2 verso).

Probably passed to Robert Waldegrave c. 1584.

{ 1586 by R. WALDEGRAVE to be sold by R. Jones. Day (A.). *The English Secretary* (end).
Without initials.
[? 1588] by R. WALDEGRAVE for T. Man and W. Brome. Udal (J.). *The Combat between Christ and the Devil* (end).
With R. W. at sides.

Perhaps passed into the hands of Thomas East in 1603, and from him to Thomas Snodham in 1609.

1609 by T. SNODHAM for W. Firebrand, Cooper (W.). *Three Heavenly Treatises* (end).

84. (73.5 × 75 mm.) A device with the initials R. S. and the motto, *Dominus dedit dominus abstulit sicut domino placuit ita factum est.*

The device appears to have been used by John Hertford, printer at St. Albans 1534-9. The initials presumably stand for the name of Richard Stevenage, the last abbot of St. Albans, by whom Hertford was employed.

(α) With the initials R. S.

{ *1536 [no printer]. Gwynneth (J.). *Confutation of the first part of Frith's book* (end).

{ 1537 [no printer]. *An introduction for to learn to reckon with the pen.*

The last leaf, with this device, is in the Bagford Collection (Harl. 5919, No. 176); cf. Herbert, p. 1436.

Probably passed to Nicholas Bourman in 1539.

(β) The initials R. S. cut out and N. B. inserted in type.

*1539 by N. BOURMAN. Stanbridge (J.). *Accidentia* (end).

John Rylands Library.

85. (118 × 81 mm.) A compartment exhibiting the seven cardinal virtues. Below, the mark and name of John Byddell.

{ 1534 (March 21) by W. de Worde for J. BYDDELL. Roberts (J.). *A muster of schismatic bishops of Rome.*

Before both parts. The date is from Pt. 2, *The Life of Hildebrand.*

{ * [? 1535] by J. BYDDELL. Cicero (M. T.). *Tullius de Senectute.*

{ 1538 by J. BYDDELL. Sarcerius (E.). *Common Place of Scripture.*

{ [?] *Whether the Blood of Christ suffice.*

Bagford Collection, Harl. 5963, No. 58. Apparently later than Sarcerius. I cannot identify the book.

86. (130 × 82 mm.) A compartment with Thomas Petit's mark on a shield supported by cupids at the base.

{ 1538 by T. PETIT. *The Paternoster, the Creed, etc.*

Herbert, p. 553.

{ *1542 by T. PETIT. *The Great Abridgement of Statutes . . . 33 Hen. VIII.*

? Passed to William Middleton.

* * Parts of the compartment.

[Before 1547] by W. Middleton. Froissart (J.). *The First Volume of the Chronicles*.

The top-piece and left-hand pillar on the title. Extremely bad prints, but there can, I think, be little doubt that they are the same.

Passed to John King, ? after 1547.

1560 by J. KING. Lupset (T.). *Works*.

Top and both side pieces on title. For the sill is substituted an ornament (22 × 81) containing a snail, also used in the Froissart title-page.

1560 by J. KING. *Interlude of Impacient Poverty* (end).

The sill-piece alone (28 × 82 mm.) with T. Petit's mark.

? Passed to H. Denham at an unknown date.

1585-7 imps. J. Harrison, etc. Holinshed (R.). *Chronicle* (Vol. ii, *The Description of Scotland*, sig. A3).

The sill-piece alone. The *Description* is dated 1585. The printer was probably H. Denham, whose device appears at the end of the volume.

? Passed to W. Jaggard at an unknown date.

1624 by W. Jaggard for W. Turner (Oxford). C. (G.) 'Αστρολογουμανια (sig. ¶2).

Right-hand column, placed sideways at top of page.

87. (140 × 100 mm.) Arms of William Marshall.

From Burke's *General Armoury*, 1884, p. 662^a, it appears that the beast on the chief is meant for an antelope courant, not a tiger as Herbert calls it (p. 373). Burke gives the crest as a demi-antelope, but does not indicate to what branch of the family the arms belong.

*1535 (July) by R. Wyer for W. MARSHALL. Menandrinus (M.). *The Defence of P'ace* (end).

1567 by W. Gryffyth. Pikeryng (J.). *A new Enterlude of Horestes* (verso of title).

I cannot explain the presence of Marshall's arms in this book unless the block is used merely as an ornament.

88. (58.5 × 40.5 mm.) A barrel or tun having a tree growing from the vent-hole; with *Fruētibus eorum cognoscetis eos*.

The rebus of Richard Grafton. Cf. Nos. 95, 104, 114.

89. (45 × 43 mm.) A cut of Judith with the head of Holofernes.

Alluding to the sign of Henry Tab or Dabbe, stationer 1539-48. I have been unable to trace the source of the cut.

*[? 1542] by R. Wyer for H. DABBE and R. Bankes. Guido di Cauliaco. *The Questionary of Chirurgeons*.

90. (78 × 70 mm.) A cut of the sun surrounded by concentric circles and having in the corners the four winds.

Used in *The Mirror of the World*, printed by Lawrence Andrewe [c. 1527], as an illustration, and afterwards as a device by James Gaver in reference to his sign of the Sun. The facsimile is from a fragment found in a binding in the library of Viscount Clifden. The fragment is deficient on the right-hand side

*1539 by J. GAVER. Stanbridge (J.). *Accidentia* (end).

The colophon has 'Imprynted in London in [] by James Gauer / dwellynge at the sygne of the Sonne.' With the exception of the colophon, this edition seems to be identical with one printed nominally by Nicholas Bourman (Duff, *Printers of Westminster and London*, p. 140).

91. (119 × 74 mm.) A compartment of four pieces, the sill having the mark of Richard Grafton.

The pieces of which this compartment is composed were evidently separate, but they seem to have been regarded as belonging to one another and, at least in early times, to have generally been used together.

*1539 by R. Bankes. Taverner (R.). *The Second Book of the Garden of Wisdom*.

92. (155 x 110 mm.) A compartment of four pieces; the upper one containing two semi-human figures with floral ornaments, the sill having Richard Grafton's mark on a shield upheld by *putti*.

The side-pieces are probably intended to go with the sill, but the head-piece seems to be part of a longer ornament cut at the ends.

1542 by W. Bonham. *The Epistles and Gospels of every Sunday*.

Title in Bodl., Douce Add. 142, No. 55: presumably part of Bonham's *Primer*. The four pieces are arranged as in Hardyng.

1580 by H. BYNNEMAN. Harvey (G.). *Two other very commendable letters.*

98. (105 × 66 mm.) A compartment with two naked boys on the jambs. On the sill the initials I. N. on a shield.

It was suggested by Herbert (p. 496) that the initials stand for the name of the Southwark printer James Nicholson, some of whose material seems to have passed (c. 1538) into the hands of John Mayler (Duff, *Century*, p. 111).

Bagford Collection, Harl. 5963, No. 65. Possibly a proof: the device is not in the B.M. copy of the complete book, the space being left blank.

100. (74 × 49 mm.) Compartment with the sun at top; the monogram of Edward Whitchurch and 'Anno 1545' at foot.

101. (108 × 67 mm.) Compartment with the sun at top and the monogram (incomplete) of Edward Whitchurch below.

The cross stroke required for the H is wanting; cf. No. 100.

*1545 by E. WHITCHURCH. *Primer*.

1550 by R. Jugge. Hooper (J.). *Declaration of the Ten Commandments*.

1551 by W. Powell. *The New Great Abridgement*.

Ames Collection, i, 181-2. The sill has still Whitchurch's monogram. Possibly Whitchurch had some interest in this and the preceding work, for there seems no reason why he should have made over the compartment to other printers at this date.

102. (74 × 50 mm.) Device of the mark of William Middleton on a shield suspended from a tree with two semi-human creatures as supporters. His name on a scroll below.

*1546 (May 1) imps. W. MIDDLETON. *Intrationum liber* (? end).

See Sayle, 774. The book was originally printed by H. Smith, or for him (title and col.: the latter dated Nov. 1, 1545); but in some copies labels were pasted on the title with 'Excudebat Wilhelmus Middilton' and on the colophon with 'impensis Wilhelmi Middiltoñ.' As the facsimile in the *Hand-lists* is said to come from this book, I suppose that one of the labels also has Middleton's device.

1546-7 by W. MIDDLETON. Smith (R.). *A Defence of the Sacrifice of the Mass* (end).

The title-page is dated 1546; the colophon Feb. 1, 1547.

103. (25 × 41 mm.) A ram marked with a W and a goat marked with an L.

The initials are those of Walter Lynne, bookseller, c. 1540-1550. No explanation of the animals seems to have been suggested.

1548 for W. LYNNE. Luther (M.). *A Fruitful Exposition . . . on Jeremy xxiii* (end).

*1550 for W. LYNNE. Carion (J.). *Three Books of Chronicles* (end, sig. Pp4).

1569 by H. Denham for R. Tottell and H. Toy. Grafton (R.). *Chronicle* (end of vol. ii).

The device was probably used with reference to Grafton's *authorship* of the work; it may have been in Tottell's hands at the time.

105. (102 × 63 mm.) Compartment with Royal Arms at top, and two naked boys with crown, Prince of Wales' feathers and *Ich Dien*. Below, Richard Grafton's mark supported by two half-human creatures.

- { 1546 ex off. R. GRAFTON. *Orarium seu Libellus Precationum*.

were printed by arrangement with William Powell.
1560 (Sept. 2) by W. Seres. *Aggeus the Prophet declared by a large Commentary*.

107. (110.5 × 62 mm.) A framed cut representing the 'woman clothed with the sun' in *Revelation* xii, 1.

Presumably referring to Edward Whitchurch's sign of the Sun. In the *Certain Psalms* the cut is surrounded by a type motto made up from *Psalms* xxvi, 5 and *Cant.* iv, 7, and alluding to the printer's name: 'Thus saith the Lorde. I haue hated the malignant congregacion. All faire and White art thou my churche, and no spot is in thee.'

1553 in aed. R. Tottell. Fitzherbert (Sir A.). *La Nouvelle Natura Brevium*.
Perhaps printed by Whitchurch for Tottell, who had been granted a patent for law-books in 1552.

Probably passed to John Wayland in 1553.

(β) With Whitchurch's monogram cut out and John Wayland's (I W joined by loops) inserted.

- 1554 by J. WAYLAND. Hawes (S.). *The History of Graunde Amoure and la bell Pucel*.

Passed to Thomas Purfoot at an unknown date.

(γ) The initials I W cut out, leaving only the loops.

A Mirror . . . for all Estates.

See Bagford Collection, Harl. 5963, No. 66.

109. (231 × 145 mm.) Compartment with Royal Arms at top, and arms of Queen Catherine Parr at foot. With E. W. in the lower corners, standing for the name of Edward Whitchurch.

(α) As figured.

* 1548 by E. WHITCHURCH. Erasmus (D.). *Paraphrase upon the New Testament*.

1554 (Sept. 10) in aedibus R. Tottell. Lydgate (J.). *A Treatise showing the Falls of Princes*.

The title-page is not dated. The date occurs in the colophon of the 'Daunce of Machabree' annexed to the work, which is stated to have been 'imprinted by' R. Tottell. It seems clear that the preliminary matter, including the title-page, was executed by the same printer as the 'Daunce.' The history of the compartment is obscure.

(β) The arms of Queen Katharine Parr and the E. W. voided.

1554 in aed. J. Cawood. *Statutes, 1 Mary: In the Parliament begun . . . the second day of April*.

B.M., 505. f. 7(8).

1559 by R. Jugge. *Form of making Bishops*.

Herbert, p. 717.

1562 by J. Kingston. *Bullein (W.). Bulwark of Defence*.

110. (210 × 136 mm.) Compartment exhibiting King Edward VI in council at top and Richard Grafton's rebus on a shield upheld by two cherubs below.

? 1548 in aed. R. GRAFTON. *Statutes, 1 Ed. VI*.

It is to be noted that the dates appearing in the volumes of Grafton's

Statutes are frequently not the actual date of printing, but that of the earliest edition.

*1550 excud. R. GRAFTON. Marbeck (J.). *A Concordance to the Bible*.

1553 (April) in aed. R. GRAFTON. *Statutes*, 7 Ed. VI.

Passed eventually to Richard Tottell. It is not clear who owned it between 1553 and 1565.

1557 by J. Wayland. Guevara (A. de). *The Dial of Princes*.

1559 by J. Kingston. Fabyan (R.). *The Chronicle of Fabyan* (both vols.).

1565 (Nov. 10) in aed. R. TOTTELL. Rastell (J.). *La table cōteynant les choses en la graunde Abridgement*.

1580 in aed. R. TOTTELL. *Le Liver des Assises et Pleees del Corone*.

111. (174 × 116 mm.) Compartment with figures at sides supporting baskets of fruit. Below, a tablet upheld by two cherubs, and bearing, at one time, the letters T R.

As used c. 1548 it had T on the tablet at foot of the left-hand figure, and P on that at the foot of the right-hand one. The P was later cut out. The history of this border is very puzzling. It may have been originally foreign, for no English printer with the initials T. P. is known to have used it, nor, unless we assume that the 1555 *Processionale* was printed by Thomas Raynald, which seems very doubtful, was it ever used by a printer whose initials were T. R. In any case we should expect the letters on the tablets at the foot of the figures and on the sill to be the same, and I do not feel sure that the oblique stroke of the R. in the sill tablet is not an addition. If this was the case it is possible that the border originally belonged to Thomas Petit. It may be remarked that King, who used this border in 1560, possessed another that had belonged to Petit, see No. 86.

(α) With T and P in the tablets at the foot of the side figures.

[? 1548] (Sept. 15) by W. HILL. Tyndale (W.). *The Parable of the Wicked Mammon*.

The letters in the tablet at the foot masked out.

(β) The P removed from the tablet at foot of the right-hand figure.

1555 [? by T. RAYNALD]. *Processionale* (Sarum).

The only reason for attributing this to Raynald seems to be the TR on the sill. Mr. Sayle places the book under Raynald, but at p. 240 also suggests Marshe. The heads on the sill are in red.

*1560 by J. KING. *Interlude of Impacient Poverty*.

Also with an odd piece in place of the sill, in John King's *Proud Wife's Paternoster*, 1560 (Herbert, p. 764).

- ? Passed to Thomas Marshe in 1561.
 1566 by T. MARSHE. BECON (T.). *A new Postil*.
 Passed to Henry Middleton at an unknown date.
 (γ) With T R removed from tablet on sill.
 1575 by H. MIDDLETON for R. Newbery. Fenton (G.). *Golden Epistles*.
 The tablet is empty.
 1575 by H. MIDDLETON for J. Harrison. Veron (J.). *Dictionary*.
 The tablet has I.H. in type.

112. (56.5 × 36 mm.) Device of a caduceus held by a hand emerging from a cloud; at the top a book and a dove. On a tablet the words *Love and Lyve*, and on two scrolls the words *Nosce te ipsum* and *Ne quid nimis*. Across the device the name BAL-D WIN.

Baldwin apparently used 'Love and Live' as his motto; cf. his *Treatise of Moral Philosophy* (Herbert, p. 566).

(α) As described.

*1549 by W. BALDWIN, servant with E. Whitchurch. *The Canticles or Balades of Salomon* (end).

The motto surrounding it is in type.

Passed to John Charlewood at an unknown date.

(β) 'BAL' and 'WIN' cut away.

113. (82 × 62.5 mm.) An emblematic device of a hand issuing from the clouds trying a coin on a touchstone labelled *Verbum Dei*; the wind blowing.

1548 Ipswich: by A. SCOLOKER. Zwingli (U.). *Certain Precepts* (end).

*1548 (June 30) by A. SCOLOKER and W. Seres. Frith (J.). *A Book made by John Frith*.

Under the device, in type, is: 'Proue the spirites whether they be of God. Ihon y^e. iiij. i. Reg. viij. d. Mat. vij.'

114. (99 × 67 mm.) Device of a grafted tree growing through a tun, the rebus of Richard Grafton, with his mark on the barrel, and *Suscipite insitum verbum Ec. Iaco. I.*

Cf. Nos. 88, 95, 104.

*1549 excud. R. GRAFTON. *The Form and Manner of Making Archbishops, etc.* (end).

115. (137 × 176 mm.) An ornament with the arms of Edward VI between two pillars, at the base of which are the letters I. D., the initials of the printer John Day.

As no perfect copy of a print from the block in its original state was available for reproduction the facsimile has been made from a print in the John Rylands Library, the border on the right hand being added. It will be noticed that the upper portion of the scroll by the top of the right-hand pillar is wanting.

(α) As figured, with E. R.

*1549 J. D[AY]. Edward VI. *O Lord for thy mercyes sake, saue the Kyng.*

A single sheet inserted in a copy of Taverner's *Bible* of 1551. (cf. Sayle, 778).

(β) The date voided and the E of E. R. replaced by M.

1557 [?] *Missale ad usum ecclesiae Sarisburiensis* (fol.).

(γ) 'Again altered.'

1563 by J. DAY. Foxe (J.). *Aets and Monuments* (verso of title).

Sayle 800. Not in either of the copies at B.M.

116. (252 × 144 mm.) Compartment with the Royal Arms at top, and, at foot, a boy waking another; the motto *Arise, for it is day*: sometimes with E. R. in type at top.

(α) With motto as figured.

*1551 by J. DAY. *Bible*.

1552 ex off. W. Riddell. Huloet (R.). *Abcedarium*.

Nothing is known of Riddell's connection with Day.

[? c. 1557] by J. Wayland. Bieston (R.). *The Bait and Snare of Fortune*.

It is doubtful who owned the compartment when this and the following work were printed. The *B.M. Cat.* dates the book ? 1550.

[? c. 1557] by J. Wayland. Boccaccio (G.). *The Tragedie of Princes*.

Herbert, p. 565, gives this as dated 1558.

1560 by J. DAY. *Certain notes to be sung at the morning Communion*.

. Herbert, p. 633. Steele, *Earliest Music Printing*, p. 42.

1572 by H. Denham. Walther (R.). *An hundred threescore and five sermons upon the Acts*.

Perhaps lent to Denham, who does not seem to have possessed a folio compartment at this date.

1573 by J. DAY. Tyndale (W.). *The Whole Works*.

(β) The motto cut out.

1574 by J. DAY. Walsingham (T.). *Ypodigma Neustriæ*.

With *Mundus transit* inserted in type in space for motto.

1583 by J. DAY. *Psalms* (Sternhold and Hopkins).

With *Arise for it is day* inserted in type (no comma after *Arise*).

? Passed to John Windet or Richard Day, c. 1584.

1595 by J. Windet for the ass. of R. Day. *Psalms* (Sternhold and Hopkins).

Space for motto blank.

1604 for the Company of Stationers. *Psalms* (Sternhold and Hopkins).

Sayle 2166.

117. (75 × 63 mm.) A cut of St. George and the Dragon.

I insert this with much hesitation. It occurs in the Bagford Collection, Harl. 5963, No. 81, together with an imprint as follows: 'Imprinted at Lōdon in Fletestrete at the Sygne of the George . . . by Wylliam Powell . . . M.D.L.I. the syxte daye of Septēber.' It is not certain that the two fragments were taken from the same book, but this seems at least possible; and from the way in which they are pasted into the scrap-book, it is evident that Bagford regarded them as belonging together. I have been unable to identify the book to which they belong, or to find the cut in other works from Powell's press, and it need hardly be pointed out that the character of the design is very different from that of most English cuts of the middle of the sixteenth century. Powell

is believed to have traded at the George in Fleet Street from 1547 to 1567.
The foreground of the cut appears to be slightly shaved at the ends.

*? 1551 by W. POWELL.

See note above.

118. (56 × 38 mm.) Device of the Brazen Serpent.

For the history of this device, which was used by several printers including Conrad Néobar, printer at Paris, 1538-1540 (Silvestre, 99), and by Vincentius Valgrisius at Venice from 1545 to 1587, see *Bibl. Soc. Transactions*, iv, 103 ff. As used by Reyner Wolfe it generally had NUM. XXI. across it in type, as shown. Cf. No. 119.

126. (11 × 6.5 mm.) Mark of John Cawood.

There are apparently at least two blocks of this, but as they are not easy to distinguish in reproductions (or in the original prints) only one is here given. It is most frequently used for insertion in the sill of one of Cawood's compartments. Cf. No. 129, where the mark is apparently part of the block.

129. (58 × 145 mm.) Sill-piece of a compartment of naked boys, one astride a barrel, on the end of which is the mark of John Cawood.

The four pieces of which the compartment was composed were separate, and the side-pieces are sometimes used with cuts of the four Evangelists as head- and foot-pieces.

As Cawood lived until 1572 it seems probable that the appearance of the sill-piece with his mark in these two books indicates that he had some share in them.

130. (124 × 83.5 mm.) Compartment with, at foot, a shield or scroll supported by two boys and bearing the mark of Sibertus Roedius.

The mark and portions of the lettering have been painted over in the copy at the Bodleian from which the facsimile is taken, the only complete copy of the book which I have been able to hear of. There is a title-page in the Bagford Collection, Harl. 5919, No. 175, and in this the upper part of the mark is different, having only a cross stroke instead of the '4.' The mark has, however, been altered with the pen, apparently in order to make it into the initials of some owner, and part may have been erased. I have found no third copy with which to compare these, and it should therefore be noted that the facsimile may be inaccurate so far as this mark is concerned.

The colophon has 'Imprinted by Richard Watkins.' The block still has Jugge's monogram at top. He lived until 1577, and this book was perhaps printed under some arrangement with him by Watkins, who was his son-in-law.

135. (48 × 37 mm.) Device of a half rose and half pomegranate with I. R. and a shield containing three tiaras.

The half rose and half pomegranate represents the sign of James Rowbotham,

bookseller (and printer?) 1559-80. The three tiaras are the arms of the Drapers' Company, to which Rowbotham probably belonged.

*1566 by H. Denham for J. Wight. Alessio, Piemontese, *The Third Part of Secrets*.

The 1560-1562 edition of the *Secrets* had been printed for N. England, and he may have retained an interest in the book. Otherwise it is difficult to account for the presence of this device.

1567 by H. Bynneman for N. ENGLAND. Painter (W.). *The second Tome of the Palace of Pleasure* (end).

Nicholas England died or went out of business in 1568-9. The device apparently remained in the hands of Henry Bynneman.

*[? 1563] by L. Askeff for T. PURFOOT. *How and whither a Christian man should fly the Pestilence.*

141. (34 × 50 mm.) A cut of two naked boys seated on the ground.

Mr. Gordon Duff regards this as Henry Sutton's device (*Century*, p. 154), and I have therefore included it, though with some hesitation. It seems to be of rare occurrence in Sutton's books—I have only found it once—and his sign was one black boy, not two white ones.

*1561 by H. SUTTON. Seneca (L. A.). *Tragedia prima quae inscribitur Hercules furens* (end).

142. (44 × 54 mm.) A boy with wings upon his right arm and with his left hand holding, or fastened to, a weight.

An emblem signifying talent kept from rising by the burden of poverty (Alciat, ed. 1567, emblem 64, and in earlier editions). The emblem was used as a device by Barthélemy Berton, printer at Rochelle, 1564-71; see Silvestre, 864. Cf. No. 393.

Issued with T. W.'s *Passions of the Mind*, printed by Valentine Simmes for
W. Burre.

143. (101 × 56 mm.) Rebus of Richard Harrison, printer 1561 and 1562; a hare, a sheaf of rye, and the sun.

Cf. nos. 169, 171, 275, 319. Referred to by Camden in his *Remains*, sect. 'Rebus': 'an Hare by a sheaf of rye in the sun for Harrison.'

*1562 by R. HARRISON. Calvin (J.). *The Institution of Christian Religion*.

144. (43 × 49 mm.) A griffin holding a spray of sweet-william in its beak and between its claws a shield bearing the mark of William Gryffyth.

In 1552-3 Gryffyth used the griffin as his sign, but by 1556 he had moved to 'the Falcon against St. Dunstan's Church.' It is doubtful whether his use of the griffin as a device refers to his early sign or to his name. Cf. Nos. 157, 158.

146. (114 × 79 mm.) Device of boys throwing sticks at a tree.

Cf. Nos. 96, 97.

- { *1563 by R. WOLFE. Musculus (W.). *Common places of Christian Religion*.
In red and black. Within rules (127 × 95 mm.), enclosing type motto, as shown. The rules do not appear to be part of the block, but the device must have been intended to be framed in some way, as the foreground is otherwise incomplete.
1570 excusum apud R. WOLFE. Paris (M.). *Historia Maior* (col. on sig. 5Y8).
Without rules round it or motto. The block is cracked vertically. The title-page is dated 1571.

147. (300 × 180 mm.) Compartment with figures with folded arms at sides, and fawns. Below, R. T., the initials of Richard Tottell.

Offices belonging to Horsemanship*.
1615 for the Comp. of Stationers. *The Psalter after the translation of the Great Bible
. . . With the Morning and Evening Prayer* (general title, and that of the
Psalter).

It still has Seres' monogram. The book was presumably printed by
H. Lownes. On the title of the *Psalter* is the device of a shield with two keys
(No. 373), and on sig. A 2 of the same an ornament with *Cor unum via una*
(31 × 81 mm.) used by Lownes from 1611 to 1630.

149. (71.5 × 53.5 mm.) Framed device of a mermaid, with the
Stationers' arms, the legend *Omnia Tempus Habent*, and the mono-
gram of Henry Bynneman.

Bynneman traded at the sign of the Mermaid from 1567 to 1580. Cf.

* * * A coarsely cut copy of the frame of this device is found on the title-page of the following:

[? c. 1592] for T. N. and I. W. *A Pleasant Comedy of Fair Em*.

It has the engraver's initials W. D., which are found on some inferior ornaments and borders used about 1590.

150. (36 × 36 mm.) Device of a star with *Os homini sublime dedit*.

The star was the sign of Henry Denham, 1560-89; cf. Nos. 211, 214.

The purport of the motto (from Ovid, *Met.* i. 85) is clear if the quotation is completed.

'Os homini sublime dedit, caelumque videre

166. (70 × 60 mm.) Framed device of a boy seated on a dolphin, encircled by a snake swallowing its tail. The motto *Immortality is gotten by the study of letters*. Below, an oval containing the monogram of WILLIAM and the sun, standing for the name of William Williamson, printer 1571-4. Within the oval is also the date 1573.

The device is based on an emblem of Alciat (*Emblemata*, ed. 1574, p. 133, and in earlier editions), entitled '*Ex literarum studiis immortalitatem acquiri*,' but the central figure is there a Triton, not a boy. 1634 by N. Okes for C. Bee. Polybius. *History.*

The preliminary leaves perhaps by Beale; see Sayle, 3696.

169. (120 × 78 mm.) Compartment having the Royal Arms at top and the Stationers' below, and the devices or rebuses of six printers at the sides.

The devices or rebuses are those of C. Barker (cf. No. 190), W. Norton (cf. Nos. 174, 175), Gerrard or Garrat Dewes (two men dicing in a garret

and casting a 'deuce,' or two; cf. Camden, *Remains*, ed. 1870, p. 181), J. Wight (see No. 205), J. Harrison (see No. 143), and R. Watkins (alluding presumably to the name 'Wat' applied to a hare, as in Shakespeare's *Venus and Adonis*, l. 697). These men were the assigns of Francis Flower, patentee for books in Latin, Greek, and Hebrew, and for grammars. For a larger size of the same design see No. 171.

- { *1574 excud. T. Vautrollier, per assignationem Francisci Florae. *Liber precum publicarum*.
- { 1574 by THE ASSIGNS OF F. FLOWER. Lily (W.). *A Short Introduction of Grammar*.

170. (108 × 75 mm.) An anchor held from the clouds, with *Anchora Spei*.

The anchor as a symbol of Hope is of course derived from *Hebrews* vi, 19. It is one of the commonest and most obvious of emblems, but I have not found any particular source from which Vautrollier may have taken it. Cf. Nos. 164, 192, 195, 210, 222, 232, 233. It is pointed out by Mr. Roberts, *Printers' Marks*, p. 73, that the border of this device is a close copy of one used at Basle by T. Guarin in 1564 (see Heitz, *Basler Büchermarken*, No. 204).

171. (163 × 107 mm.) Compartment with the Royal Arms at top, the Stationers' below, and the devices or rebuses of six printers at the sides.

Cf. No. 169. It has unfortunately been impossible to find a satisfactory copy of this print for reproduction. It probably dates from the same time as the smaller one, and was originally just as good a block.

172. (62.5 × 53 mm.) An angel crowned, holding in his right hand a blazing heart and in his left a cross.

The heart is labelled *Charitas*, the cross *Fides*, and elsewhere we read: *Victoria, Premiū spes, Lumen Æternum, Dum tempus abemus offeremur donum, Diabolus*. By the feet of the angel is the monogram of Henrie Disle, and round the design the motto *Ego sum via et Veritas*. The device is perhaps intended to represent Religion treading the devil underfoot.

174. (69 × 53 mm.) Device of a cask or tun with a sweet-william growing through it. On the tun the word 'nor,' and on the root of the plant the letter W.

A rebus of the name William Norton; cf. Nos. 169, 171. Distinguished from the re-cutting, No. 175, by the S on the central flower.

- { 1574 apud W. NORTON. Horatius Flaccus (Q.). *Poemata.*

Passed to Bonham Norton in 1594.

1596 by R. Field for B. NORTON. Cogan (T.). *The Haven of Health*.
It still has W on the root.

175. (74 × 57.5 mm.) A tun with 'nor' and a sweet-william.

A re-cutting of No. 174, from which it is distinguished by the central flower of the sweet-william being without the letter S.

*1579 by T. Vautrollier for W. NORTON. Guicciardini (F.). *History*.

The block apparently had a heavy rule all round, but part is masked out.
Some copies of this book have the 'Anchora Spei' device, No. 170.

176. (99 × 70 mm.) Device of an anchor and brazen serpent upheld by hands emerging from clouds.

Copied from a device of Jean Crespin, printer at Geneva 1551-1571 (see Heitz, *Genfer Buchdruckerzeichen*, 47), with the initials of Thomas Bassandyne added. Compare Bassandyne's smaller device, No. 178.

*1574 Edinburgh: by T. BASSANDYNE. Lindsay (Sir D.). *The Warkis* (sig. P3 verso).

Britwell Court.

177. (27.5 × 36.5 mm.) A cut of Mars (?) in a car.

The zodiacal signs of the bull and the scorpion on the wheels of the car suggest that the cut originally belonged to some almanac, but I have been unable to trace any earlier occurrence of it. As used by East it is perhaps hardly to be considered a device, but as the sign at which he was trading in the years 1575-6 is unknown, it seemed better to include it.

{ *1575 by T. EAST. Borde (A.). *The Breviary of Health*.

{ 1576 by T. EAST. Rowlands (R.). *The Post of the World*.

178. (33 × 31 mm.) Device of an anchor and brazen serpent upheld by hands emerging from clouds.

Copied from a device of Jean Crespin, printer at Geneva 1550-1571 (see Heitz, *Genfer Buchdruckerzeichen*, 50; Silvestre, 891; and Dickson and

Edmond, *Annals*, p. 291), the initials T. B. being substituted for I. C. Compare the larger device, No. 176.

179. (49 × 50 mm.) Ornament of a woman's head with cornucopias and the initials T. V.

The initials are perhaps type inserted in the block. There are a large number of blocks of this ornament which can only be distinguished by careful comparison; some may be metal, but the present at any rate was apparently a wood-cut, for later prints show horizontal cracks. Vautrollier had at least two blocks, one with initials and the other without (see below under 1585). Compare Andrew Hart's ornament, No. 378.

The block is here much worn; the lower part of the nose is gone.

181. (162 × 104 mm.) Compartment with the Royal Arms at top; a pelican in her piety at foot with, to left, Cupid (?) holding the letter R, and, to right, a nightingale in a (? thorn) bush, with the word 'Iugge.'

The pelican was a device of Richard Jugge, cf. No. 125; and the nightingale is an allusion to his name, the word 'jug' being commonly used as an imitative representation of one of the notes of the bird's song.

186. (56 × 50 mm.) Device of time bringing truth to light, with *Tempore patet occulta veritas* and R. S.

This was the device of C. Badius, printer, used at Geneva in 1554 (Heitz, *Genfer Buchdruckerzeichen*, No. 7). It is also said to have been the badge or impresa of Queen Mary, with the motto *Veritas temporis filia* (Camden, *Remains*, under 'Impreses'). Cf. Nos. 312, 331.

194. (82.5 × 70 mm.) Framed device of a 'tiger's' head with a ducal coronet about his neck, erased out of a mural crown, with a crescent for difference, being the crest of Sir Francis Walsingham. Below the tiger's head is a lamb, and on a scroll joining the two the motto: '*Tigre: reo. animale del. Adam. vecchio. figliuolo ~ merce. l' euangelio ~ fatto. n'estat. agnolo.*'

The word 'agnolo' was found to be an error, and the part of the scroll bearing it (all behind the lamb) was cut out and replaced by a new one with 'agnello.'

- *1588 by T. Orwin for T. Cadman and E. AGGAS. La Noue (F. de). *Politie Discourses* (end).

The title is dated 1587, the colophon 1588.

[? 1590] for E. AGGAS. C. (E. D. L. J.). *A Catholic Apology*.

200. (74 × 61.5 mm.) Arms: ermine, on a chief indented two eaglets; crest, out of a ducal coronet an eagle rising ermine; motto: *Mibi Vita Christus*.

Presumably the arms of John Day; see Berry, *Encyclopedia Heraldica*, under the name of Day (London).

Cf. No. 245; the arms (presumably) of his son Richard.

201. (51 × 47 mm.) Rebus of Thomas Dawson and Thomas Gardiner.

Apparently cut for use as a factotum initial rather than as a device.

*1577 by T. DAWSON and T. GARDINER. S. (C.). *The Testimony of a True Faith* (sig. B9).

With T. D. T. G. in the square.

1577 for J. Harrison and G. Bishop. Calvin (J.). *Commentary upon . . . the Corinthians* (as a factotum initial on sigs. A1 and Cc8).

Gardiner died or retired from the partnership in 1577 or 1578.

203. (73 × 62 mm.) A phoenix looking at the sun.

Copied, with the omission of a winged globe and motto, from a device used by Gabriele Giolito de' Ferrari, of Venice, in Castiglione's *Cortegiano*, 1544, the *Dialoghi di M. Lodovico Domenichi*, 1562, etc. (different from that reproduced in *Bibl. Soc. Trans.*, x. 91). In the *Emblemata* of J. Sambucus, ed. 1569, p. 28, under the heading *Nimium Sapere*, the phoenix looking at the sun appears as an emblem with the lines:

Cominus adversum qui spectat lumine Phoebum
 Nititur et radiis vincere, caecus abit.

But the first edition of Sambucus was not till 1564.

(γ) With a new lower block, having a lion and a unicorn, both facing outwards, instead of the lion and the dragon. No initials.

1632 by R. BARKER and the ass. of J. Bill. *Bible* (before *New Testament*).

205. (81.5 × 68.5 mm.) A man in a gown carrying a book lettered 'Scientia'; beside him the letters I. W. with the motto *Welcom the wight: that bringeth such light*.

The figure is regarded as a portrait of the printer John Wight, 1551-1589.

'Probably printed by Stansby.' Sayle, 3088; but Bradock was still in busi-
ness at this date.

208. (85 × 71 mm.) Framed device of Christ rising from the
tomb, a palm branch in his hand, and treading upon a skeleton
signifying death, and a dragon signifying the devil. About it,

*Confidite vici mudū . Ioa . 16 : Vbi tua mors victoria? 1 . Cor : 15 :
Conteret caput tuū . Gen . 3 : Ero morsus inferni tuus . Oze . 13.*
Above and below, *Jesus Christus*.

The cut corresponds so well with the subject of J. Foxe's *Christ Jesus Triumphant*, J. and R. Day, 1579, on the verso of the title of which it occurs (Herbert, 667-8), that it seems by no means improbable that it was designed especially for this work. It appears, however, to have been first used in the preceding year.

216. (42 × 32 mm.) A fleur-de-lis seeding.

Copied from one of the devices of the Giunta family (cf. No. 298). It appears most to resemble the central part of a device of Jacques de Junte, printer at Lyons, 1533-46; see Silvestre, 449 (cf. also Silvestre, 707); but there may be others which it approaches still more closely. In 1581-2 it is used with VBIQVE FLORESCIT, and in 1583 with VBIQVE FLORET, up and down the sides in type; later generally without a motto.

Perhaps passed to Ralph Blower in 1601.

- n.d. by R. B. for T. Man. Arthington (H.). *The Seduction of Arthington by Hacket*.
 The B.M. Catalogue dates this book 1592, that being perhaps the date of the first appearance of the work, but it seems probable that it is a good deal later. The R. B. is presumably Ralph Blower, who was using another of Wolfe's fleur-de-lis devices in 1609 (see No. 298).

217. (37 × 35 mm.) Device of three lilies on one stalk, thorns growing about the base; with *Sicut lilium inter spinas Cant. 2*.

It is stated by Herbert (p. 680) that Richard Day used this device of three lilies on one stalk as his sign, but this appears to be an inference from the device. I have seen no book in which his address is so given.

*1579 by H. DENHAM, the assign of W. Seres. *The Psalter*.

From a copy in the possession of Mr. E. F. Bosanquet. A title-page probably from the same setting of type, save for the imprint, which runs 'Imprinted at London by E. S. for the assigne of Wylliam Seres,' is in a collection of title-pages at the British Museum (618. k. 17), fol. 38. I do not know for what name the initials E. S. can stand.

219. (47 × 34.5 mm.) Ornament of a cherub's head on a bracket.

It is doubtful whether this should be regarded as a device or not, but it may have been so used by William Kearney, whose sign is unknown. It is perhaps a cast block. It is impossible to be sure that the blocks used by Vautrollier and Kearney are identical; but, if not, they must have been cast from the same matrix.

Note: A device almost exactly similar to this, save that the head below is that of an old man, is found in editions of Sternhold and Hopkins' paraphrase of the *Psalms* appended to certain Geneva bibles having Barker's imprint and the date 1599, but supposed to have been printed later at Dort. 228. (111 × 85 mm.) Framed device of a pelican in her piety.

Closely copied from Jugge's device, No. 125. At top the name of Alexander Arbuthnet, and at foot his initials and arms. The block is signed A. VL., which is thought to stand for the name of Assuerus vol Londersel, a Flemish artist who executed woodcuts for Nicolas de Nicolay's *Travels* printed at Antwerp in 1576 (Dickson and Edmond, *Annals*, p. 317).

251. (27 × 26 mm.) Ornament of a fleur-de-lis.

This was presumably cast, and there seem to be two or more blocks, which are exceedingly difficult to distinguish, as they only differ in details of shading. It must, however, count as a device, as it was used by John Wolfe and N. Okes, both of whom used other forms of the fleur-de-lis on their productions.

In the following notes I have differentiated those prints in which the shading

of the central stem slopes downwards from right to left (as in the facsimile) from those in which it slopes from left to right. But there may well have been more than one block of each type.

This is closely copied from a device used by Gabriel Giolito de' Ferrari, printer at Venice, 1539-78, in *La Vlyxea de Homero*, 1553 (facsimile in *Bibl. Soc. Trans.*, x. 105), the *Dialoghi de M. Lodovico Domenichi*, 1562, and elsewhere. It is undoubtedly a different block. In the original the left wing of the bird touches the scroll; the shading of the urn differs, and that below the ground-line is much less prominent. It seems to have been originally cut, as were Nos. 226 and 249, for use in Wolfe's Italian books.

253. (86 × 61 mm.) Device of a bell with *Praise the Lorde with Harpe and Songe*. In the upper corners the arms of London and those of the Stationers' Company: in the lower, the initials A. I.

254. (42 × 37.5 mm.) A phoenix in flames emerging from a vase which is supported on the shoulders of two satyrs holding roses (?). *Della mia morte eterna vita vivo, and Semper eadem. T.O.*

A rough copy of one of the devices of Gabriele Giolito de' Ferrari, printer at Venice—or perhaps rather combined from two of his devices (cf. *Bibl. Soc. Trans.*, x. 105 and 95), with the initials of Thomas Orwin in place of G. G. F. Cf. No. 252.

255. (123 × 74.5 mm.) Compartment with the Royal Arms above; at the sides, Moses and David; below, the Stationers' Arms with the initials H. D. and a star.

The compartment was obviously made for Henry Denham, who traded at

the sign of the Star and must date from before 1589, when he went out of business.

Note: The only print of the block which I was able to find is in bad condition. In reproducing it, it has been necessary slightly to touch up David's face, the surface of the paper being there worn away.

256. (111 × 62 mm.) Compartment with the Royal Arms at top; David and Goliath below; four small pictures and the initials H. D. at the sides.

In general character the compartment resembles those used by Denham in the *Monument of Matrons*, 1582 (see No. 231), and it was probably cut at about the same date. In any case it must date from before 1589, when Denham went out of business.

[Before 1589: see above.]

*1598 [?]. P[arsons], (R.). *A Book of Christian Exercise* (general title).

The first part has merely 'Imprinted at London,' as shown; the second 'Printed by I. Roberts for Simon Waterson.'

257. (61 × 56.5 mm.) Framed device of a right hand pointing to a star, with *Deus Imperat Astris* and R. D.

The right hand obviously alludes to the name of Richard Dexter, but the meaning of the star has not been explained: Dexter's sign was the Brazen Serpent. Is it fanciful to suggest that it may be an allusion to the blazing star which was seen from 10 to 21 October 1580? Dexter was apprenticed from Michaelmas of that year and he may have taken it as an omen of good fortune.

258. (38 × 24 mm.) A fleur-de-lis roughly cut, with two marigolds (?).

At its first appearance this was perhaps merely an ornament, but as it was afterwards used by John Wolfe, whose numerous devices were all forms of the fleur-de-lis, it seems proper to include it. In the *Heroical Devices of C. Paradin*, 1591, p. 331, a similar fleur-de-lis with marigolds, crowned, is given as the impresa of Magaret of Navarre and Margaret of France. The block is different from that used on the title-page.

Perhaps passed to John Wolfe c. 1593, when Kearney went to Ireland.

*1597 by J. WOLFE. Lopes (D.). *A Report of the Kingdom of Congo* (second title, after prelims.).

259. (37.5 × 37.5 mm.) A two-tailed mermaid blowing two horns.

This is called a device by Mr. Sayle (pp. 805, 910, and 1018, but not at p. 1235), but seems rather to be an ornament. It is included here on account of the frequency with which it appears on title-pages and because of its liability to be confused with No. 248. It was probably metal, and there seem to have been at least two very similar blocks.

Probably representing the sign of Thomas Gubbin, bookseller, 1587-1629, who was trading at the Griffin in 1588 [Hazlitt, II. 194]. It was presumably taken from one of the griffin devices of Sébastien Gryphe or Gryphius, printer at Lyons 1529-1550. See Silvestre, 214, 869.

The device is distinguished from all similar ones by the initials (not very clear in the facsimile). Traces remain of a motto—almost certainly *In Domino Confido*—round the frame. It seems probable that it originally belonged to John Wolfe and dates from about 1593, when he was using another fleur-de-lis with this motto (No. 298).

In this block the curl on the left hand of the centre at the top of the frame comes close down on to the oval without a part of the inside of the curl being visible, as in all the other blocks. The fault at the outer edge of the bottom left-hand projection of the frame occurs in all prints seen. The blotch on the right-hand side of the bud seems only to occur in copies of the book from which the device was reproduced.

281. (39.5 × 34 mm.) Framed device representing Opportunity standing on a wheel which floats in the sea; with the motto, *Aut nunc aut nunquam*.

Occasio, whose principal characteristic was that the hair on her forehead was long, but that the back of her head was bald, so that she could be easily seized when approaching, but not at all when once past, was one of the very commonest emblems from classical times (among other references, see Ausonius, *Epig.*, 12). References to its occurrence in the emblem-books will be found in H. Green's *Shakespeare and the Emblem-writers*, pp. 259-65, and in his edition of Whitney (notes, pp. 238-9). As a device it was used by Nicholas Basse and

his heirs, printers at Frankfurt, in the second half of the sixteenth century; see Heitz, *Frankfurter Druckerzeichen*, plates lxvii-lxix. They did not, however, use the motto, 'Aut nunc aut nunquam,' nor do any of the forms of their device resemble Danter's closely in the details.

Passed to Leonard Lichfield in 1635.

1635 Oxford: excud. L. LICHFIELD. Montagu (R.). *Apparatus ad origines ecclesiasticas.*

1635 Oxford: by W. Turner. Field (R.). *Of the Church.*

William Turner was printer to the University at the same time as the Lichfields, father and son. He does not seem, however, to have worked in partnership with Leonard Lichfield, and it is not clear how he came to use this block.

286. (52 × 46 mm.) Device of a vase of flowers, with a hare, sheaf of rye, and the sun, also the arms of the Stationers' Company and two cornucopias.

The rebus of Harrison, cf. No. 143. I cannot interpret the two oval objects at the top of the design. Cf. No. 343.

287. (61 × 46 mm.) Framed device of an anchor suspended by a hand from the clouds with two cornucopias (?), in the ends of which are a skull and a child's head.

I cannot explain the meaning of the device, which was probably borrowed from some book of emblems.

288. (? c. 65 × 54 mm.) Device of an ox upon a bridge with *Labore et Constantia*.

Compare No. 289. The only print of this that I have been able to find is the incomplete one mentioned below.

*[?] [? for J. OXENBRIDGE.] ? ?

Fragment in the Bagford Collection, Harl. 5963, No. 400. From the printing on the back it appears to be taken from some religious treatise in English.

289. (45 × 39 mm.) Device of an ox on a bridge, with the letter N, and *Labore et Constantia*.

The rebus of John Oxenbridge, stationer 1589-1600. Cf. No. 288.

*1593 in aed. R. Field, imp. J. OXENBRIDGE. Kis (S.). Szegedinus. *Tabulae analyticae*.

Some copies have 'impensis G. Nortoni' and device No. 174.

290. (36 × 28 mm.) Device of a flower vase above which is the sun, and below, the arms of the City of London. Two empty ovals at sides.

A comparison of this device with No. 286 suggests that it may at one time have been Harrison's, and had a hare and sheaf of rye—or initials—in the ovals, but in all examples that I have seen they are empty.

Probably passed to Richard Bishop in 1634-8.

1640 by R. BISHOP for A. Croke. Jonson (B.). *Works, Part ii.*

293. (59.5 × 54 mm.) Mercury's hat and caduceus with two cornucopias and sea-scape.

The design is taken from an emblem signifying that those who possess intelligence and a ready tongue will be blessed with abundance (Alciat, ed. 1567, emblem 65, and in earlier editions; P. Giovio, *Dialogo dell' imprese militare*, ed. 1574, p. 155). The background of the sea, hills, etc., does not occur in such of the emblem-books as I have seen.

The device was considered by Herbert to be Arnold Hatfield's (p. 1211), but though he used it at least twice I see no reason to connect it especially with him. It may at first have been either G. Bishop's or R. Barker's, but by 1594 it seems to have got to the Eliot's Court printing house (see note on this). While there it was used by the partners indiscriminately.

*1592 by G. B[ishop], R. N[ewbery] and R. B[arker]. *Biblia Sacra* (before pts. *v and vi).

294. (60 × 48 mm.) Framed device of a fleur-de-lis with two cherubs and I. W.

Apparently modelled on a device of the Giunti of Florence (see *Il Decamerone*, Firenze, 1587), but it varies considerably in details from this, and there may be another Giunta device which it more closely resembles.

296. (19 × 49 mm.) Ornament having in the centre a tiger's head, with the motto *Auspicante Deo*.

It is not clear to whom this belonged, and it is doubtful whether it has any claim to be regarded as a device. Neither Peter Short nor Ponsonby seems to have been under the patronage of Walsingham, whose crest the tiger's head was. Cf. Nos. 212, 323.

299. (50 × 40.5 mm.) Framed device of Truth being scourged by a hand from the clouds. Between her feet the initials T. C. The motto *Viressit vulnere veritas.*

According to Corser's *Collectanea Anglo-Poetica*, vol. iii, p. 242-4, *The French History* of Anne Dowriche, printed by T. Orwin for T. Man, 1589, has on the title 'the printer's singular device, viz.: a figure of Truth crowned, standing naked, with a scourge at her back, and around it the motto, "Viressit vulnere Veritas."' The cut appears again on the last page, where it is inscribed 'Veritie purtraied by the French Pilgrime.' It would seem likely that Creede's device is copied from this, but I have been unable to see a copy of the book, and therefore cannot say if the resemblance is close.

*1605 for S. Waterson. [Sandys (Sir E.).] *A Relation of the state of Religion*.
Not in the edition of this date printed by Simmes.

318. (42 × 27 mm.) Device of a Pegasus above a caduceus and cornucopias upheld by hands emerging from clouds.

Cf. Nos. 316, 317, from which it may be distinguished by the horse's tail

not being bent outwards at end, and by differences in the clouds, especially that on the left side.

319. (48 × 40 mm.) Framed device of a hare, rye, and the sun, the rebus of Harrison, with a dove, and the motto, *Dum spero fero*. In the lower left-hand corner I. H.

Cf. Nos. 275, 143. Probably owned by John Harrison II.

320. (35.5 × 33 mm.) A gilly-flower with initials G. S.

[1592 for G. SIMSON and W. White. Cotton (R.). *A Direction to the Waters of Life* (T. C. C.).

The device, *without* G. S., is on the last page immediately above the colophon, which is dated 1592. The title-page is not dated. It is not quite certain that the block is the same. If it is, the date is perhaps reprinted from an earlier edition, as it seems somewhat unlikely that the initials would be inserted in *wood-cut* into the block after it had been in use for many years.]

(α) With G. S.

*1600 by G. SIMSON. Hylles (T.). *The Art of Vulgar Arithmetic*.

? Passed to Richard Read in 1601.

(β) Without initials.

1601 for E. Matts. Cornwallis (Sir W.). *A Second part of Essays*.

Passed to George Eld c. 1604.

1607 by G. ELD. S. (W.). *The Puritan*.

1608 for W. Barrett. Malelief (C.). *An Historical Discourse of a voyage in May 1605*.

Passed to Miles Fletcher or Flesher in 1624.

(γ) Border all cut away save piece below flower (33 × 27 mm.).

1639 typis M. F., sumptibus L. Fawne and S. Gellibrand. Comenius (J. A.). *Pan-sophiae Prodomus* (sig. A6 verso).

321. (49.5 × 65.5 mm.) Framed device of a kingfisher catching a fish, with the motto, *Motos soleo componere fluctus*, and below, *Alcione*.

The device puns on the name of the owner Thomas Fisher, bookseller 1600-1602. The kingfisher (Alcyon) is, of course, an emblem of fair weather, cf. Green, *Shakespeare and the Emblem-Writers*, pp. 390-2. The motto, apparently based on *Aen.* i. 135, perhaps comes from one of the emblem-books, but I have not traced it.

322. (56 × 46 mm.) A frame enclosing a shield with five fusils conjoined in fess, and in chief three mullets; the motto, *Deus in æternum*.

The arms are perhaps those of the author of the *Works of Armory*, 1597; see Burke's *General Armory*, under Bosville of Wormsworth, co. York. If so, however, it is not easy to see how the block came to be used in Holborne's *Pavans*. 1597 by H. Ballard. Bossewell (J.). *Works of Armory*.

*1599 by W. Barley, assign of T. Morley. Holborne (A.). *Pavans, Galliards, etc.*

323. (24 × 112.5 mm.) Ornament having in the centre the crest of Sir Francis Walsingham; out of a mural coronet a tiger's head ducally gorged.

Possibly belonging originally to Christopher Barker; cf. Nos. 212, 296.

*1595 by J. WINDET for A. Maunsell. Maunsell (A.). *Catalogue of English Books, Part I* (head of fol. 4 of prelims.).

Probably passed to William Stansby in 1611.

324. (127 × 126 mm.) Compartment emblematic of the history of Rome; at top, ROMA; at foot, the initials A. I., standing for Adam Islip.

Used to contain the device No. 309.

*1600 by A. ISLIP. Livius (T.). *The Roman History . . . trans. by P. Holland*.

325. (63.5 × 48 mm.) Oval device of a woman with the sun in one hand and in the other a cup, into which drops of liquid are falling from the clouds; with *Alma mater Cantabrigia* and the motto, *Hinc lucem et pocula sacra*.

A smaller form of No. 312, and presumably cut for Richard Smith, though I have not found it used by him. It was probably employed by William Wood in allusion to his sign of Time.

*1601 by V. S. for W. WOOD. Weever (J.). *Mirror of Martyrs*.

332. (111 × 10.5 mm.) A crowned rose.

It is doubtful whether this is to be regarded as a device or merely as an ornament. As, however, Valentine Simmes apparently possessed it in two sizes (see No. 333), it seemed better to include it. The only printer known to have used the Rose and Crown as a sign at this date was Richard Jones.

Presumably an emblem, but I have not met with it elsewhere in precisely this form.

[? 1603 A Plague-bill.]

A fragment in the Bagford Collection, Harl. 5919, No. 71: the total deaths are 35,254, whereof those who died of the plague were 29,301. This does not seem to correspond exactly with any figures given elsewhere, but is nearer to those of the 1603 plague than to those of any other. Windet entered the bills on 1 August 1603 (Arber, iii. 243).

341. (45 × 44.5 mm.) Device of a winged skull resting on a globe; above the skull an hour-glass and a book with the motto, *I liue to dy. I dy to liue*.

A close copy of an emblem of Johannes Sambucus (*Emblemata*, ed. 1566 p. 99). The motto is there *In morte vita*, and the meaning is that if a man gives up his life to the pursuit of knowledge his fame may fly all over the world when he himself is dead. The device seems to have no particular connection with William Leake, bookseller, 1592-1633, who at the time at which it is

found in books printed for him was trading at the sign of the Holy Ghost, and from its condition it seems probable that it is a good deal older than 1602, the earliest date at which I have found it.

[The device occurs also in the Bagford Collection, Harl. 5963, No. 310, with No. 290 on verso, but I have not been able to identify the book from which the fragment was taken. It seems likely to be one printed by E. Allde for J. Harrison, but is not Massinger's *Bondman*.

The initials are probably those of Thomas Purfoot, junior.

347. (31 × 87 mm.) Device or ornament of an open book upon which is laid a sword and a sceptre: the motto, *Doctrina parit virtutem*.

I cannot discover that this represents the arms of any person or society, though it seems probable that it does, nor is the ownership of the block at all clear. From 1607 to 1629, save for a single appearance at Eton in 1613, its use seems almost to have been confined to official publications by the King's Printers and law-books issued by the Stationers' Company. If the Eton imprint is authentic, the block must, presumably, at that time have been in the possession of M. Bradwood (cf. Nos. 293, 380), in which case we might suppose it to have formerly belonged to the Eliot's Court Press; but the earlier imprints seem rather to indicate that it was owned by the Barker, Bill, and Norton partnership.

348. (53 × 41 mm.) Device of an old man standing by an olive-tree, with the motto *Noli altum sapere* on a scroll entwined in the branches.

Copied from the device of Charles Estienne, printer at Paris, 1551-1561 (Silvestre, 959).

It is stated by T. B. Reed in his *Old English Letter Foundries*, p. 140, on the authority of the *Histoire de l'Imprimerie* of Paul Dupont, 1854, i. 488, that permission to use the Estienne device was granted to John Norton by Paul Estienne, while on a visit to England in 1594, as a mark of admiration for his printing. I have, however, been unable to trace the story back beyond Dupont, or to find an example of the use of the device in England earlier than 1605. This device was re-cut at least twice; see Nos. 349, 350.

351. (53 × 39 mm.) Device of an old man standing by an olive-tree, with the motto *Noli altum sapere* on a scroll entwined in the branches.

The device is probably one of those belonging to the Estienne family (see Silvestre, 1134; cf. 163, 958), and not English at all. I have, however, included it, as I have been unable definitely to identify the block with any of those used abroad.

352. (53 × 47 mm.) Device of two men, one planting and the other watering, under a sky in which is set the sacred name in Hebrew characters.

This is closely copied from a device of Thomas Courteau, printer at Geneva, 1557-1567 (Silvestre, 851; Heitz, *Genfer Buchdruckerzeichen*, No. 10). Courteau used it with the motto: 'Celuy qui plante n'est rien, ne celuy qui arrouse: mais Dieu qui donne accroissement. 1. Corinth. 3.' The ownership of the device is not clear. Mr. Sayle (p. 428) regards it as Hatfield's, but the evidence seems rather to connect it with Norton and Bill.

Save for the portcullis (the arms of the City of Westminster) at the top, and for the substitution of 'Prudentia' for the printer's name 'Vincenti,' the device seems to have been copied from that of Barthélemy Vincent, bookseller at Lyons, 1571-1626; see Silvestre, 1263. 356. (65 × 45 mm.) A garb, or wheatsheaf, on a wreath. Possibly the crest of the printer's patron, but it was used by several families, and I have been unable to identify the person intended.

Mr. Sayle (No. 7439) notes that the sermon by R. Wilkinson preached at

the marriage of Sir James Hay and Honora Denny in 1607 and published as *The Merchant Royal*, by F. Kingston for J. Flasket, has a smaller garb. This sermon has on the title a ship (63 × 86 mm.), and above it to left and right the garb referred to and a crest of a cubit arm holding five wheat ears. The latter is the crest of the Denny family, and perhaps the garb was that of Sir James Hay, but I have been unable to find evidence of this.

361. (41 × 36 mm.) A two-headed eagle.

This is evidently intended for the arms of William Barlow, Bishop of Lincoln, the author of the book in which it appears. The arms are described as 'Sable, an eagle displayed double-headed, holding a staff raguly barwise argent, beaked and membered and a fleurdeyls in chief or' (Bedford, *Blazon of Episcopacy*, p. 74). The fleur-de-lis should be between and above the heads.

It is very doubtful whether this is to be considered as a printer's device, for neither Haviland nor Law are known to have been otherwise connected with Barlow or under his patronage. It seemed, however, useful to include it, as an imitation of it was undoubtedly used as a device by another printer; see No. 362.

365. (17 × 18 mm.) Device or emblem of two heads joined at the back.

As used in 1610 it seems probable that this was meant to refer to the title of the book in which it appeared. As, however, it may have been suggested by the devices used by P. Brubach at Frankfurt, 1543-4 (Heitz, *Frankf. Druckerzeichen*, xxxi. 17, 18, 20), and as it was later used in other works, it seemed best to include it.

366. (71.5 × 53.5 mm.) Oval device of an anchor and snake upheld by two hands emerging from clouds.

The device was that of Jean Crespin, printer at Geneva, 1551-72; see Heitz, *Genfer Buchdruckerzeichen*, 43-53, and cf. the devices of Thomas Bassandine, Nos. 176, 178. Short may have adopted it on account of its being in some degree similar to his brazen serpent (No. 119). This design was afterwards closely copied in a device used by Griffin and Haviland, see No. 390.

375. (96 × 87 mm.) Device of the sun emerging from clouds, in a border with flowers in vases and two birds. The motto *Sic Augustinus dissipabit*.

The motto appears to be part of the block, which, therefore, was presumably cut for the work in which it is first met with. Later, this motto was removed, and the device is used either with other mottoes inserted in type, or with none. The inner part was then entirely separate from the frame, as is clear from the different position which it occupies in different books.

376. (61 × 48 mm.) Framed device of a bird bearing the word 'wick' in its bill, with *Non altum peto. I. S.*

The bird is presumably a smew, and a pun is intended on the name John Smethwick, the owner of the device. It may be noted, however, that the bird's name occurs in a great variety of forms, among others 'smee' and 'smeath,' so we can infer nothing as to the contemporary pronunciation of 'Smethwick.' The frame appears to be copied from that of No. 292. As the condition of the block had not noticeably deteriorated after twenty-five years of use, we may suppose it to have been a metal one.

Chalons, *History of France*, 1752, ii. 403); but is much older than this, and may have originally stood simply for Faith triumphing over Death. It was used by several French printers, see Silvestre, Nos. 607, 894, 956, and Heitz, *Genfer Buchdruckerzeichen*, 25, 70, 160. [?] 'Genevæ apud Jacobum Stoer.'

The device, apparently from the same block as that used by Stansby, occurs in a fragment with the above imprint in the Bagford Collection (Harl. 5963, No. 407). There is no indication of the book from which the fragment was taken, and I have been unable to identify it. As, however, the device is not known to have been used by Stoer, who printed at Geneva from c. 1580 to 1625, and as the type of the imprint appears to be the same as one possessed by Stansby, it seems not improbable that the imprint is false and that the book was printed in England.

396. (39 × 20 mm.) A crowned rose.

This is a cast ornament belonging to a set which included the crowned harp (No. 398), a crowned thistle, and a crowned fleur-de-lis. These are frequently used together, as in J. Longland's *Great Britain's Salomon*, J. Bill, 1625 (sig. A2), and Bacon's *Sylva Sylvarum*, J. H. for W. Lee, 1628 (prelims.), and then, of course, are merely ornaments. The rose, however, is fairly often used alone, and as it then may be taken for a device, it seems useful to give it. It is to be distinguished from the rose used at Oxford (No. 400).

 Presumably printed by Kingston.

398. (39.5 × 20 mm.) A crowned harp.

This is merely a cast ornament, belonging to the same set as the crowned rose (No. 396), which see. As used by the Dublin Stationers, however, it may be regarded more or less as a device, and it therefore seemed best to include it.

402. (73 × 60 mm.) Device of clasped hands, caduceus, and cornucopias, with *Sapientia Pacem. Pax Opulentiam*, and F. K.

The design is evidently modelled on the device of Thomas Orwin, which passed to Felix Kingston in 1597, see No. 273, and the motto is merely a Latinized form of Orwin's.

411. (36 × 45 mm.) Framed device of a hand emerging from a cloud, and holding a pair of compasses, with the motto, *Labore et Constantia*.

Copied from one of the Plantin devices, probably from that which appears in G. Whitney's *Choice of Emblems*, Leyden, in the house of Christopher Plantin, by Francis Raphelengius, 1586.

*1630 by T. P., imp. I. S. Ruggle (G.). *Ignoramus*.

Sayle (p. 1124) queries whether T. P. is T. Paine or T. Purfoot II. The I. S. is presumably J. Spencer, to whom the rights of *Ignoramus* were assigned on July 3, 1630, by the widow of W. Burre.

*** A close copy of this device, but certainly not the same block, was used in T. Whitfeld's *Discourse of Liberty of Conscience*, for J. Wright, 1649, and in books printed by Jane Bell in 1653 and 1658.

416. (32 × 25 mm.) Oval device of a woman with the sun in one hand and a cup in the other: *Alma Mater* and *Hinc lucem et pocula sacra*.

Cf. Nos. 325-7, 329. Mr. Sayle, on pp. 1269 and 1286, notes a device of this type measuring 33 mm., and on p. 1284 one measuring 31.5 mm., apparently considering that these differ. There is, indeed, an extraordinary variation in the size of prints of the device: I have found it of all heights from 31 to 33.5 mm., but after careful examination of a number of prints, I have failed to discover any evidence that there was more than one block. The differences in size, great as they are, might, I think, be accounted for by the use of different kinds of paper, and varying degrees of dampness at the time of the impression.

Though not found, so far as I can learn, before 1652, this block is evidently Elizabethan. It may originally not have been a printer's device, but some kind of stamp used for marking goods manufactured under a special licence, as, for example, music-paper or playing cards.

Mr. Sayle (p. 1290) compares J. Bebel's device at Basle (P. Heitz, *Basler Büchermarken*, pp. 72-3), but it has no marked resemblance with Daniel's, nor has it the same motto. Other Basle printers used a palm-tree, e.g., M. Isengrin in 1539-1567, and T. Guarin in 1564-1578 (see Heitz, *op. cit.*, pp. 84-7, 102-5). The device alludes to the notion that the palm-tree has an especial power of straightening itself when held down by weights.

APPENDIX OF UNTRACED DEVICES, MISDESCRIPTIONS, AND GHOSTS

1. The devices of Hugo Goes, printer at York, 1509.

Two devices of Goes are mentioned, one by Ames, who describes a broad-side '“Emprynted at Beverlay in the Hyegate, by me Hewe Goes,” with his mark or rebus of a great  and a goose' (Herbert, p. 1439), and another in a note of Bagford's (Harl. MS. 5974. 95), 'Donatus cum Remigio impressus Londoniis per me Hugonem Goes and Henery Watson, with the printer's device H.G.' (Duff, *Century*, p. 57). Neither of these books can be traced at present, and I am consequently unable to give the devices.

It is, however, probable that the device of Goes exists, though, we must suppose, hardly in the same form as in the productions mentioned above, in some wall-paper fragments found in May 1911 in the course of restoration at the Lodge of Christ's College, Cambridge (see Mr. Sayle's paper on *Cambridge Fragments*, with facsimile of the wall-paper pattern, in the *Library*, October 1911, pp. 339 ff., and his 'Postscript' in July 1912, pp. 336-339). On one side of the pattern is an , and on the other a bird which at least resembles a goose as much as anything else.

2. The supposed device of Thomas Godfray.

In the engraved plate of devices given by Ames (in Herbert, facing p. 238—but often elsewhere) is a plain monogram within a shield, under which is the name Thomas Godfray. The monogram appears however to consist of the letters F G, and occurs, not in a book, but on a panel binding in renaissance style with heads in medallions (Duff, *Century*, p. 56).

3. A forgery of one of John Day's devices.

In 1581 or 1582 Roger Ward printed a surreptitious edition of the *A B C and little Catechism*, which belonged to John Day. At the end of this was Day's mark, which Ward had had imitated by a Frenchman dwelling within the Blackfriars (Arber, ii. 760). I have not been able to find a copy of this pirated edition, and do not know which of Day's marks was copied. In one of the documents concerning the matter it is called Day's 'marke or Armes,' in another his 'marke or stampe' (Arber, ii. 762, 768). It seems not unlikely that it was a form of No. 200, which Day used at the end of certain books of a similar class.

4. The devices of John Hester.

Two devices having the monogram of John Hester within a frame are found in *A Brief Answer to Joseph Quercetanus* [i.e., J. Du Chesne] 'At London, Printed Anno. Dom. 1591.' The first of these, occurring on the general title-page, measures 50 × 42 mm.; the second, on a title-page to the second part of the book entitled *The True and Perfect Spagerike preparation of Minerals*, and also at the end of the same part, measures 64 × 50 mm. This has I. H. in the frame. The dedication of the book is signed by John Hester. There is no printer's name. At the end of the text of part two is a notice: 'These are to bee solde by Iohn Hester, dwelling at Poole's wharfe at the sign of the Stillitorie, 1591.' This evidently refers, not to the books, but to certain medicines which Hester has been describing. There is no evidence that he had anything to do with the book trade, and I have therefore not included his devices. The larger of these devices is reproduced in Mr. Roberts's *Printers' Marks*, p. 70, as that of Andrew Hester, bookseller, 1538-57.

5. A device of an angel with trumpet, etc.

In the Ames Collection, ii. 217, is a title-page of a 12mo *New Testament* in Latin (Beza's version, 1610), with the imprint 'Excudebat' J. Norton. On the title is a device (41 × 32 mm.) representing Fame with a trumpet and two serpents. About it, *Perpetuaque gloria comparatur virtute*: below, a monogram containing the letter S. The condition of the print is too bad to permit of reproduction, and I have been unable to find another copy of the book, or to trace the device elsewhere. From the general appearance of the page it seems not improbable that the book was printed abroad.

6. Device or emblem of a gnomon rising from the sea (74 × 77 mm.), with motto, *Sibi conscia recti*.

This occurs on the title-page of G. Chapman's *Ovid's Banquet of Sense*, by I. R. for R. Smith, 1595. It is probable that it is an emblem of the author's and has nothing to do with the printer or publisher.

7. Device of a horse's head in a lozenge (21 × 28 mm).

This is regarded by Mr. Sayle (p. 1147) as the device of John Raworth, printer 1638-1645. It seems, however, to occur in but few of his publications, and as his sign is unknown, its claim to be considered as a device is very questionable. In the prints known to me the block is so badly worn and broken that I think it can hardly have been originally cut for Raworth, and is more probably an old ornament. I have therefore not included it.

NOTES

NOTES ON THE TRANSFER OF DEVICES FROM ONE PRINTING-HOUSE TO ANOTHER

THE purpose of the notes which follow is twofold. In the first place they are intended to explain and, so far as is possible, to justify the statements made in the preceding part of the book as to the transference of devices and compartments from one printer to another. In the second place they are intended to bring together in a convenient form all the information as to the relation between the various printing and publishing houses which is to be derived from the study of these transferences.

It should be clearly understood that many of the statements made in these notes, especially as to the *dates* of transfer, are conjectural. Only rarely do we get precise information on the subject from external sources, and even when we seem to do so, as in the notes of Sir John Lambe printed in vol. iii of Arber's *Transcript*, it often proves misleading. Certainty can only be arrived at by tracing the type, ornaments, and initial letters from one printer to another, and to do this for the whole of the English printing trade from its beginnings up to 1640 would be the work of years. In the meantime it is often useful to know that *some* of such and such a printer's material passed or is *likely* to have passed to such and such another, and I have therefore not been sparing in suggesting possible connections between the various printing-houses, even when the evidence of the devices is very far short of proof.

It is sometimes convenient to be able to trace material backwards as well as forwards. I have therefore added an alphabetical list of the transfers in the reverse order. It seemed less confusing to give this list separately than to insert it among the notes in the form of cross references.

ALLDE (E.) to ALLDE (ELIZ.). 1628

Edward Allde, printer 1584-1628, apparently died in the latter year. His business was carried on by his widow, Elizabeth, until about 1635-6. She used his device No. 310 in 1632 and No. 290 in 1633.

from business in 1635-6. She was succeeded by her son-in-law (*Dictionary I*, p. 6) or son (*Dictionary II*, p. 142; Arber, iii. 704), Richard Oulton, to whom in 1640 she transferred all her copyrights. In 1637 he used her device No. 290, formerly Edward Allde's.

ALLDE (ELIZ.) to OULTON (R.). 1635-6

Elizabeth Allde seems to have retired

ANDERSON (G.) to BRYSON (R.). 1638

George Anderson, who had begun print-

ing in Edinburgh in 1637 and had then bought from Robert Young certain material formerly Finlason's, removed from Edinburgh to Glasgow in 1638. Before leaving he appears to have sold part of his material to Robert Bryson, whom we find using Finlason's ornament No. 358 in 1640. The rest of his material seems eventually to have passed to Andrew Anderson (cf. No. 187).

ARBUTHNET (A.) to FINLASON (T.).

1585-1604

Alexander Arbuthnet died in 1585. One of his devices, No. 225, was used by Thomas Finlason in 1604. Nothing is known of how it came into his hands, but it is possible that he obtained it from Waldegrave, whose material he bought in or about that year.

BADGER (R.) to BADGER (T.). ? 1642

Richard Badger seems not to be heard of after 1642. A Thomas Badger who printed from 1639 to 1646 was his son, and may have inherited his devices, etc. Richard Badger's device No. 417 was used in 1644, but I have not discovered by whom. As it included the Badger arms it seems more likely to have been used by his son than by a stranger.

BADGER (R.) to MILLER (G.).

See Field (R.) to Miller (G.) and Badger (R.).

BALDWIN (W.) to CHARLEWOOD (J.).

1549-88

William Baldwin was for some time an assistant to Edward Whitchurch, but seems only to have printed a single work on his own account, *The Canticles of Solomon*, 1549. The device used in this (No. 112) eventu-

ally came into the hands of John Charlewood, and is found in books printed by him in 1588 and later, but nothing is known of any connection between the two men, nor is the device known to occur during the intervening thirty-eight years.

BARKER (C.) to DEPUTIES, to BARKER (R.)

1588, 1599

In 1588 Christopher Barker nominated as his deputies George Bishop and Ralph Newbery, and after this date we find most of Barker's compartments and ornaments in books stated to have been printed by these men, either in their own names (as No. 185) or as Barker's deputies (as Nos. 221, 204, 248, 220, 300). In 1589, or soon after, he took his son Robert into partnership at the royal printing-house, and in 1596 and later we find Robert printing with his father's deputies (No. 300). In 1599 Christopher Barker died and Robert succeeded him. The above-mentioned compartments and ornaments came into his hands, and also No. 193, which I have not found in use by the Deputies (cf. also No. 212).

BARKER (C.) to BISHOP (G.) and NEWBERY (R.). See Barker (C.) to Barker (R.).

BARKER (R.) to BILL (J.), and NORTON (B.).

c. 1617

Robert Barker succeeded his father, Christopher, at the royal printing house in 1599. About 1611 Bonham Norton and John Bill acquired an interest in the business; but their names do not appear on books issued from the printing-house until 1616, when we find Bill's name in conjunction with Barker's compartment and device, Nos. 221, 300. From 1617 to May 1619, and from 1621 to 1629, Barker's

name disappears from the imprints, which bear the names of Bill or Norton, or both. For an account of the quarrel which occasioned these changes, and a list of the various imprints, see *Dictionary I*, p. 32. The devices, etc., properly belonging to Barker which appear in the possession of Bill and Norton are Nos. 193, 204, 220, 221, 248, 300. I have not attempted to give examples of their occurrence in conjunction with all the varieties of imprint between 1616 and 1629.

BARLEY (W.) [? to JONES (W.)] to MATHEWES (A.). 1614-33

William Barley died in 1613-14, and in the latter year his widow assigned all her rights to John Beale. It is not known what became of his printing material, but his device No. 304 is found in 1633 in the possession of Augustine Mathewes. In 1632 it had been used by 'W. J.,' who may perhaps have been William Jones, the printer, of Redcross Street.

BARNES (J.) to LICHFIELD (J.). 1617

Joseph Barnes was printer to the University of Oxford from 1584 to the beginning of 1617, when he retired from business. John Lichfield was appointed to succeed him in Feb. 1617, together with William Wrench. Wrench soon left the partnership, his place being taken by James Short, who was associated with Lichfield from 1618 to 1624. Barnes's device No. 336 was used by Lichfield in 1617, and his No. 285 in 1622.

BLOWER (R.) to JONES (W.). ? 1617

Ralph Blower printed from 1595 until at least 1615, and entered a book in the Registers as late as March 1617/18. It is

possible, however, that before this last date his business had been taken over by William Jones of Redcross Street, who in 1617 used a device, No. 298, which had passed through Blower's hands. In 1626 Blower's copyrights were transferred by his widow to Jones.

BLOWER (R.) to MATHEWES (A.).

? 1615-22

Ralph Blower's business seems to have passed about 1617 or earlier to William Jones of Redcross Street; but one device apparently used by him, No. 249, is found in the hands of Augustine Mathewes in 1622.

BRADOCK (R.) [to HAVILAND (T.) and HALL (W.)] to BEALE (J.). 1609-14

Richard Bradock continued to print until 1609, when the business was bought by Thomas Haviland and William Hall. They sold it about 1614 to John Beale, who for a time took in as partner Thomas Brudenell. (Arber, iii. 544; *Dictionary II*, p. 17.) Bradock seems to have been still alive in 1615, but there is no evidence that he was in business. Compartment No. 346 passes from Bradock to Beale in 1604-19.

BRADOCK (R.) to LEGATE (J.) II.

1609-35

The last heard of Richard Bradock is in July 1615. A device, No. 202, used in 1607 by an R. B. who is presumably Bradock, was used in 1635 by John Legate II. It is not clear how it came into his hands.

BRADWOOD (M.) to GRIFFIN (E.). 1615-16

Melchisedec Bradwood, who in 1602 had succeeded to the place of Bollifant in the Eliot's Court Printing House (*q.v.*), went

down to Eton c. 1609 to manage a press established there by John Norton. He seems to have kept on his London business until at least 1613, and Mr. Sayle attributes to him a book printed in 1622. According, however, to Mr. Plomer (*Dictionary I*, p. 48) he died in 1618 at Eton. He printed at Eton 1610-15, and it seems probable that in the latter year, or early in 1616, his materials were returned to London and handed over to Edward Griffin, who had succeeded—or then succeeded—to his business there. We find Griffin using in 1616 in London two devices, Nos. 293 and 380, which had been used by Bradwood at Eton in 1613 and 1615. See also under Eliot's Court Press.

BUCK (J. and T.) to DANIEL (R.). 1640

John and Thomas Buck, who were appointed printers to the University of Cambridge in 1625, were joined by Roger Daniel in 1632. After 1635 John Buck's name disappears from the imprints and from 1640 to 1650 that of Thomas Buck also. During these ten years the business seems to have been managed by Daniel alone, though the Bucks retained an interest in it until 1668-70. The Bucks' devices, Nos. 264, 327, were used by Daniel alone in 1640.

BYDDELL (J.) to POWELL (W.).

See Whitchurch (E.) to Powell (W.).

BYDDELL (J.) to WHITCHURCH (E.). 1545

John Byddell appears to have died in 1545, his partner, or at least joint-occupier of Wynkyn de Worde's house, The Sun in Fleet Street, James Gaver, dying in the same year. After their death the house and business came into the hands of Edward

Whitchurch, who probably took over such of Wynkyn de Worde's devices as still remained. He used in 1545 part of one of these (No. 25).

BYNNEMAN (H.) to DENHAM (H.). 1583

Towards the end of Henry Bynneman's life he worked in partnership with Henry Denham, and to a certain extent with Ralph Newbery. We find one of his devices in Newbery's hands in 1581, No. 203. On Bynneman's death in 1583 all his other devices and compartments seem to have passed to Denham, whom, with Newbery, he had appointed his executor. His business was taken over by the Eliot's Court printers, but they seem never to have had any of his devices. Denham used one of his compartments, No. 230, in 1584, and another, No. 168, in 1585. Device No. 118, afterwards used by Yardley and Short, and No. 149, used by Henry Lownes, probably also passed through Denham's hands.

CALY (R.) to TOTTELL (R.).

See Grafton (R.) to Caly (R.).

CAXTON (W.) to DE WORDE (W.). 1491

William Caxton died in 1491, probably towards the end of the year. The only device which he is known to have used (No. 1) passed, with the rest of his printing material, to Wynkyn de Worde. As device No. 2 is used in books which probably appeared within a short time of Caxton's death, it is possible that this also was cut for him, though it has not been found in any work certainly printed in his lifetime.

CHARLEWOOD (J.) to JONES (R.). 1586-91

The relations between these printers present some difficulty. John Charlewood, who worked from 1578 to 1586 at the Half-Eagle and Key in Barbican, continued to print until his death in 1593; but, so far as I can discover, he does not mention the sign in his imprints after 1586, nor does Roberts, who succeeded to the business soon after Charlewood's death. In 1587 Charlewood is believed to have had a press in the Charterhouse (Marprelate, *Epistle*, ed. Arber, p. 23), but whether this was in addition to his older establishment is not clear. It is therefore possible that he ceased to use the sign in 1586 or leased the house to some one else. Be this as it may, in 1591 and 1594 we find his Half-Eagle and Key device, No. 136, used by Richard Jones, whose sign it certainly was not. Why or how the device came into his hands is a mystery. It has been suggested by Mr. Pollard (*Shakespeare Folios and Quartos*, p. 106) that the books in question may have been printed by Charlewood and Jones in partnership, as they had printed others. This is quite possible, but it must be remembered that the block would not be particularly distinctive of Charlewood, especially if he had ceased to use the sign, and would hardly by itself indicate his share in the book.

CHARLEWOOD (J.) to ROBERTS (J.). 1593

John Charlewood died in 1593 and his widow Alice in the same year married James Roberts, who had been printing since 1569. Charlewood's material probably all passed to Roberts, who is found using his device No. 112, which had been originally Baldwin's, in 1595. A large number of Charlewood's copyrights were transferred to Roberts on May 31, 1594.

CHARTERIS (H.) to CHARTERIS (R.). 1599

Henry Charteris, printer at Edinburgh, died in August 1599 and his business passed to his son Robert who used his device No. 307 in 1606.

CHARTERIS (R.) to HART (A.) and HIS HEIRS. ? 1610, 1621

Robert Charteris, printer at Edinburgh, seems to have got into difficulties of some sort and to have fled from Scotland in or soon after 1610. Andro Hart, who had previously been a bookseller, began to print in that year and took over some of Charteris' printing material. His heirs used Charteris' device No. 307 in 1633.

COLWELL (T.) to JACKSON (H.). 1575-6

Thomas Colwell died in or about 1575, and was succeeded, at the sign of St. John the Evangelist in Fleet Street, by Hugh Jackson, who married Colwell's widow. Colwell's device No. 68 was used by him in 1578.

COPLAND (R.) to COPLAND (W.). c. 1548

Robert Copland died c. 1548 and was succeeded, at the Rose Garland in Fleet Street, by his son (?) William, who used one of his devices, No. 71, in a book printed about 1557.

COTES (T.) to COTES (R.). 1641

Thomas and Richard Cotes, who were brothers, worked in partnership under the style of Robert Cotes from about 1627 to 1641, when Thomas died and Richard succeeded alone to the business. He used device No. 283 in 1643.

CREEDE (T.) to ALSOP (B.). 1617

Thomas Creede took Bernard Alsop into partnership in 1616, and in the following

year on Creede's death or retirement from the business, Alsop succeeded to it. He used Creede's device No. 314 in 1623 and No. 339 in 1627. His principal device, No. 299, is apparently not found after his death.

DANTER (J.) to JONES (R.).

See Danter (J.) to Stafford (S.).

DANTER (J.) to STAFFORD (S.). 1598-9

John Danter died in 1598 or 1599. He seems to have been succeeded by Simon Stafford, who was admitted a freeman of the Stationers' Company in May 1599, but had engaged in more or less illicit printing for two years previously. Stafford used Danter's device No. 281 in 1599. It may be noted that No. 295 was used by Danter until 1594 and by Stafford in 1609. It appears in a book believed to have been printed by R. Jones in 1597, but there is a good deal of doubt. If it had not been for this book, it would have been natural to suppose that No. 295 also passed direct to Stafford.

DAWSON (J.) I to DAWSON (MARY), to
DAWSON (J.) II. c. 1634, 1637.

John Dawson the elder is last heard of in 1634, and probably died in the course of that year. His widow Mary carried on the business for a time, her name appearing in imprints from 1635 to 1637. In the latter year she seems to have married again and transferred the business to her son, John Dawson II. See No. 414.

DAY (J.) to DAY (R.).

See Day (J.) to Windet (J.).

DAY (J.) to WALDEGRAVE (R.). c. 1584

John Day died in 1584. His materials

seem not to have passed to his son Richard who, at the time of his father's death, was on bad terms with his step-mother, and was refused any portion of his father's goods; and they were perhaps dispersed. We find one device used by him, No. 83, in the possession of Robert Waldegrave in 1586.

DAY (J.) to WAYLAND (J.). ? 1553

On the accession of Mary, John Day, who was throughout his life a strong anti-Romanist, appears to have fled from London. In October 1554 he was, however, captured in Norfolk and sent to the Tower (*Century*, p. 38). It appears from Foxe's *Acts and Monuments* (ed. Townsend, vi. 610) that he was afterwards imprisoned in Newgate for religion, but it is not known how long he remained there. In any case there seems to be no evidence that he resumed printing before 1557. A compartment of his, No. 116, was used in two undated books stated to be printed by John Wayland. These cannot be later than 1557, as Wayland seems to have died or gone out of business in that year. An ornament with the initials I. D., No. 115, appears in a *Sarum Missal* dated 1557, without printer's name. It seems a most unlikely book for Day to have printed, and as Wayland had a patent for service books it is possible that he printed this also. Both Nos. 115 and 116 were later again in the possession of Day.

DAY (J.) to WINDET (J.). c. 1584

As stated above (Day to Waldegrave) on John Day's death, in 1584, his printing materials may have been dispersed; at any rate they did not immediately pass

to his son Richard. One of his devices, No. 208, was used in 1588 by John Windet, who also used his compartment No. 116 in 1595. It is, however, to be remarked that most (but not all) of the books in which Windet used this device and compartment were printed for the assigns of Richard Day. They may, therefore, perhaps have been his property, and only lent to Windet; but one at least passed to Windet's successor.

DENHAM (H.) to JAGGARD (W.).

1585-1624

A sill-piece of a border, No. 86, originally Petit's, seems to have been used by Henry Denham in 1585, and another part of the same border is used by William Jaggard in 1624. I have been unable to trace the connection.

DENHAM (H.) to YARDLEY (R.) and
SHORT (P.).

1589-90

Henry Denham is last heard of in 1589, and in this year or the following his devices and compartments, including some formerly Bynneman's, passed to Richard Yardley and Peter Short, who were at the time in partnership. They used Denham's device No. 214 in 1590, his compartment No. 148 in 1593, and a device, formerly Bynneman's, No. 118, in the same year. Yardley now disappeared from the partnership, and the devices and compartment continued to be used by Short alone. In 1594 he used Denham's device No. 211, and his compartment No. 255, and again Bynneman's No. 118. He later used Bynneman's device No. 119 and his compartment No. 230. Devices Nos. 149, 150, and compartment No. 231 also probably passed through the hands of Yardley and Short, but are not known to have been

used by them. After Short's death in 1603 his materials passed to Henry Lownes.

DENHAM (H.) to YETSWEIRT (C.). ? 1594

In 1594 Charles Yetswiert, clerk of the Signet, was granted a patent for law books. He died in 1595, and his widow, Jane, held the patent until 1597. In 1599 it was granted to Thomas Wight and Bonham Norton for thirty years. Several books issued by C. Yetswiert are distinctly stated to have been printed by him, but it seems very doubtful whether he was ever a printer. Denham's compartment No. 168 appears in law books issued by the Yetswieris in 1594-6, and later in those by Wight and Norton.

EAST (T.) to SNODHAM (T.). 1609

Thomas East, printer, 1567-1609, probably died shortly before June 17 of the latter year, when Mistress East transferred his copyrights to Thomas Snodham, formerly his apprentice. East's printing materials probably passed to Snodham at the same time, for in 1609 we find him using device No. 83, which seems likely to have passed through East's hands, and in 1613 another, No. 227, which had been used by East in 1606.

ELD (G.) to FLETCHER or FLESHER (M.).

1624

Miles Fletcher or Flesher was in partnership with George Eld from 1617 until Eld's death of the plague in 1624, when Fletcher succeeded to his business. He used Eld's devices, Nos. 308, 320, and 375.

ELIOT'S COURT PRESS.

The use of devices by the printers

forming the Eliot's Court Press group is somewhat puzzling, and suggests that our information on the subject of this press is still incomplete. So far as I have been able to make out, its history is somewhat as follows: In 1584 Arnold Hatfield and Ninian Newton were printing in partnership at an address which does not seem to be known. In 1585 John Jackson and Edmund Bollifant were printing in partnership, probably at Eliot's Court, Little Old Bailey, which was Bollifant's address at this date (Hazlitt, I. 4). In or before 1586 all four men were in partnership (Herbert, p. 1218). After this date, save for one book printed by Hatfield and Newton jointly in 1587, the imprints generally (? always) bear the name of Hatfield, Bollifant, or Jackson alone. Newton seems to have printed nothing more, and is not heard of after 1587. Jackson was still one of the group in October 1593, when a book was entered to him and his partners, and he continued to print until 1596, after which date he disappears. In 1602 Edmund Bollifant died, and his place was taken by Melchisedec Bradwood, the firm now consisting only of Hatfield and Bradwood. Bradwood presumably worked at Eliot's Court until he went down to Eton c. 1609 (see Bradwood to Griffin), but he seldom or never gives an address in his imprints. Hatfield is thought to have died in 1612, and it is possible that his place was at once taken by Edward Griffin, to whom the business eventually passed. Bradwood remained at Eton, where he died in 1618, but he apparently sent his printing materials to London in 1615 (Bradwood to Griffin). The devices belonging to the partners were perhaps used by them indifferently. We find one, No. 239, used by Bollifant and

Jackson; another, No. 306, used by Bollifant and Hatfield, later passing to Haviland, probably by way of Edward Griffin; a third, No. 293, by Jackson, Bollifant, Hatfield, and at Eton, later passing to Griffin; a fourth, No. 354, by Hatfield and Bradwood, also passing eventually to Griffin.

ENGLAND (N.) to BYNNEMAN (H.).

1568-9

Nicholas England published from 1558 to 1568, but was never a printer. Device No. 138 is supposed to have been his, but it occurs in at least one book printed during his lifetime in which his name does not appear. Towards the end of his career it is found in a book printed for him by H. Bynneman, who seems to have retained it after his death.

FIELD (R.) to MILLER (G.) and BADGER (R.).

1624

Richard Field died in the autumn of 1624, and his business passed into the hands of one of his apprentices, George Miller, who at the time was in partnership with Richard Badger. All the devices which Field had inherited from Vautrollier seem to have passed to them. Nos. 164, 170, 179, 192, 222, 233, 246, and perhaps 210, were used by Miller, and a re-cutting of one of them, No. 195, was used by Badger. About 1630 the partnership was dissolved, when all these devices (including No. 195) passed to Miller alone, except No. 222, which was used by Badger in 1631-5, and No. 210, which does not seem to occur after 1625.

FINLASON (T.) to YOUNG (R.).

1630-2

Thomas Finlason, printer in Edinburgh, died in 1628, and his heirs printed for two

years. His materials, or part of them, passed to Robert Young, who was appointed King's Printer in Scotland in 1632. He used Finlason's ornament No. 363 in 1633. Nos. 187, 189, and 358 probably also passed through Young's hands.

GIBSON (T.) to DAY (J.). 1539-69

Thomas Gibson ceased to print in 1539, and his device, No. 83, eventually came into the possession of John Day, who used it from 1569, but it seems impossible to trace the course by which it came into his hands.

GIBSON (T.) [? to REYNES (J.)] to SMITH (H.). 1539-46

Thomas Gibson appears only to have printed in the years 1535-9. A border used by him, No. 62, is found in the *Works of Chaucer*, 1542, which is stated to be printed by John Reynes. As, however, Reynes is only known to have been a stationer, it is probable that the book was printed for him, though the occurrence of his initials in some of the ornamental letters shows that he had an important share in its production. Reynes died in 1544, and the border is next found in the possession of Henry Smith (1546).

GRAFTON (R.) to CALY (R.) to TOTTELL (R.). 1553, 1554

In 1553, on the accession of Queen Mary, Richard Grafton was deprived of his office of Royal Printer and excluded from the general pardon. It seems probable that he was at the same time dispossessed of his house, for we find Robert Caly, a printer of Catholic books, printing in 1553 at Grafton's address. In that year

Caly made use of Grafton's compartment, No. 105, and in 1556 probably of his compartment, No. 92. In or before 1555, however, No. 105 seems to have been transferred to Tottell, Grafton's son-in-law, who also apparently used his compartment No. 91 in 1554. It therefore seems likely that in 1553 Caly had been put in possession of all Grafton's printing materials and that he shortly afterwards disposed of part of it to Tottell. Later Tottell had Grafton's King in Council compartment, No. 110, and perhaps his device No. 104.

GRAFTON (R.) to WAYLAND (J.). ? 1553

As stated above (Grafton to Caly and Tottell), Grafton seems to have been dispossessed of his house in 1553. One of his compartments, that of the King in Council, No. 110, seems somehow to have come into the hands of John Wayland, who had succeeded Whitchurch at the Sun, and who used this compartment in 1557. The compartment is, however, important enough to have been lent by one printer to another, and it is quite possible that it was really Tottell's at this date, as it certainly was later.

GRIFFIN (A.) to GRIFFIN (E.) II. c. 1638

Anne Griffin, widow of Edward Griffin I, after carrying on business by herself (see Haviland to Griffin) for about two years, made it over to her son Edward Griffin junior in 1637 or 1638. Devices Nos. 306 and 392 passed from Anne Griffin to him in 1637-8.

GRIFFIN (E.) I to HAVILAND (J.). 1621

Edward Griffin died before June 1621. His business at Eliot's Court was carried

on by John Haviland, Griffin's widow being a partner. Haviland used Griffin's devices Nos. 293, 306, 390, and 392.

GUBBIN or GUBBINS (T.) to ALLDE (E.).
? 1600

Thomas Gubbins traded in London as a bookseller from 1587 to 1629. In the year 1603, however, he was admitted a freeman of York, and in the same year a device which seems to have represented one of his signs, No. 284, is found in the hands of Edward Allde, who had probably used it also in 1600 and 1602. Gubbins published a number of books up to 1598, but after that there is a gap of some sixteen years. We may therefore conjecture that in 1599 or 1600 he sold his business to Allde and went to York. He was back in London in 1614 and apparently continued to carry on business until his death in 1629, but published very little.

HALL (R.) to HOWE (W.). 1563-70

Rowland Hall died in September 1563. One of his devices, No. 142, is found in use by William Howe in 1570-1. It is possible that it passed through the hands of Richard Serle, who had his device No. 136 in or about 1565, but there is no evidence on the point.

HALL (R.) to SERLE (R.). 1563-5

On Rowland Hall's death in September 1563 his sign and business seem to have been taken over by Richard Serle. Serle, however, dwelt in Fleet Lane, not in Gutter Lane as Hall had done. He used Hall's device No. 136.

HARRISON (J.), senior and junior.

There is so much difficulty in distin-

guishing the various John Harrisons that I have not attempted to note the transfers of devices from one to another.

HARRISON (J.) III to OKES (N.).

See Harrison to Snowdon and Snowdon to Okes.

HARRISON (J.) III to SNOWDON (G.).

1604-6

John Harrison III is said to have succeeded to Thomas Judson's printing business in 1600. He was dead by February 1604, and in 1606 the business had apparently been taken over by George and Lionel Snowdon. Device No. 316 (? Harrison's) was used by George Snowdon in 1606. No. 334, which is found in 1607 in the possession of Nicholas Okes, probably also passed through the hands of the Snowdons.

HART (A.) to HIS HEIRS. 1621

Andro Hart died in 1621, and his printing materials passed to his heirs. They used his device No. 377 in 1622. Cf. No. 307.

HAVILAND (J.) to GRIFFIN (A.). ? 1634-6

John Haviland took over Edward Griffin's business in 1621, apparently in partnership with his widow Anne. From 1634 her name is found in imprints, and about 1636 Haviland seems to have retired from the partnership and Anne Griffin to have taken over the whole business. Device No. 306 passed from Haviland to Anne Griffin in 1635-7, while No. 392 appears to have been in her hands by 1634. No. 409 passed to her by 1636.

HAVILAND (J.) to GRIFFIN (E.) II.

See above and Griffin (A.) to Griffin (E.)

II. Nos. 420 and 422 seem to have passed direct to Edward Griffin II in 1639.

HEARNE (R.) to ISLIP (S.). 1646.

Richard Hearne to whom Adam Islip had left his printing materials in 1639, died or retired from business about 1646, and was succeeded by Adam Islip's widow, Susan. Device No. 263, used by her in 1647, probably had passed through his hands.

HERTFORD (J.) to BOURMAN (N.). 1639

John Hertford, printer at St. Albans 1534-9, got into trouble concerning the printing of 'a little book of detestable heresies' in 1539, and was sent to London with (?in charge of) Henry Pepwell and another stationer. The name of the last abbot of St. Albans was Richard Stevenage or Boreman, and his initials R. S. appear in Hertford's device, No. 84. This device is found in the same year 1539 in the hands of Nicholas Bourman in London. As Mr. Duff has suggested (*Provincial Printers*, p. 103), it is quite likely that this Nicholas was a relative of the abbot's, to whom the printing material had been entrusted during Hertford's absence, and by whom it was brought to London on the suppression of the monastery in December 1539.

HOWE (W.) to SIMMES (V.). ? 1596

William Howe, who was admitted a freeman of the Stationers' Company in 1556, continued to print until about 1596 (Hazlitt, II. 141). A device used by him in 1570-1, No. 142, is found in 1597 in possession of Valentine Simmes, who had then been printing for about three years. The precise date of change of ownership is not known.

ISLIP (A.) to HEARNE (R.). 1639

Adam Islip died in 1639, leaving all his presses and printing material to Richard Hearne, who is found using his device or ornament No. 251 in 1640. No. 263, used by Susan Islip in 1647, probably also passed through his hands.

JACOBI (H.) to PEPWELL (H.). c. 1518

Henry Jacobi, stationer, traded in London at the sign of the Trinity from 1506 to 1512, when he moved to Oxford and opened a shop there with the same sign. He died at Oxford in 1514, administration of his estate being granted to Joyce Pelgrim, who had been his partner. In 1518 Henry Pepwell began to print at the London house which had formerly been Jacobi's, and by 1519 the device used at Oxford by Jacobi in 1513, No. 34, had come into his hands. The exact relation of the two men is not clear. It is complicated by the fact that the real owner of the Jacobi-Pelgrim business in London may have been the wealthy merchant William Bretton, who financed several of their publications in 1506 and 1510, and had also an interest in the Oxford business (*Century*, p. 118).

JAGGARD (W.) [to JAGGARD (I.)] to COTES (T. and R.). 1623-7

William Jaggard died in 1623 and his business passed to his son Isaac, who only survived him for some three years. Soon after Isaac's death in February or March 1627, his widow transferred the business to Thomas and Richard Cotes, who used William Jaggard's devices Nos. 136 and 283; and also No. 112, which had probably passed through his hands, but is not known to have been used by him.

JEFFES (A.) [? to WHITE (W.) to WHITE (J.)] to MATHEWES (A).

? 1599-1622

Abel Jeffes printed little after 1595, and in 1599 made over certain copyrights to William White. He perhaps transferred his printing materials at the same time, for one of his devices, No. 238, originally Ward's, is found later in the hands of Augustine Mathewes, who used another device obtained from W. White, No. 188.

JONES (R.) to JAGGARD (W.). 1595-1615

There seems to be no trace of any direct connection between Richard Jones and William Jaggard, but a connection is of course possible through Roberts. Jaggard is found in 1615 using Jones's *Heb Ddieu heb ddim* device, No. 283, which Jones had used in 1592-5. It is found in 1606 in a book which bears also device No. 294, the ownership of which at the time is obscure (see Wolfe to Roberts).

JONES (R.) to ROBERTS (J.). 1594-9

A single device, No. 136, seems to have passed from Richard Jones to James Roberts. It had, however, formerly been the property of Charlewood, to whose business Roberts succeeded in 1593, and its use by Jones may have been a temporary arrangement (see Charlewood to Jones). Jones apparently continued to print until 1602, though it has been stated that he sold his business in 1597 or 1598 (*Dictionary I*, pp. 159, 289).

JONES (W.) to MATHEWES (A.).

See Barley (W.) to Mathewes (A.).

JUGGE (R.) to JUGGE (JOAN) to WATKINS (R.).

1577, 1579

Richard Jugge died in 1577, his business being carried on until at least 1579 by his widow Joan in partnership with his son John (see No. 123). She died in 1588, but long before this date most of her husband's printing material seems to have been dispersed. Two of Jugge's borders, Nos. 181 and 182, passed to Richard Watkins, his son-in-law, by whom they were used in 1579 and 1594 respectively. It is possible that No. 165, which is found in the hands of William White in 1599, also passed through Watkins's hands (see Watkins to White).

JUGGE (R.) to JUGGE (JOAN) to MAUNSELL (A.).

1577, ? 1588

The central part of Richard Jugge's larger pelican device, No. 125, appears to have passed to Andrew Maunsell by 1588, the year of Joan Jugge's death. I have found no other indication of a connection between the two men.

JUGGE (R.) to WHITE (W.).

See Jugge (R.) to Jugge (Joan) to Watkins (R.).

KEARNEY (W.) to FRANCKTON (J.).

1597-1600

William Kearney, who went to Dublin c. 1593 and printed there until 1597, was succeeded in 1600 by John Franckton, who had perhaps been his pupil. An ornament, No. 218, used by Kearney in England in 1591-2 was used at Dublin by Franckton in 1602.

KEARNEY (W.) to WOLFE (J.). c. 1593

Device No. 258 apparently passed from William Kearney to John Wolfe c. 1593;

or possibly, as it represented a fleur-de-lis, Wolfe's usual device, the book in which it appeared in 1591 may have been undertaken by Kearney in partnership with Wolfe.

KING (J.) to DENHAM (H.). 1560-85

We find the sill-piece of compartment No. 86, originally Petit's, which had been in the hands of John King in 1560, apparently in those of Henry Denham in 1585. No other connection seems to be traceable between the two men. We should rather have expected the compartment to pass to Marshe.

KING (J.) to MARSHE (T.). 1560-6

John King printed from 1555 to 1561, when he is supposed to have died. He may possibly have been for a time in partnership with Thomas Marshe, for *Certain Books by Master Skelton* was printed by them in Creed Lane. As this work is, however, not dated it is impossible to say whether this association had anything to do with the appearance in Marshe's hands of King's compartment No. 111 in 1566. It may be remarked that Marshe in 1561-2 had licence to print the *Chronicle* in octavo which he had bought of John King's wife (Arber, i. 178).

LEGATE (J.) I to LEGATE (J.) II. 1620

John Legate the elder appears to have removed from Cambridge to London in 1610. The date is sometimes given as 1609 but an edition of Thomas's *Dictionarium* has the imprint 'Cantabrigiae Ex officina Iohannis Legati . . . 1610' (Sayle, 5647). He brought his devices to London with him, and on his death in 1620 they passed to his son. See Nos. 166, 259, 325, 326, 329.

LEGGE (C.) to BUCK (J. and T.). c. 1626

Cantrell Legge, who was appointed printer to the University of Cambridge in 1606, is believed to have died in 1626. His printing materials apparently were taken over by John and Thomas Buck, who used his device No. 399 in 1627 and No. 264 in 1633.

LICHFIELD (J.) to LICHFIELD (L.). 1635

John Lichfield, printer to the University of Oxford, retired in 1635 and was succeeded by his son Leonard, who used his devices, Nos. 285, 336, and 408.

LOWNES (H.) to LEGATE (J.) II.

See Young (R.) to Legate (J.) II.

LOWNES (H.) to YOUNG (R.). 1625-30

In 1625 or 1626 Humphrey Lownes was joined by Robert Young, and one of Lownes's devices, No. 373, appears in a book printed about this date with Young's imprint (cf. also No. 278). On the other hand one that certainly belonged to Young, as it bears his initials, was used by Lownes in 1627 (No. 404). It is therefore probable that during the partnership the devices of both were used indifferently. Lownes died in or before June 1630, and most of his devices and signed compartments, some of which were formerly Denham's (see Nos. 119, 231), are afterwards found in the possession of Young. Nos. 150 and 296, which had probably passed through the hands of Lownes but are not known to have been used by him, are also found in Young's possession.

MARSHE (T.) to MIDDLETON (H.).

1566-75

Compartment No. 111, which had apparently belonged in turn to John King

and Thomas Marshe, seems to have been owned by Henry Middleton in 1575, but there is no evidence as to the date of transfer. Marshe printed until 1587.

MARSHE (T.) to ORWIN (T.). 1591

Thomas Marshe printed a large number of books up to 1584, and at least one appeared with his name as printer in 1587. In the last few years of his life, however, most of his business was carried on by his son Henry as his assign. Henry Marshe seems only to have printed until 1587, and is last heard of in 1589. Towards the end of 1591 the representatives of Thomas Marshe transferred a large number of his copyrights to Thomas Orwin (Arber, ii. 586-7), and part or all of his printing material was probably transferred at the same time, for we find Orwin using Marshe's compartment No. 154 in 1591, and a device of his, No. 180, in 1592. No. 167, which was used by Orwin's successor Felix Kingston in 1599, probably also passed through Orwin's hands, but is not known to have been used by him.

MATHEWES (A.) to PARSONS (M.). c. 1635

About 1635 the printing-house of Augustine Mathewes passed into the hands of Marmaduke Parsons. He is found using Mathewes's devices Nos. 304 and 312, in 1639.

MIDDLETON (H.) to NEWBERY (R.).

See Newbery (R.) to Middleton (H.).

MIDDLETON (H.) to OKES (N.). 1587-1609

On Henry Middleton's death in 1587-8 his material passed to Robert Robinson and from him to Richard Bradock, who printed

until 1615. One device or ornament of his, however, No. 215, seems to have passed to Nicholas Okes by 1609. How it came into his hands is not clear. It may be noted that in 1612 Okes used a compartment, No. 182, which also does not seem to have belonged to him. It is possible that, like Norton, he had a habit of putting his name as printer on books really printed for him.

MIDDLETON (H.) to ROBINSON (R.). 1588

Henry Middleton died between July 1587 and July 1588. In 1588 his widow sold his printing materials to Robert Robinson, who is found using his device No. 207 in 1589, and No. 202 in 1591.

? MIDDLETON (W.) to KING (J.).

See Petit (T.) to King (J.).

MIDDLETON (W.) to POWELL (W.). 1547

William Middleton died in June 1547, leaving his property to his wife Elizabeth, who, as Mr. Duff says, 'testified her sorrow by marrying, within two months, another printer, William Powell.' We find Powell using Middleton's compartment, No. 106, in 1547.

MILLER (G.) to BADGER (R.).

See Field (R.) to Miller (G.) and Badger (R.).

MILLER (G.) to MILLER (A.). 1646

George Miller, printer 1601-46, died in the latter year and was succeeded by his son Abraham, who used several of his devices, originally Vautrollier's. See Nos. 164, 233, 246.

NEWBERY (R.) to BUCK (T.) and DANIEL (R.). 1587-1634

A device, No. 240, used by Ralph Newbery in 1586-7 is found in 1634 in a book with the imprint 'apud' T. Buck and R. Daniel, Cambridge. It is not definitely stated that it was printed at Cambridge, and we therefore cannot be certain in whose possession the block was at the time.

NEWBERY (R.) to MIDDLETON (H.).

1577-8

The relations between Ralph Newbery and Henry Middleton are somewhat puzzling. In 1577-8 Middleton seems to have taken over from Newbery the Lost Sheep device, No. 153, which had formerly belonged to Wykes, and about the same time to have obtained two smaller blocks of the same design, Nos. 202, 207, which I have not yet found in earlier use. The largest and smallest of these continued in Middleton's possession, but the middle-sized one, No. 202, appears to pass backward and forward between Newbery and Middleton in a most perplexing manner. I cannot offer any satisfactory explanation of this.

NORTON (J.) to W. (T.). ? 1645

This John Norton printed from 1621 to 1645. Nothing seems to be known as to what became of his printing material on his death in 1645, but one of his devices, No. 267, is later found in the hands of 'T. W.' (? Thomas Warren, who printed in Foster Lane ? 1638-? 1661).

NORTON (W.) to NORTON (B.). 1594

William Norton died at the end of 1593, and his son Bonham was admitted as a free-

man of the Stationers' Company, and succeeded to his business, in 1594. He used his father's device, No. 174, in 1596.

OKES (J.) to WILSON (W.). c. 1644

John Okes died about 1643, and his widow seems to have carried on the business for a year or two. Later she perhaps sold the printing materials to William Wilson, who is found in 1648 using an ornament, No. 381, that had originally belonged to John Okes's father Nicholas.

OKES (N.) to OKES (J.). c. 1636

Nicholas Okes is last heard of in 1636, and at about that date his business passed to his son John, who had been associated with him for some years previously. His ornament, No. 381, was used by John Okes in 1640.

ORWIN (T.) to ORWIN (JOAN) to KINGSTON (F.). 1597

Thomas Orwin died before 25th June 1593, and was succeeded by his widow Joan. She used his device No. 273, with his initials in 1594, and without them in 1595-7. In that year she made over the business to her son by an earlier marriage, Felix Kingston. He continued to use device No. 273, and also made use of two which had formerly belonged to Thomas Marshe, one of which, No. 180, had been used by Orwin, while the other, No. 167, had perhaps passed through Orwin's hands, though it does not seem to be used in any book of his.

PEPWELL (H.) to TREVERIS (P.). c. 1521

Henry Pepwell printed at the sign of the Trinity in St. Paul's Churchyard from 1518 to 1521, after which date he seems

to have traded principally as a stationer, though a grammar of 1523 is stated to have been printed by him. Possibly he disposed of part of his printing material in 1521, for we find a border of his, No. 48, used by Peter Treveris in 1522.

PETIT (T.) [? to MIDDLETON (W.)] to KING (J.). 1547-60

Thomas Petit printed from 1536 to 1554. Parts of one of his compartments, No. 86, are found in an undated edition of Froissart, which purports to have been printed by William Middleton, and must therefore date from before June 1547, when Middleton died. It seems unlikely that Petit should have disposed of this compartment, which included his mark, and it may be questioned whether the volume was not partly printed by Petit, or finished by him after Middleton's death. The compartment later (1560) came into the hands of John King, but, as nothing is known of his connection with either Petit or Middleton, it is impossible to say when or how the change of ownership occurred.

POWELL (T.) to JAGGARD (W.). 1563-1614.

Thomas Powell, who succeeded his uncle, Thomas Berthelet, at the Lucrece in Fleet Street in 1555, only printed until 1563, when the house seems to have passed into the hands of Ralph Newbery, who gives 'the late shop of Tho. Barthelet' as his address in that year. The sign of Lucrece was, however, abandoned, and there seems no evidence that Powell's printing material passed with the house, though it may well have done so. A border, No. 133, used by Powell in 1556-62, is found in the possession of William Jaggard

in 1614, but I have been unable to trace it between these dates.

PURSLOWE (G.) to PURSLOWE (ELIZ.).

c. 1632

George Purslowe died about 1632, and was succeeded by his widow Elizabeth, who used his device No. 311 in 1633. She was apparently succeeded by Haviland, Young, and Fletcher in partnership (Arber, iii. 701).

PYNSON (R.) to REDMAN (R.). 1530

Richard Pynson died early in 1530, and was succeeded in the same year at the sign of St. George, in Fleet Street, by Robert Redman, who used his device No. 3 in 1530, and Nos. 41 and 44 in 1532.

RASTELL (W.) to GIBSON (T.). ? 1534-5

William Rastell only printed in the years 1530-4, after which date he may have dispersed his printing material. One of his compartments, No. 62, is used by Thomas Gibson in 1539. There seems no other sign of any connection between the two men, but as Gibson's first book appeared in 1535, it seems not impossible that he succeeded to Rastell's business.

READ (R.) to ELD (G.).

See Simson (G.) to Read (R.).

REDMAN (R.) to PICKERING or REDMAN (ELIZ.). 1540

Robert Redman died between 21st Oct. and 4th Nov. 1540, and was succeeded by his widow, Elizabeth Pickering. She carried on the business for a short time until her marriage to Ralph Cholmondeley, when the printing office passed to William Middleton. She used Robert Redman's device No. 3 about 1541.

REYNES (J.) to SMITH (H.).
See Gibson (T.) to Reynes (J.).

ROBERTS (J.) to JAGGARD (W.). ? 1606

In the year 1606 William Jaggard seems to have taken over the printing business of James Roberts, in Barbican, though Roberts perhaps retained some interest in it till 1615, when he transferred certain copies to Jaggard (Arber, iii. 575). Roberts's device No. 136 (originally Hall's) was used by Jaggard in 1617, and his No. 112 (originally Baldwin's) probably also passed through Jaggard's hands, as it was afterwards used by T. Cotes, Isaac Jaggard's successor.

? ROBERTS (J.) to PURFOOT (T.).

1599-1605

Device No. 136, used by James Roberts in 1599, appears in 1605 in a book which has Purfoot's device No. 344 on the title. It seems unlikely that it should have ever been in the hands of Purfoot, and possibly the book was a joint production of the two men.

? ROBERTS (J.) to WRIGHT (J.) or WINDET (J.).

See Wolfe (J.) to Roberts (J.).

ROBINSON (R.) to BRADOCK (R.). 1597-8

Robert Robinson died in or about 1597, and his widow married Richard Bradock, who took over his business and printing materials. We find Bradock using Robinson's device No. 207 in 1598, and No. 202 in 1607. Device No. 280, which he used in 1598, may perhaps also have passed through Robinson's hands.

ROSS (J.) to WALDEGRAVE (R.). 1590

John Ross, printer in Edinburgh, died in 1580. One of his devices, No. 189, may have been used in 1582 by Henry Charteris, but this seems very doubtful. Robert Waldegrave, who had been obliged to leave England in 1589, arrived in Edinburgh at the end of that year or early in 1590, and in the latter year was appointed King's Printer. He probably purchased some of Ross's materials from his widow or son, for we find him using Ross's devices, Nos. 187 and 189, in the year 1590 and later.

SCARLET (T.) to ROBINSON (R.). 1596-7

Thomas Scarlet died in 1596. His copyrights were transferred to Cuthbert Burby, and there seems some reason to think that his business was bought by Ralph Blower and George Shaw (*Dictionary I*, p. 236; Arber, iii. 702). We find, however, his device, No. 280, in the possession of R.R., presumably Robert Robinson, in 1597, and later in that of Richard Bradock, who married Robinson's widow.

SCOLAR (J.) to KYRFOTH (C.). 1518-19

The Oxford printer, John Scolar, ceased to work there in 1518. He appears to have been immediately succeeded by Charles Kyrfoth, who worked at the same address and in the single book which he produced, dated 5 Feb. 1519, used Scolar's device, No. 43.

SERES (W.) to DENHAM (H.). ? 1577

William Seres continued to print until about 1577, but in 1574 made over his patent for certain books to Henry Denham. Part of his materials probably passed to

Denham at the same time. He used them at first as Seres's assign, and in later books as his own. See compartment No. 148.

SERLE (R.) to CHARLEWOOD (J.). 1566-78

Richard Serle is last heard of in 1566, when he was working at the Half Eagle and Key in Fleet Lane. In 1578 John Charlewood was printing at the same sign in Barbican, and we may conjecture that he obtained possession of Serle's device, No. 136, on account of its representing his sign. I can discover no other connection between the two men.

SHORT (P.) to ALLDE (E.). 1599-1615

One compartment, originally Bynne-man's, No. 230, used in 1595-9 by Short, seems in 1615 to have been in the possession of Edward Allde.

SHORT (P.) to LOWNES (H.). 1604

Peter Short, who, with Richard Yardley, had succeeded to the business of Henry Denham, died in 1603. His widow carried on his business for a short time, and then in 1604 married Humphrey Lownes, to whom most of Short's devices passed. He is found using three of these, Nos. 118, 148, 278, in 1604, and later Nos. 119, 211, 335, 366. Compartments Nos. 149 and 231 probably also reached Lownes through Short, but have not been found in Short's publications. Device 150 and the Walsingham ornament, No. 296, probably passed through Lownes' hands, but are not known to have been used by him.

SIBERCH (J.) to KAETZ (P.).

See Nos. 45, 57.

SIMMES (V.) to KINGSTON (F.). ? 1607-9

Valentine Simmes printed until about

1622, but between 1607 and 1610 appears to have produced little or nothing. It is possible that at this time he was in difficulties, as he frequently was, and the passing of an insignificant ornament of his, No. 332, to Felix Kingston in the years c. 1603-9 may be thus explained.

SIMSON (G.) [to READ (R.)] to ELD (G.).

1600-4

Gabriel Simson died in or before August 1600, and in the following year his widow married Richard Read, a printer, who succeeded to Simson's business. Read died two or three years later, and in 1604 she married another printer, George Eld, to whom the business then passed. Device No. 308, used by Simson in 1597, is used by Eld in 1606, and another, No. 320, used by Simson in 1600, was in Eld's possession in 1607.

SMITH (R.) to WOOD (W.). 1595-9

Nothing is heard of Richard Smith after 1595, but his business perhaps passed into the hands of William Wood, who used his device No. 312, in 1599, and No. 331, which bears Smith's initials, though it is not known to have been used by him, in 1601.

SNODHAM (T.) to HARPER (T.). 1625-9

Thomas Snodham died in the autumn of 1625, his widow only surviving him for a few months. His printing materials appear to have been bought by George Wood and William Lee (*Dictionary I*, p. 299; Arber, iii. 703). About this time Wood had some dealings with Thomas Harper, which became the subject of litigation. According to Mr. Plomer (*Dictionary II*, p. 91), Harper

bought the business formerly Snodham's from George Wood and William Lee in 1634, but it seems that he may have had possession of it earlier, for in 1629 he used Snodham's device No. 227.

SNOWDON (G.) to OKES (N.). ? 1607

George and Lionel Snowdon, who appear to have taken over John Harrison III's printing business by 1606, transferred it to Nicholas Okes in 1608. Possibly, however, Okes was already in possession of it, for Harrison's device No. 334 was used by him in 1607. Device No. 316, which had been used by G. Snowdon in 1606, was used by Okes in 1608(?) and 1622.

STAFFORD (S.) to PURSLOWE (G.). ? 1614

There is some mystery about the later years of Simon Stafford's career. Sir John Lambe states in one place that George Purslowe bought Stafford's business in 1614, and in a list of printers dated 1615 Stafford's name does not appear. On the other hand he seems to have been printing in 1624-6, and according to another statement of Lambe, Purslowe succeeded him about 1630. Mr. Plomer regards the latter statement as the more probable (*Dictionary I*, p. 255), but Stafford seems to have transferred his device No. 281 to Purslowe between 1609 and 1617, which accords with the former. It is possible that Stafford went out of business for a time, and later returned and worked in some form of partnership with Purslowe.

STANSBY (W.) to BISHOP (R.). 1634

William Stansby died in 1638 or early in 1639, and in March 1638/9 his widow assigned his copyrights to Richard Bishop

(Arber, iv. 458-60). According to Mr. Plomer, however, Bishop bought Stansby's business in 1634 for £700 (*Dictionary II*, p. 25; Arber, iii. 701). The transfer of printing material must have taken place in 1634-8, see No. 282. Bishop also uses Stansby's Nos. 292 and 393 in 1640.

SUTTON (H.) to PURFOOT (T.). c. 1562-81

Henry Sutton continued to print until 1563. Thomas Purfoot seems to have begun printing about 1562, though he had apparently been trading as a stationer for many years before. A border, No. 108, which had originally been Whitchurch's, then Wayland's, had apparently come into Sutton's possession, and part of it had been used by him in 1560. The whole border is used by T. Purfoot about 1581, but when he obtained it is unknown.

TOTTELL (R.) to DENHAM (H.). ? 1586

Richard Tottell is said to have been succeeded by his apprentice John Jaggard in or about 1593. In the last few years of his life, however, he printed comparatively little, and he may have got rid of some of his material. We find Henry Denham using his compartment No. 147 in 1586.

TOTTELL (R.) to GREENE (L.) or LEGGE (C.). 1554-1607

Part of a compartment, No. 91, originally R. Grafton's and used by Tottell in 1554 is found in a book printed for L. Greene at Cambridge in 1607, probably by C. Legge who had another piece of the compartment in 1613. It has not been noticed between 1554 and 1607, so we cannot say how it came into Legge's possession.

TREVERIS (P.) to BOURMAN (N.). 1532-40

The last book in which Peter Treveris' name appears was one printed for him by W. Rastell in 1532. He seems to have ceased to print in 1531, and may then have dispersed his material. A border-piece of his, No. 48, formerly Pepwell's, is found in use by Nicholas Bourman *c.* 1540.

TURNER (W.) to HALL (H.). 1644

William Turner died in 1644 and was succeeded as Printer to the University of Oxford by Henry Hall, who had been one of his apprentices. Devices No. 407 and 427 were used by Hall in 1644.

VAUTROLLIER (T.) to VAUTROLLIER (JACQUELIN) to FIELD (R.). 1588-9

Thomas Vautrollier, printer in London, 1562-84, 1586-7, and in Edinburgh 1584-6, died in July 1587. He bequeathed part of his printing material to his son Manasses, who seems however to have traded only as a stationer and bookbinder. The printing business passed to Vautrollier's widow Jacquelin, who used one of his devices, No. 192, in 1588. Within a twelvemonth of her husband's death she married his apprentice, Richard Field, to whom the business then passed. Field used Vautrollier's devices Nos. 164, 170, 179, 192, 210, 222, 246; and No. 233 also probably passed through his hands, as it is afterwards used by his successor George Miller.

WALDEGRAVE (R.) to ALLDE (E.). ? 1604

On the death of Robert Waldegrave in 1603 or 1604 some of his materials passed to East, and some (that left at Edinburgh) to Finlason. One small device, however, representing a fleur-de-lis, No. 270, used in

a book stated to be printed by him, without indication of place, in 1603, is afterwards found in the possession of Edward Allde. It may originally have been Wolfe's (see Wolfe to Waldegrave).

WALDEGRAVE (R.) to BLOWER (R.).

See Wolfe (J.) to Blower (R.).

WALDEGRAVE (R.) to EAST (T.). ? 1604

When Robert Waldegrave threw in his lot with the Martin Marprelate group, and left London in May 1588 in order to act as their printer, he evidently took part of his printing material with him. Probably, however, some of it remained in London, for two devices of his, Nos. 83 and 227, do not seem to occur between the date of his disappearance from London and his return in 1603. Waldegrave died before the end of March 1604, and of these two devices one, No. 227, is found in the possession of Thomas East in 1606 (or ? 1603), and both were afterwards owned by East's successor, Snodham.

WALDEGRAVE (R.) to FINLASON (T.).

? 1604

Having printed at Edinburgh since 1590, Waldegrave returned to London in 1603, where he died a few months later. He seems to have left most of his printing materials in Edinburgh, and they were perhaps transferred in 1604 by his widow to Thomas Finlason at the same time as she transferred his patents. We find Finlason using Waldegrave's devices, Nos. 187 and 189, originally Ross's, in 1612 and 1620 respectively.

WALLEY (J.) to CHARLEWOOD (J.).

? 1582-3

John Walley printed until 1585, dying

in the following year. An ornament of his, No. 183, is found in a book printed by John Charlewood as the assign of Tottell in 1583, but as it has Walley's mark it is possible that it was used in consequence of some partnership arrangement, and had not become Charlewood's property.

WARD (R.) to JEFFES (A.). c. 1595

Roger Ward is last heard of as a printer in 1595, when he was discovered to have set up a secret press in the Temple. In December 1595 a press and type of Abel Jeffes was seized for printing 'lewd ballads and things very offensive,' and he was imprisoned for a while. Perhaps on coming out of prison he purchased some of Ward's material to make good the loss of his own, for in 1596 we find him using Ward's device, No. 238.

WATKINS (R.) to DAWSON (T.).

See Watkins (R.) to White (W.).

WATKINS (R.) to WHITE (W.). c. 1598

Richard Watkins apparently ceased to print in 1598, when he was reduced to poor circumstances. Device No. 188 passed to William White and was used by him in 1600. Compartments Nos. 181 and 182 seem to have passed either to him or to Thomas Dawson. Device No. 165, originally Jugge's, used by White in 1599, may have come to him through Watkins (see Jugge to Watkins).

WAYLAND (J.) to DAY (J.), SUTTON (H.)
and BYNNEMAN (H.) ? 1557

John Wayland died in 1556 or 1557 leaving 'desperate debts.' It is not known what became of his printing materials, which seem to have been dispersed. A com-

partment, No. 116, originally Day's, which was used in books printed about 1557 and bearing Wayland's name, later returned to Day. Part of a border (No. 108) originally Whitchurch's, and used by Wayland in 1554, seems in 1560 to have been in the hands of Henry Sutton. Lastly, device No. 99, also Whitchurch's, which perhaps passed through the hands of Wayland though it has not been found in work bearing his name, was from 1576 to 1579 in the possession of Henry Bynneman.

WAYLAND (J.) to PURFOOT (T.).

See Sutton (H.) to Purfoot (T.).

WAYLAND (J.) to TOTTELL (R.).

See Grafton (R.) to Wayland (J.).

WHITCHURCH (E.) to BYNNEMAN (H.).

1546-76

Device No. 99, used by Whitchurch in 1546 had come by 1576 into the possession of Bynneman. See Wayland to Day, etc.

WHITCHURCH (E.) to CAWOOD (E.) and
JUGGE (R.). ? 1564

Whitchurch's material probably passed to John Wayland in 1553 (see Whitchurch to Wayland), but one compartment, No. 109, appears to have passed to Cawood and Jugge, and later to John Kingston. It is, however, possible that it was merely lent to these printers by its owner, whoever he may have been.

WHITCHURCH (E.) to POWELL (W.).

1545-52

Some time before 1552, Edward Whitchurch, who had succeeded Byddell at

Wynkyn de Worde's house in 1545 (see Byddell to Whitchurch), seems to have made over a portion of the old material to William Powell who is found using one of de Worde's border-pieces, No. 50, in that year.

WHITCHURCH (E.) to WAYLAND (J.).

1553

Edward Whitchurch, being excluded from the general pardon proclaimed at the beginning of Mary's reign, was obliged to leave his shop at the Sun in Fleet Street. He seems to have been succeeded there by John Wayland at the end of 1553. Wayland used Whitchurch's compartment No. 108 in 1554, and No. 99 perhaps also passed through his hands.

WHITE (W.) to WHITE (J.) to MATHEWES (A.).

1623

The name of William White seems to occur for the last time in Greene's *Farewell to Folly*, 1617. He was succeeded by his son John, who apparently made no use of his devices. In 1623 John White made over certain rights to Augustine Mathewes and is said to have transferred his printing-house to him in 1624. It seems possible that the transfer took place somewhat earlier, for we find Mathewes using W. White's device, No. 188 (formerly R. Watkins') in 1623. Further, device No. 238, which had belonged to Jeffes, was used by Mathewes in 1622. It seems not unlikely that this also came to him through the Whites (see Jeffes to Mathewes), though it is not known to have been used by them.

WILLIAMSON (W.) to LEGATE (J.).

? 1574-? 1617

William Williamson seems only to have

printed from 1571 to 1574, after which date he disappears. Some of his copyrights were transferred to Charlewood, but it is not known what became of his printing material. A device, No. 166, eventually fell into the hands of John Legate I (?) and II.

WINDET (J.) to STANSBY (W.).

1611

John Windet continued in business until 1611, when he assigned over his copyrights and apparently sold all his printing materials to William Stansby. Stansby used Windet's devices Nos. 282 and 292 in 1611, and later Nos. 208, 237, 243, 323.

? WOLFE (J.) to ALLDE (E.).

1599

John Wolfe's device No. 310 is found in 1599 and 1600 in books apparently printed by Edward Allde, and later passed to Elizabeth Allde. It is possible that it was never Wolfe's at all, and that the book bearing his name in which it appears in 1599 was really printed by Allde for him.

WOLFE (J.) to BLOWER (R.).

? 1601

John Wolfe died in 1601, and his printing business and stock were transferred to Adam Islip. His devices seem, however, to have been dispersed. One of them, No. 298, is found in the hands of Ralph Blower, and two others, Nos. 216 and 249, passed to a certain R.B., who may have been Blower, though this cannot be regarded as certain. In the case of No. 249 there is the difficulty that the device appears in a book purporting to have been printed by Waldegrave at Edinburgh in 1603 (see Wolfe to Waldegrave). It is not impossible that all three devices may have passed to Blower through Waldegrave, but the matter is obscure.

B B

WOLFE (J.) to ISLIP (A.). ? 1594

John Wolfe on his death in 1601 was succeeded by Adam Islip who bought his printing-house, type, and implements (Arber, iii. 700). It is possible, however, that there was some relation between these men at an earlier date, for in 1593-4 Wolfe apparently transferred to Islip his device No. 226, and before 1598 his No. 251. It is probable also that No. 263, used by Islip in 1602, was originally Wolfe's, but this may of course have come to Islip with the business. Islip's use of a fleur-de-lis, No. 268, at a time when Wolfe was using a very similar one, No. 269, and their use of the two blocks of No. 251, are perhaps also indications of a connection between the two men.

? WOLFE (J.) to ROBERTS (J.). 1601-6

One of John Wolfe's devices, No. 294, is found in 1606 in a book without printer's name which also contains device No. 283. As that device was in the possession of William Jaggard in 1615, and had originally belonged to Richard Jones, we might guess that it had passed from Roberts to Jaggard in 1606. No. 294 is, however, used in 1607 by one I. W. The only printers with these initials at work in 1606 seem to have been John Windet and John Wright. Windet had succeeded Wolfe as printer to the City of London, and another device of Wolfe's, No. 252, may possibly have passed through his hands, as it is afterwards used by his successor, W. Stansby; but it is not easy to see how No. 283 could have been in his possession, or for that matter, in Wright's, in 1606. The simplest explanation is perhaps that No. 294, as well as 283, was in Roberts' hands in 1606, and

that on the business being taken over by Jaggard he disposed of No. 294 to one of the two printers whose initials it bore. Of the two, Wright seems the most probable, as he had just commenced printing and had no device of his own.

? WOLFE (J.) to WALDEGRAVE (R.). 1601-3

Device No. 249 seems to have passed from John Wolfe to Robert Waldegrave. It appears in a book stated to have been printed by him at Edinburgh in 1603, but it is somewhat improbable that the device would make its way to Edinburgh, and it is perhaps more likely that the book was really printed in London, either by or for Waldegrave. Another device, No. 270, used in a book stated to be printed by Waldegrave in 1603, without indication of place, is very similar to one used by John Wolfe, No. 269, and may also have come from him. If so, Waldegrave may, on his return to London in 1603, have purchased these devices from Adam Islip, who is said to have bought Wolfe's printing materials on his death in 1601.

? WOLFE (J.) to WINDET (J.). ? 1601

In 1593 John Wolfe was appointed printer to the City of London in succession to Hugh Singleton. On his death in 1601 he was succeeded in this office by John Windet, but his stock and other business passed to Islip. We find an I. W. using a block of Wolfe's, No. 294, in 1607, but it seems doubtful if this is Windet (see Wolfe to Roberts). If it is, he may perhaps also have owned No. 252, which is afterwards found in the possession of his successor, Stansby.

WOLFE (R.) to WOLFE (JOAN) to BYNNEMAN (H.). 1573, 1574-5

Reyner Wolfe died in 1573. His wife Joan carried on his business for about a year, using his device No. 118 in 1574. On her death in that year a large part of Wolfe's printing material came into the hands of Henry Bynneman. He used Wolfe's two serpent devices, Nos. 118, 119, in 1575 and 1577, and one of his Tree of Charity devices, No. 97, in 1575.

WOOD (W.) to MATHEWES (A.). 1602-24

Nothing is heard of William Wood after 1602. One of his devices, No. 312, was in the hands of Augustine Mathewes in 1624, but it is impossible to say how or when he obtained it.

WORDE (W. DE) to BYDDELL (J.). 1535

Wynkyn de Worde is believed to have died early in 1535, his business at the Sun being carried on by his executors and former assistants, John Byddell and James Gaver, to whom presumably all his devices passed. Byddell, who had previously been engaged in business at another address, and had several devices of his own, seems only once to have used one of de Worde's (No. 46), which is found in a book printed by him in 1535, when he was dwelling at the sign of the Sun, *i.e.*, presumably after de Worde's death. De Worde's device No. 25, and border-piece No. 50, probably also passed through Byddell's hands.

WYER (R.) to COLWELL (T.). 1560

Robert Wyer retired from business in 1556, in which year he is said to have been succeeded by one Nicholas Wyer (Plomer, *R. Wyer*, p. 2). In 1560 the printing-

house came into the hands of Thomas Colwell, who used Wyer's device, No. 68, from about 1565.

WYKES (H.) to NEWBERY (R.). *c.* 1571

Henry Wykes was one of Thomas Berthelet's apprentices, and after his master's death in 1555 appears to have continued to occupy Berthelet's house jointly with Berthelet's nephew, Thomas Powell, and to have printed there from *c.* 1557. Berthelet's sign of Lucrece had passed to Powell, and Wykes used that of the Black Elephant or Oliphaunt. In 1563 Ralph Newbery was also dwelling in Berthelet's house, having apparently succeeded Powell there, and when Wykes ceased to print in 1571, he perhaps took over his materials. He is found using Wykes' device No. 153 in 1574 (?) and 1577.

YOUNG (R.) to ANDERSON (G.). ? 1637-8

Robert Young, who had been appointed King's Printer in Scotland in 1632, seems to have given up his Edinburgh business in 1637 or 1638, and to have sold his materials to George Anderson, who began to print there in the former year. Finlason's (originally Ross's) devices Nos. 187, 189, used by Anderson in 1638, probably reached him through Young; and Finlason's ornament No. 358, used in 1640 by Bryson, probably also passed through his hands.

YOUNG (R.) to LEGATE (J.) II. ? 1632

A combination device, No. 335, originally used by Peter Short in the *Works of Josephus*, 1602, seems to have been transferred

by Lownes or Young with the copyright of the book to John Legate II, by whom it is used in editions of 1632 and 1640 for A. Hebb.

INDEX OF DEVICES AND COMPARTMENTS ACCORDING TO SIZE

THE following index of measurements will, I think, prove the most convenient way of finding the devices and compartments here dealt with, and, what is equally important, of making sure whether a device sought for is included or not. It should, however, be remembered that the size of a print varies somewhat according to the dampness of the paper at the time of printing, and therefore if a device is not found at the measurements expected, it should be sought for some distance above and below them.¹ As explained in the note following the introduction, the measurements given are in most cases a rough average of those of a number of prints and are not necessarily those of the particular print selected for reproduction. The height is in all cases given first, and the measurements (in millimetres) are those of an enclosing rectangle.

Comp. = compartment or border. App. = Appendix (pp. 160-2).

Bracketed numbers refer to blocks cut down from their original size, to parts of compartments, or to devices mentioned in the text but not reproduced.

7 × 12. Monogram, 364.	21 × 67. Hornblowers, 295.
9 × 59. Walley's mark, 183.	21 × 108. Caxton's mark, 50.
11 × 6.5. Cawood's mark, 126.	22 × 74. Grafton's mark (91).
11 × 10.5. Crowned rose, 332.	22 × 85. J. Skot's initials, 54.
11.5 × 12. Swan, 303.	22 × 109. Pepwell's mark, 48.
11.5 × 60.5. Wyer's mark, 69.	22.5 × 108. J. Skot's initials, 51.
12.5 × 17.5. Monogram of G. F., 15.	23 × 13.5. Crowned rose, 333.
14.5 × 14. Tun and mark, 127.	23 × 23. Three cranes, 236.
15 × 14. Fleur-de-lis, 381.	24 × 24. Tun and mark, 250.
16 × 15.5. Fleur-de-lis, 235.	24 × 106. Caxton's mark, 49.
17 × 18. Two heads, 365.	24 × 112.5. Tiger's head, 323.
19 × 49. Tiger's head, 296.	24.5 × 72. Marks, H.I., I.P., 17.
19 × 68. Tiger's head, 212.	25 × 41. Ram and goat, 103.
20 × 89. A and heart, 377.	25 × 42. Shield, two keys, 373.
21 × 28. Horse's head, App. 7.	25 × 93. Henry Pepwell, 47.

¹ The difference in size between the smallest and largest print from a block may amount to five or six per cent., and in some cases, especially when the block is cracked, may be considerably more. The easiest way of using this index is probably to start with the approximate *height* of the print, and then to run the eye up and down the column of figures indicating *breadth* until a measurement is found corresponding with the one sought.

INDEX OF PRINTERS, BOOKSELLERS, ETC.

THIS index is intended to include the names of all owners, or possible owners, of the devices and compartments dealt with. It therefore gives all those whose names appear in small capitals in the body of the work, but it does not include other names appearing in an imprint in which one name is in small capitals, for such persons must be presumed to have no connection with the device. On the other hand, in the case of imprints in which no name is given in small capitals (*i.e.*, when the owner of the device used in the book is unknown or is not mentioned in the imprint), *all* names in the imprint are included, as any of the persons named *may* have owned the device.

References in heavy type are to names of probable owners, *i.e.*, generally those in small capitals in the text. References in ordinary type are to other names occurring in imprints. Thus all the devices which can *with probability* be assigned to any particular printer or bookseller should be found by turning up the references in heavy type alone.

Bracketed references are to possible owners whose names do not occur in the imprints and to certain other persons incidentally mentioned.

When the names signified by initials may be regarded as certain, references are given under the names alone.

The dates given are, with a few exceptions, taken from the *Century* and the two *Dictionaries*, and are intended to give the approximate period during which the printer or bookseller was at work. They have no reference to the dates at which he used the devices. The place of business is always London unless otherwise stated.

Pr. = printer; bk. = bookseller, stationer, or publisher.
